NEW STRATEGIES IN CIVIL RIGHTS

A Forum Sponsored by the
Pennsylvania Advisory Committee to the
U.S. Commission on Civil Rights

Monday, May 5, 1986
William J. Green Federal
Building
600 Arch Street - Conference
Room 3306
Philadelphia, PA 19102

PRESENT:

MURRAY FRIEDMAN, Chairperson
Pennsylvania Advisory Committee

CARL E. SINGLEY, Member
Pennsylvania Advisory Committee

JOHN I. BINKLEY, Regional Director
Pennsylvania Advisory Committee

STEPHEN W. MAHON, Member
Pennsylvania Advisory Committee

Vincent Varallo Associates, Inc.
Registered Professional Reporters

1521 Locust Street
Philadelphia, PA-19102
(215) 561-2220

221 N. Olive Street
Media, PA 19063
(215) 565-6150

CCR

Meet.

SPEAKERS:

CARL E. SINGLEY, Member
Pennsylvania Advisory Committee

PATRICK MULLIGAN, Senior Economic Dev.
Spec., U.S. Department of Housing and
Urban Development

JOSEPH J. JAMES, Deputy Director
Philadelphia Department of Commerce

ROBERT L. WOODSON, President
National Center for Neighborhood
Enterprise

LILLER B. GREEN, Director
Ivy Leaf School.

AARON A. BOCAGE, Senior Partner
EDTEC--Education, Training and
Enterprise Center

PATRICIA A. COULTER, Director
INROADS-Philadelphia

CHARLES O'MALLEY, Special Assistant to
the Secretary, U.S. Department of
Education

DONALD F. MORABITO, Assistant Executive
Director, Pennsylvania State Education
Association

1
2 THE CHAIRPERSON: Good morning, ladies
3 and gentlemen. Let me welcome you to this Forum of the
4 Pennsylvania Advisory Committee of the U.S. Civil Rights
5 Commission. We are sparse in numbers at the moment,
6 but I expect as the day goes on that we will have a
7 larger audience, if for no other reason than we have so
8 many speakers who have to show up, presumably have to
9 show up.

10 Seriously, though, I think we have
11 important business before us, and I think that you will
12 find, if you stay around, that you'll be intrigued and
13 will find much value in some of the things that we are
14 going to be putting before you today.

15 Let me introduce myself. I am Murray
16 Friedman. In real life I am the Director of the Middle
17 Atlantic Region of the American Jewish Committee, and
18 for today, I am the Chairman of the Pennsylvania Advisory
19 Committee of the U.S. Civil Rights Commission, and we
20 have several members of the Advisory Committee here with
21 us at the table. We expect more to arrive in the course
22 of the day, but let me introduce them to you.

23 Dean Carl Singley of Temple is a member
24 of the Advisory Committee who will be doing double duty

1
2 today as a presenter of the first item on the agenda
3 today, which I believe you all have in front of you.

4 John Binkley is the Regional Director of
5 the U.S. Civil Rights Commission, which means that he
6 serves as the primary staff arm of the Civil Rights
7 Commission in a number of states. I'm not sure exactly
8 how many, but I know it includes Delaware and perhaps
9 one or two other states.

10 Steve Mahon is a member of the Advisory
11 Committee. He's from Pittsburgh and works for Westing-
12 house, and is in charge of the Equal Employment
13 Opportunity section, more or less?

14 STEPHEN MAHON: Correct, more. More and
15 more. Correct.

16 THE CHAIRPERSON: More and more of
17 Westinghouse. Tino Kolapy is another member of the
18 staff, and we have a court reporter here.

19 Let me just say a word about that,
20 because we're into some very virgin territory here today,
21 and it is important that we establish a record, because
22 the entire purpose of these -- of this Forum is to try
23 to open up some discussion and some new ideas in a
24 field of work that many of us have been associated with

1
2 for a long period of time, and to some degree has grown
3 a bit stale in terms of the way in which we try to do
4 Civil Rights business in the United States today.

5 Let me speak a little bit personally, and
6 I think also, it reflects members of our Advisory
7 Committee, both those who are here and those who are not
8 yet here or will not be here. Most of us have been very
9 closely connected with the world of Civil Rights for a
10 long period of time. I myself began my career in the
11 south as a young Civil Rights worker several months
12 after the Brown decision, and found myself harassed and
13 ultimately driven from the south by those who did not
14 agree with this kind of activity. And I could go down
15 the line with members of our Civil Rights Advisory
16 Committee; Carl Singley as a young activist; Steve Mahon;
17 John Binkley. A member of our Advisory Committee is
18 Morris Milgram who is the leading figure in integrated
19 housing.

20 We are, I think all of us, very proud of
21 our involvement in the Civil Rights struggle over the
22 years, and believe that we help to make the country a
23 bit more whole again, and some of us carry some scars of
24 those battles in one form or another. So that we do not

1
2 intend, despite whatever you might read in the newspapers
3 about the Civil Rights Commission and its leadership,
4 etcetera, certainly in this particular wing of it here,
5 is not prepared to let this country go backward in its
6 prejudice and its responsibilities in this arena. I
7 don't think there's any hesitation in saying that for
8 the members of this Advisory Committee.

9 Having said that, we cannot help but be
10 aware that many members of minority groups have not
11 been able to take advantage of the American dream, even
12 with the relaxation to some degree of the barriers that
13 have stood in the way of realizing full civil rights,
14 full equal rights and opportunities. Indeed, in some
15 respects, the situation has grown worse. I think it's
16 safe to say that while considerable numbers of minority
17 people, women, have entered the mainstream of American
18 life, huge numbers, and I believe it's safe to say
19 growing numbers, have not; growing numbers have not.

20 This raises the question of whether
21 traditional Civil Rights solutions, useful as they have
22 been, are sufficient to move us into the next stage of
23 the Civil Rights revolution. I want to underline that,
24 whether traditional Civil Rights solutions that we've

1
2 all grown up with, those of us who have put some gray
3 hair on our heads, can carry us fully into the next
4 stage. I say this without in any way suggesting, you
5 know, that we stop any of our activities, but I raise
6 this question with you.

7 Now, in recent years, a number of ideas
8 have been projected of a kind that are not now part of
9 normal Civil Rights processes. Not all of them are new
10 ideas. Some I would characterize as old ideas that are
11 being refashioned to try to take advantage of the newer
12 situation that exists in American life today.

13 The Civil Rights Commission, as most of
14 you know, is not an action body. If you have a complaint
15 on discrimination, you visit Lea Gaskins' wife, and
16 you file a complaint and there will be investigations
17 and action as amply demonstrated in the good work that
18 she and others do, whether it be the State Human Rela-
19 tions Commission, Federal Equal Opportunities Commission,
20 etcetera.

21 The role of the Civil Rights Commission,
22 if I understand it correctly, has traditionally been as
23 a kind of think tank for Civil Rights in the United
24 States. It has played an important role -- don't ever

1
2 minimize the importance that ideas play in shaping
3 people's behavior and shaping strategies and tactics.
4 It has played an enormous useful role down through the
5 years in the development of strategies. Certainly in
6 the Sixties it had shaped much of the way in which
7 government has proceeded -- I don't mean to minimize the
8 role of activists and so on, but basically we are a think
9 tank for ideas. And, so, the Pennsylvania Advisory
10 Committee, over a period of quite a number of sessions
11 and heavily influenced by both Steve and Dean Singley
12 here, emerged with a program that is in front of you
13 today, to take a look at some of these new ideas, if
14 you will.

15 We will be listening in the course of
16 the day to a number of people, most of whom are not
17 yet here, who will be laying out some of these ideas,
18 and if you will look at your program, they have fallen
19 into three categories. Where the idea is particularly
20 controversial, such as on the issue of vouchers for
21 the poor, we have provided a debate. In other words,
22 we're not backing anything at the moment. We are trying
23 to open up discussion on some of these ideas so that,
24 as I say, where the issue is controversial or we

1
2 reasonably believe it to be controversial, we are
3 presenting both sides.

4 Our purpose is to encourage community
5 discussion through the media, and I'm pleased to note
6 that a representative of the Philadelphia Inquirer is
7 here covering the Forum. We hope to encourage community
8 discussion in this way. And most importantly I think,
9 through our court reporter and the proceedings, we
10 expect to present the findings, the ideas, the materials
11 that will emerge during this day to the U.S. Civil
12 Rights Commission in Washington. It is my belief
13 personally that the Commission should be finding serious
14 new ways to be doing Civil Rights business in the last
15 half of the 1980's. I want to underline, it should be
16 positive ways, and with this in mind, we are going to
17 proceed.

18 Just a couple of announcements to make
19 here. I've already mentioned that we have a court
20 reporter who will be taking down what we will be dealing
21 with here. We also have a very distant guest here from
22 Australia, Mr. Hookey of the Australian Human Relations
23 Commission, so that you can see that we are being
24 observed from afar.

1
2 What are you doing here?

3 MR. HOOKEY: Well, Mr. Chairman, I'm
4 visiting the United States and a number of other
5 countries to study two things: In human rights and
6 anti-discrimination bodies, the relationships between
7 lawyers and other professionals, and secondly, the
8 relationship between head offices and district offices
9 in such bodies. And I'm particularly pleased to be
10 here today.

11 THE CHAIRPERSON: Thank you very much.
12 You couldn't come to a better city. This is a city that
13 has pioneered on all levels -- weren't we, Lea, the
14 first -- certainly among the very first local city
15 commissions on human relations?

16 LEA GASKINS: We're the only ones amended
17 by City charter.

18 THE CHAIRPERSON: Yes. You're very, very
19 early in.

20 LEA GASKINS: Yes.

21 THE CHAIRPERSON: And much of the early
22 Civil Rights legislation that was developed was developed
23 on city and state levels here, so you're in the right
24 place.

1
2 MR. HOOKEY: That's why I came.

3 THE CHAIRPERSON: All right. Now, I'm
4 going to introduce Dean Carl Singley, an old friend as
5 well as a colleague on many fronts. Dean Singley, as
6 most of you know, is in charge of the law school at
7 Temple University and has been counsel for the recent
8 hearings on the MOVE tragedy in Philadelphia. He has a
9 long and distinguished record in the field of Civil
10 Rights both as a student activist and as a mature adult.

11 Carl will attempt to give us an overview
12 of the evolution of the Civil Rights struggle, as I
13 understand it, and the title of his remarks is "Strategic
14 Paradigms --" I think you ought to do something about
15 that Paradigms business.

16 CARL SINGLEY: I will. I'll explain it.

17 THE CHAIRPERSON: "Strategic Paradigms
18 in the Black Experience".

19 Carl?

20 CARL SINGLEY: To the gentleman from
21 Australia, I should tell you that I'm first and foremost
22 a lawyer, and I guess one legitimate question that one
23 might ask is what is a lawyer doing talking about Civil
24 Rights issues, and the answer is, if you give a lawyer

1
2 an opportunity to talk, he'll take it, especially in
3 those areas in which he or she is called upon to talk
4 about those things about which they know very little,
5 and this is no exception.

6 I will talk for just a few minutes about
7 the topic, because Murray is right, academics have a
8 way of trying to title their speeches or writings with
9 high-faluting sounding phrases, and this, again, is no
10 exception.

11 I was struck by two things that I saw in
12 the media this morning that I think in a way captures
13 the essence of my presentation by the way I change my
14 thrust. Since the last time we talked, I decided that
15 I wanted to talk about something a little bit different,
16 but I will talk about paradigms, but with particular
17 emphasis on what I'm calling the power of politics
18 paradigms, which seems to be the most influential approach
19 to Civil Rights that's influencing our thinking right
20 now.

21 I saw on the Today show a review, sort of
22 a retrospect of about ten minutes on the freedom rides,
23 and the Montgomery to Selma marches, and there was
24 Julian Bond as if Julian has been here forever. He

1 sounds the same, as articulate as usual, but he's
2 getting older. In addition, they had the mayor of
3 Selma, Alabama on that television program. And what
4 struck me about that program, they were looking back
5 twenty-five years at places like Selma and the south to
6 find out whether or not we have made any significant
7 progress on the Civil Rights front over those twenty-five
8 years. And that, I think, is what I would call a
9 little bit later on the direct confrontation or the
10 protest paradigm that was often used as a strategy by
11 us during the struggle.
12

13 And then, on the front page of the
14 Philadelphia Inquirer, there is an article on the
15 failures of the city's minority Set-Aside Program. And
16 I have to tell you, as a person in the city government
17 who at the beginning stages had some involvement in
18 that process, whether or not the account is accurate,
19 and I suspect that it probably is, I have to tell you
20 that I was deeply disappointed. Today is the second of
21 a two-part series, and the most favorable thing that
22 you can say about that article is that in some respects
23 the program is simply not doing what it was designed to
24 do. I mention that, because that's the result of a

second strategy that we've employed in our history in this country, and that is what I've called the law reform or Civil Rights strategy, and that is an effort to improve the conditions of minorities through legal strategies.

Just a word before I get into the basic outline about this notion of paradigms. About twenty years ago a historian by the name of Thomas Coon wrote a book called "The Structure of Scientific Revolution". And in that book, Mr. Coon, who was a historian and whose emphasis as to the history of science developed the idea of a paradigm, and by paradigm, he meant essentially a cluster or setup prospectus that were widely shared by people who were in a given field or fields of study. For example, I would assume that at one point in time virtually most people in academic circles believed that the world was flat, and so that was the dominant paradigm, that most people who essentially did research and simply accepted as real and as correct that prospectus about physical or scientific phenomenon.

Essentially, then, a paradigm is a cluster of ideas around which there are people who believe very

1
2 strongly in the correctness of those ideas. The problem
3 is that these paradigms tend over time to change as new
4 ideas come onto the scene and people test out the full
5 range and parameters of an old paradigm. The older
6 paradigm shifts and a new paradigm comes in. So, I have
7 essentially adapted the notion of paradigms in looking
8 at the experience of black Americans in this country over
9 the last 200 years. And in so doing, I have concluded
10 that we have gone through four, and we are perhaps right
11 now in what you might call the preparadigm stage for a
12 fifth approach to solving our problems.

13 The first paradigm or strategic paradigm
14 is what you might call accommodation and conciliation,
15 and that was basically the approach that we adopted
16 through much of our history in this country up until
17 about the turn of this last century. And perhaps the
18 most well known spokesperson for the idea of accommoda-
19 tion and conciliation was Booker T. Washington. And
20 if you recall, in the militant Sixties, we used to call
21 him an Uncle Tom, and if you recall, basically, what
22 Booker Washington was suggesting was that you had to get
23 along. I mean, while the country was oppressive, lynchings
24 were commonplace, the rights of minorities, blacks in

1
2 particular, were violated in a wholesale way, and his
3 philosophy was basically that we have to be conciliatory
4 and we have to make accommodations to the political
5 reality within which he found himself.

6 If you recall, he gave a speech in 1896
7 in Atlanta at the Atlanta Exposition in which he
8 suggested that blacks cast down your buckets where you
9 are. He felt that we could be as separate as the
10 fingers on one hand and yet unified. I think his
11 approach was to suggest to white people that we don't
12 want to marry your daughters, we don't want to live in
13 your neighborhood, we don't want to be close friends of
14 yours; we simply want to have some of the good life that
15 America has to offer. And he was criticized during that
16 time by what I like to call the Harvard boys, W. E.
17 DeBoise and William Michael Trotter, who were radicals
18 of the day and who felt that his approach was not one
19 that was destined to improve the conditions of blacks
20 in this country, but ultimately, to maintain blacks in
21 a position of disadvantage.

22 So, that was basically what I would like
23 to call the accommodation and conciliation strategic
24 paradigm. Again you have a lot of folks -- Booker

1 Washington, in spite of what you might have been led to
2 believe, really was the foremost black leader of his
3 day, and he wrote substantial speeches. And basically,
4 if you wanted to get some of the money from the northern
5 foundations in the south, you had to go through Booker
6 T. Washington. That's the answer.

8 So, I think it is safe to say that up un-
9 til about the beginning of this past century, the
10 dominant approach to Civil Rights was the accommodation
11 and conciliation approach.

12 Now, when you talk about a paradigm as
13 being dominant, I'm not suggesting that there were not
14 other competing paradigms. In fact, at the very same
15 time that Booker T. Washington was advocating that we
16 be conciliatory in our approach, he was secretly funding
17 the various litigation efforts that were going on in
18 the south to improve the conditions of minorities,
19 which leads me to the second paradigm, what I'm calling
20 the law reform or Civil Rights paradigm.

21 Really, the heyday for the second
22 approach was during the Thirties, Forties, Fifties and
23 Sixties. And the essential thrust of this approach was
24 that we could gain the right and the advantages and full

1
2 equality through litigation. And so, you have the
3 professional school desegregation cases and the public
4 school desegregation cases culminating in Brown versus
5 The Board of Education as a clear example of this
6 particular paradigm.

7 In addition, you have various Civil
8 Rights legislation passed during this time and various
9 programs such as Set-Aside legislation and Affirmative
10 Action programs and the like that were the result of
11 this law reform Civil Rights strategy.

12 The third paradigm or strategy was what
13 I call the direct confrontation or protest strategy,
14 and it had many dimensions to it. For example, in --
15 one example, for example, would be the riots of the
16 Sixties. 1965 was a clear example of the Watts riot
17 and then, subsequently riots in New York, Detroit and
18 other major cities. That was a strategy; not always a
19 planned strategy. In fact, the riots by definition were
20 spontaneous. It was thought that there were Civil Rights
21 leaders who were sympathetically trying to make use of
22 this unrest and dissatisfaction, but direct confrontation
23 had on one end the kind of violent reaction of people in
24 urban areas to their disadvantaged conditions and on the

1 other end, you had the freedom rides, the sit-ins, the
2 bus boycotts and the like. And that is what you might
3 call the direct confrontation and protest paradigm.
4 Interestingly enough, you will notice that those parti-
5 cular strategies that were developed and refined by
6 black Americans are now being used with a significant
7 amount of success by other minority groups as well.
8

9 And the fourth paradigm, and the one
10 that I consider to be the dominant paradigm for the
11 late Seventies and early Eighties is what I would like
12 to call the power politics paradigm, and I'll have a lot
13 to say about that in a moment.

14 So, essentially, we have had four basic
15 approaches to the issue of Civil Rights and full equality
16 for black Americans; accommodation and conciliation.
17 There's very little of that, by the way, right now,
18 although there's some that might advocate that the
19 national political climate is such that black Americans
20 better be quiet for awhile. I doubt if that will take
21 hold ever again.

22 Secondly, the direct confrontation and
23 protest approach is seldom used. Probably, the only
24 example of it I would think would be the series of

1
2 demonstrations at the South African Embassy, as an
3 example, and maybe some of the approaches taken by
4 college students on campuses in an effort to encourage
5 divestment of holdings in South Africa. But I think
6 it's safe to say that as a strategy, the direct confron-
7 tation, particularly the protest approach, are not
8 widely used by black Americans right now.

9 The law reform Civil Rights strategy is
10 not used as widely. In fact, my point about the Set-
11 Aside legislation and the difficulty that it appears to
12 be having in the City of Philadelphia at least is
13 causing some of us to have some reservations about the
14 ability or the value of that strategy as an ultimate
15 solution. I'm not giving up as a lawyer. I have to
16 believe that ultimately the law is going to be a solu-
17 tion to many of these social problems. But I have to
18 tell you that at this point in time, I do have some
19 reservations.

20 And, then, finally, the one that I'd like
21 to talk about for the remainder of my time is what is
22 called the power politics strategy. As many of you
23 know, Jessie Jackson's race for the presidency in 1984
24 is the clearest example of what that strategy is all

about.

There is a fifth strategy, and I think we're in the preparadigm stage for this fifth approach, and I think that's what you might call the economic self-determination approach. Increasingly, black political leaders and black leaders from across the spectrum are beginning to talk about economic independence and economic self-sufficiency. So, you hear it from people as diverse as Bill Gray, as Louis Farakhan, as the National Conference of Black Mayors, in which the suggestion seems to be that politics as a strategy is simply a means to economic development and economic independence.

Now, I hope what you've concluded in each one of these things is first of all that what I've done is not terribly original. And as is true of what most academics do, very little in the way of ideas is original under the sun, so that our hope is that rather than coming up with new ideas, that we can bring new insight or new twists or at least some currency into old ideas.

But if you look at the writings of Garvey, for example, if you look at the writings of Booker

1 Washington, again, you will see that a very major
2 component of their philosophies was the notion of
3 economic development and economic independence. So that
4 in effect what I see us doing is coming almost full
5 circle in some ways in that there's a lot of talk now
6 about economic independence, and I think long-deserved,
7 because I don't think a people is going to get any
8 respect unless it can provide economically and otherwise
9 for themselves and for their own communities.
10

11 So, let's talk then about the current
12 approach which I've called the power politics. By the
13 way, all five of these paradigms or strategic paradigms
14 have the same basic sets of goals, and you might suggest
15 that the macro goals were integration, which is what
16 we have been working for for the last several hundred
17 years in this country. And for a period of time, at
18 least, there was some talk about separatism. Marcus
19 Garvey was a believer in it and then Black Muslims in
20 the early Sixties and middle Sixties thought that it
21 was really a futile quest to try to fully integrate black
22 Americans in the mainstream of American society, so it
23 would indeed be more desirable then to separate and
24 form a separate nation. And you had something even

1
2 called the Republic of New Africa based in Detroit,
3 headed by a lawyer and his brother that thought that
4 maybe several states in Mississippi could be dedicated
5 to black Americans.

6 But it's safe to say that the approach
7 right now seems to be almost exclusively one of integra-
8 tion, that very few people in very few organizations
9 and very few serious intellectuals are seriously advocat-
10 ing the notion of black separatism any longer.

11 Again, the objectives of all of these
12 strategies have been basically the same. We've had the
13 basic goal of integration and then, we've had a series
14 of macro goals then described as things like full
15 equality, equal access. Black pride was a phrase that
16 we used. Black power was another phrase that we used.
17 And the problem with all of those objectives of the
18 movement is that we don't know whether or not we've
19 achieved them. It's as if when you looked at an episode
20 of the Jefferson's, when the maid first found out that
21 George Jefferson really had this penthouse apartment,
22 she said, "Why didn't somebody tell me that we had
23 arrived," and exactly when we arrived is something that's
24 hard to know. Have we arrived because Temple University

1
2 has a black dean, when there is one black dean in a
3 white law school out of 177? Some would point to a
4 Carl Singley and say, "We have arrived." Yet, there is
5 only one black dean out of 177 law schools in the
6 country.

7 When you get a black astronaut, when you
8 get a black Miss America, not one but two black Miss
9 Americas in one year. Have we arrived when you have
10 black mayors who run the major cities throughout the
11 country when in fact the black Americans in those
12 cities are in poverty that's in many ways worse than
13 twenty years ago? So, in any event, the suggestion is
14 that we have to continue to think about different
15 approaches to our problems, yet understanding that the
16 problems continue to be deeply rooted in our community,
17 and we have to continue to push for a dialogue in our
18 community to explore different ways.

19 Now, quickly, if I can sort of go through
20 this power politics, which is really the issue that I
21 am very much interested in, because I am fearful that
22 we don't appreciate the limitations of this approach.
23 Right now, we are sort of in the heyday of the power
24 politics approach in the urban cities, and I don't think

1
2 that enough black people are looking at the limitations
3 and the shortcomings of this approach in the longrun.

4 There are several factors that gave rise
5 to this power politics approach. One is the conservative
6 political shift in the country. Whether folks know it
7 or not, Republicans have been elected in four of the
8 last five national elections, and some would say that
9 the election of a Democrat was really a fluke, a
10 Watergate-related fluke. Whether that's true or not,
11 political scientists and others can make that determina-
12 tion. But the reality is, perhaps, that there has been
13 a shift over the last twenty-five years in the political
14 mood in this country, and that shift has been largely
15 in a more conservative direction.

16 At the same time, we have had increased
17 black political participation in numbers that are
18 unprecedented in this society. In addition, people
19 have basically been frustrated with the protest actions
20 and the Civil Rights strategies, and felt that politics
21 was likely to be a much more useful way of advancing
22 black interests than the traditional strategies that
23 were utilized in the past.

24 And there are several assumptions that

1 underlie this power politics strategy. The first one,
2 and again, they're assumptions because they haven't been
3 tested, and I have my reservations about the validity
4 of some of these assumptions, but one is that in the
5 black community there is a unity of interest, and that
6 black Americans can be counted on to act according to
7 that unity of interest.

8
9 A second assumption is that the one
10 asset to be found in the black community is the raw
11 numbers and that there is significance in the number of
12 black voters who can be garnered and galvanized to vote
13 on behalf of a candidate or to vote against a candidate
14 or to not vote at all. And I think the election of
15 black mayors gives some truth to that assumption.

16 A third assumption is what you might call
17 the reward and punishment thesis. The hope is that
18 blacks can punish those politicians who do not advance
19 our interests or we can reward those who do. I'm not
20 sure that that happens at all.

21 And, finally, an important assumption of
22 this approach is the assumption that political power
23 ultimately leads to economic power. So, it's not
24 unusual to hear that minority Americans, blacks in

1
2 particular, in major cities where the key elective
3 offices are controlled by black people are asking why is
4 it that the economic conditions of the black middle
5 class and the black lower class have not been improved
6 given the fact that we now have the significant politi-
7 cal power. So, the underlying assumption is that
8 black political power can indeed be converted into
9 black economic power. Obviously, what you have to do
10 is put a big question mark behind that assumption.

11 Booker Washington, in that speech, talked
12 about casting down your buckets where you are. I'm
13 going to take that phrase and use it in the context of
14 power politics. I would like to suggest that black
15 Americans should not be discouraged by the fact that
16 ninety percent of black Americans voted against President
17 Reagan, ninety percent of those folks voted against
18 President Reagan. No other group in this society voted
19 in such a lopsided fashion. No other ethnic, religious,
20 racial group voted in the same kind of numbers. Seventy
21 to thirty, I believe it was. I want to look at ninety
22 for you, because Murray suggested the Jews did, but the
23 distribution was seventy to thirty. No other group
24 voted in such overwhelming numbers against Reagan and

1
2 for Walter Mondale. Now, I think, to take Bob Woodson's
3 phrase -- Bob you'll hear from a little later -- that
4 means that either black Americans are the brightest
5 folks in the country who saw something that the rest of
6 the country didn't see, or we are the dumbest. Now,
7 you have to decide that.

8 The one reality, though, is when you
9 vote in those kinds of numbers against a person who
10 wins, then that person feels no obligation to you at
11 all.

12 Now, I would say a lot of black Americans
13 walked away from 1984 very much discouraged. First of
14 all, a lot of people voted for Jessie and we placed a
15 lot of our hopes and aspirations in one man and in one
16 strategy; and in some ways, the one party, the Democra-
17 tic Party. We said they mistreated Jessie at the
18 convention in San Francisco. We voted ninety percent
19 for Walter Mondale, and he lost by one of the largest
20 vote margins in recent history.

21 Now, rather than being discouraged by
22 that, what we should do is cast out our buckets where
23 we are; that is to say, our strength in the black
24 community will be in the urban areas, in the cities and

1
2 in the state elections. So, rather than worrying about
3 whether or not we can shape and influence national
4 elections, we ought to worry about shaping and influenc-
5 ing local and state elections. For example, Reagan's
6 election had an interesting impact on the Democrats and
7 the Republicans. The Republicans walked away from that
8 as arrogant as possible, because for the first time, they
9 had explicitly tested the thesis that no president would
10 be elected without significant black votes. And as a
11 consequence, what they did in a way that was less subtle
12 than Nixon's so-called southern strategy, they said,
13 let's see if we can win without these black people, and
14 they did. They won well without black people. So, one
15 consequence is that the Republicans walked away smiling
16 and arrogant and in a way, suggesting that maybe if they
17 are concerned about the issues of black Americans, it's
18 only because they're concerned about how history will
19 view Reagan's presidency rather than a sense of obliga-
20 tion to black Americans.

21 The Democrats, on the other hand, are
22 walking around bewildered and confused. They have an
23 identify crisis of major proportions. They don't know
24 what they want to be. They are in a hopeless and a

1 hapless quest for new faces and new ideas. They had two
2 meetings within the last week; one in Washington of the
3 new direction Democrats, and one in Atlanta of the you
4 have to be red, white and blue in the south in order to
5 be elected. Now, I think the Democrats are trying to
6 figure out what role black Americans will play in the
7 future, because we are what you call in the Democratic
8 Party special interest, and there's a belief that the
9 only party that can be elected nationally is a party
10 that can move straight to the center. So that my pre-
11 diction is in 1988 you will not be able to tell a
12 Democrat from a Republican. They will look alike,
13 talk alike and sound alike, and for black Americans,
14 that's not going to leave us very much in the way of
15 choice. I think we are probably being perceived as more
16 dispensible to the national cause than probably some
17 other groups.

18
19 Now, why am I talking about this? We
20 ought to say the hell with those parties. That's my
21 suggestion, and that should be the core of this new
22 power politics strategy.

23 Reagan believes in decentralizing policy-
24 making from the federal government and allocating

1 essential policy-making to the state and local govern-
2 ments. That is a boom. That's a wonderful opportunity
3 for black elected officials and black Americans.
4 Here's an opportunity to shape and influence policy-
5 making at the local level. That's not what the President
6 intended, but the reality is, rather than being dis-
7 couraged by the defeat in 1984 and others, we should
8 take advantage, and in a sense, cast down our political
9 buckets where we are.
10

11 I think that there are some limitations
12 to this new power politics strategy. One is that poli-
13 tics is only one source of urban political power, and
14 it is as if we think if you get the political power,
15 you have the rest of the power. That's simply not true.

16 Another limitation is the fragmented and
17 unpredictable nature of American politics. It is
18 incremental as a rule, and in some ways, the change
19 that takes place is incremental. Black elected
20 officials, though, who are the beneficiaries of this
21 paradigm are confronted with several challenges. One,
22 they have to educate all voters to the economic and
23 political realities of political life. Wilson Goode,
24 Tom Bradley, Andrew Young, Harvey Gant in Charlotte,

1
2 North Carolina, Coleman, Young and the others, they
3 have to use the same limited revenue base to deal with
4 the serious problems that their predecessors had to
5 deal with. It's not as if when blacks get elected,
6 they get new money. They have to either get it from
7 taxes or through government subsidies of one kind or
8 another. So that what our black politicians have to
9 do is, they have to educate all of the voters to that
10 reality, black and white as well.

11 A very difficult challenge is to manage
12 black voter expectations. After being out of power for
13 many, many years, once we elect black elected officials,
14 we expect things to change overnight, when in fact,
15 they simply cannot change overnight. And, then, there
16 is always a concern about the so-called white backlash,
17 so that black politicians have to be very, very careful,
18 and they are often reticent to take positions that might
19 in a sense trigger the so-called white voter backlash.
20 Think about the reaction of the Northeast. Some would
21 say to the election or at least the attempted election
22 of Bobby Williams, some say it was a result of a Demo-
23 cratic city committee that was in shambles; others
24 suggested that it was simply a backlash to the increasing

1 black political influence in the City of Philadelphia.

2
3 Another challenge that the elected
4 officials and black folks who embrace the power of
5 politics approach have to confront is racism. Now, the
6 question is, is America as racist as it was twenty-five
7 years ago, or is it less so. Is racism the major factor
8 contributing to black disadvantage or is it less signi-
9 ficant. Is race declining by comparison? I don't know
10 the answer to any of those questions, but I can tell
11 you this: There is racism in entrenched non-political
12 institutions that shape and influence the ability of
13 black elected officials to function. There is racism
14 in the media and its portrayal of black elected
15 officials. There is racism in police departments and
16 unions, and in businesses in the corporate communities,
17 and black elected officials have to confront that reality
18 when they get the reins of power.

19 And, another challenge to black elected
20 officials is in gaining control of those effective --
21 what I will call the effective instruments of power; the
22 boards and commissions, and the advisory bodies that
23 don't have a residency requirement, like the City
24 Planning Commission, the Philadelphia Industrial

1
2 Development Corporation, the Philadelphia Agency for
3 Industrial Development and the like, the Urban Affairs
4 Partnership, the Philadelphia First Corporation. These
5 institutions are non-political institutions, but wield
6 tremendous influence over the destiny of this city. So
7 black people who believe that you simply elect black
8 people to office and you have a solution really mis-
9 understand the true nature of power in an urban area.

10 And very quickly, they confront, in
11 addition to those things, they confront the problems
12 that all elected officials confront in urban cities,
13 deteriorating urban structures, population shifts and
14 decline, an eroding revenue base, "Don't raise my taxes,"
15 the flight of businesses and jobs from the cities to
16 the suburbs and to the sunbelt, and crime which is ever
17 present. So that you have a situation where black
18 elected officials have to decide whether or not it is
19 safe to be tough on crime. Especially now, there should
20 not be a dilemma. I think a black elected official
21 could be very comfortably tough on crime given the fact
22 that black communities and minority communities tend as
23 a rule to be primary victims of much of the urban crime,
24 but then, that's one of the dilemmas that a black elected

1 official confronts. The abandonment of the public
2 schools by whites and by middle class blacks who are
3 the beneficiaries of all of these strategic paradigms,
4 myself included; the deterioration of the housing stock
5 in the urban areas. I mean, it's not as if once we
6 gain the power, we have the ability to build an unlimited
7 number of houses. So that I make, as a part of this
8 paradigm, some suggestions. I think that black leader-
9 ship is in transition as a part of this power politic
10 paradigm. So that we need, and as Murray talked about
11 it a little earlier, we need to have more debate. We
12 need now the kind of debates that they used to have at
13 the turn of the century between DuBoise and Booker
14 Washington. Those debates were crucibles of leadership
15 for many of the political leaders that followed them.
16 And we need to rekindle the debate over some of the
17 following issues: We need to talk very candidly about
18 the plight of the black poor in this country. We have
19 to be prepared to talk in an open way about the causes,
20 and it's not enough, folks, to say it's racism and
21 finish the discussion. It's much more than racism.
22 For example, Julian Bond, about a year and a half ago,
23 appeared on television in an effort to criticize the
24

1 President's spending cuts, said that Ronald Reagan is
2 killing black babies. Now, that might -- I'm sure that
3 there's some logic to that argument, but I think that
4 we're entitled to get from Julian Bond a much more
5 sophisticated analysis of how the cuts in domestic
6 spending impact on black infant mortality. I think we
7 have a right to have a public discussion about that.

8
9 Somebody suggested that Mr. Reagan
10 certainly could not be responsible for the unwed teenage
11 pregnancy that seems to be a serious problem. In fact
12 -- well, he's not responsible for very many pregnancies,
13 I will say that.

14 What else we need to do is, we need to
15 talk about the limits of this power politics approach,
16 that there are really some limits to this strategy, and
17 we have to decide when we've reached the limits to using
18 power politics as a dominant strategy. It is one of
19 currency right now. We are using it in all of the major
20 cities where we have numbers. You pay a price, and
21 there's a risk attached to power politics as the approach.
22 We have to systematically link politics to economics,
23 and we need to talk about how best to do that. Is the
24 best way to do it by having black elected officials

1
2 advocate minority Set-Aside programs, for example, or
3 Affirmative Action programs? Is that the best way to
4 link political power to economic power? We should dis-
5 cuss that and have more dialogue on it. We need views
6 from across the spectrum in the black community as a
7 part of this debate, not simply coming from politicians
8 or law teachers or the like, but from people from all
9 walks in life in the community who have ideas and per-
10 spectives about the plight of black Americans. And I
11 think, as you will see from the rest of today, there
12 will be different spokespersons from different organiza-
13 tions who will have different ideas as part of this
14 dialogue.

15 The point is, we really do need to rekin-
16 dle this dialogue that I think is missing. We have to
17 reject the notion that the problems of the black
18 community are monolithic. They simply aren't, but there
19 are different strata in the black community with
20 different problems, and the solutions to those problems
21 may be different; that is, the problems of the black poor
22 in Philadelphia may be different than the black poor in
23 a small town in Mississippi, and we need to think in
24 terms of regional approaches and regional agendas and

regional strategies.

And, also, as a part of that debate, we need to reject ideological labels; that is, I'm not sure that it makes much sense for black Americans to get into a thing about calling somebody liberal or moderate or conservative or neo-conservative. I'm not sure that those labels adequately describe our people. Whether you're talking about Tom Sole, for example, or Walter Williams or Willy Wilson from the University of Chicago on the one hand, or Benjamin Hooks or John Jacobs or Julian Bond or Jessie Jackson or Louis Farracon, I don't know whether it makes much sense at all in our community to get caught up into this business of ideological labels if the effect of that labeling is to truncate the discussions that ought to be taking place.

Now, what ought to happen is that people from across the spectrum ought to be encouraged to present their ideas, and if we don't like them, we ought to reject them. But they should have an opportunity to present those ideas in an open forum in which an effort is made to talk about the diversity of problems that our community confronts.

I also think, as a part of that rejecting

1 of ideological labels, I think that black Americans
2 ought to reject party labels as well; that is, Linden
3 LaRouche, for example, figured out a way to make a
4 mockery out of a party label in Chicago in the State of
5 Illinois by electing people from a -- who call themselves
6 new Democrats. I think we should have some discussion
7 about whether it makes sense for blacks who are not
8 members of -- who are not elected officials to be
9 members of any political party at all, but simply to
10 vote their interest, depending on who the candidate is
11 and what ideas that candidate advocates.

13 I think that this idea, this last idea
14 that I'm suggesting about disregarding ideological
15 labels in the dialogue and rejecting the notion that
16 party labels have any significance at all in terms of
17 thinking about black problems, that rests on the idea
18 that virtually every one of these black people that
19 I've alluded to and other black leaders basically
20 support the same ideas in terms of advancing the
21 conditions of black Americans. The differences are
22 really over strategies, and I don't see why we can't
23 differ over the best possible strategies, but if this
24 notion of independence that I'm advocating is really

1 significant and if it's going to work, then we need a
2 way to educate black voters in terms of how it works.
3 They do it in some small places. They split the tickets
4 during general elections, so that they vote for some
5 Republicans and they vote for some Democrats, and they
6 vote for independents. Blacks in Philadelphia have a
7 long tradition of independence of that kind, and not
8 simply in Charlie Bowser's race, not simply in Lucian
9 Blackwell's race, but dating back over 100 years, black
10 Philadelphians have been independent and willing to
11 consider approaching politics from an independent
12 standpoint.
13

14 I think this power politics strategy is
15 only going to work as long as no party assumes that it
16 can take black voters for granted; that is to say, you
17 have to move us. You have to come to us and show us
18 why we should support you, and you can't do it simply
19 by saying your daddy was a Democrat and his daddy was a
20 Democrat and we all ought to be Democrats.

21 Now, I think that what we also need in
22 our community is we need some research organizations.
23 What I'm talking about is something not unlike the
24 Joint Center for Political Studies in Washington, but I

1 think we need them on a regional basis, because much of
2 the social policy formulation and many of the discussions
3 that are taking place about social policy right now are
4 being dominated by groups like the Manhattan Institute
5 and the Heritage Foundation. In fact, one of the most
6 influential books in the Reagan administration is a
7 book called "Losing Ground" by Charles Murray who is
8 based at the Manhattan Institute. And Mr. Murray
9 basically develops a fairly eloquent argument that the
10 great society programs and the social spending programs
11 of the last two decades have been unsuccessful, to be
12 charitable. And I understand that the key leaders of
13 the Reagan administration read that book, accept its
14 major premises, and are using that book and others as
15 a justification for the major spending cuts.

16
17 So, that's on one extreme. You have
18 ideas being generated from the more conservative ideas
19 industry on the one extreme, and then, on the other
20 extreme, you have the ideas industry that's dominated
21 pretty much by the liberal and the traditional Civil
22 Rights organizations. And I'm suggesting that that's
23 not necessarily good as well or any better, because if
24 the effect is to continue to promote ideas and

1
2 strategies that we know are unworkable or have no chance
3 at all of succeeding given the current political climate,
4 then we need to think about these problems in a very
5 different way.

6 Now, I want to underscore that point,
7 because I think it's important. It's not enough for us
8 to criticize the policy proposals of the more conserva-
9 tive organizations, but we need to ask hard questions
10 as well about the policy proposals and recommendations
11 of the more liberal ideas organizations. If the effect
12 is that they are advocating programs that we have found
13 simply don't work, or they are pushing ideas that simply
14 have no chance of being adopted given the current
15 political climate, and I think that as a part of this
16 power politics strategy, that we have to see America as
17 it is right now, rather than how we would like to see
18 it in the future or being nostalgic, remembering the
19 good old days of the Civil Rights movement. The only
20 America that matters is this America, and we have to get
21 it developed in ideas industry that's prepared to look
22 at strategies and approaches to Civil Rights that factor
23 in these current realities.

24 And I think that those organizations, and

1
2 I think they ought to be based in universities and
3 places like Temple, for example, and other universities
4 in the area, but the thought really is that there should
5 be a partnership, then, between those people who are the
6 practitioners of the power politics strategy; that is
7 to say, those black elected officials, and black
8 intellectual leaders; that is, they should come to
9 those leaders, if we can find them, to seek ideas and
10 proposals that have some reasonable chance of dealing
11 with the serious problems that confront black Americans.

12 I think we have to clarify through
13 these research organizations the real issues that ought
14 to concern us. I really think that we've spent too much
15 time in public discourse talking about Affirmative
16 Action programs; not that I don't that they're important.
17 They're exceedingly important, but if you think about
18 it, those Affirmative Action programs that we are going
19 to fight to the death to preserve no matter what the
20 failings appear to be, those programs have not signifi-
21 cantly improved the conditions of the masses of the
22 poor -- of black poor in America. That is the reality.
23 The beneficiaries of this new voter strength and the
24 beneficiaries of those Affirmative Action programs have

1
2 been essentially middle class blacks who had an oppor-
3 tunity to take advantage of those situations created,
4 and the black politicians have been the beneficiaries
5 of this new political awareness that we find in the
6 black community. So, we need to talk not simply about
7 Set-Aside and Affirmative Action, and indeed, apartheid
8 in South Africa, which is probably the greatest human
9 tragedy of our time. But after all of the public dis-
10 course, after all of the public debate over these two
11 trend issues, the reality is that black Americans are
12 trapped in ongoing, self-perpetuating cycles of poverty
13 and despair. So, in this public discourse, we need to
14 get beyond the trend issues, and these institutes need
15 to help us figure out what we ought to be talking about.

16 A couple of more points. In order to do
17 this, all of this is supposed to be connected, because
18 I have an outline so it means it's connected, in order
19 to do this, we have to expand the black leadership base.
20 We cannot rely on exclusively black political leadership.
21 We are one of the few groups in this society -- if you
22 ask people, name ten black leaders right now, I bet you
23 eight of the ten would be political leaders, eight of
24 the ten. Name some black political leaders, they would

1 say eight or ten. Now, some of you may know that I gave
2 a speech in defense of the African-American Hall of Fame
3 Sculpture Garden in Fairmount Park, the forty acres
4 without the mule, and somebody said, "Singley, why don't
5 you give that speech, and do you really think that in
6 your lifetime, you will see -- vulcanize the park and
7 want to do all of those things." And my answer is, I
8 think that a monument, not necessarily that one, but a
9 monument to black achievement is really important,
10 because people have to understand that there are blacks
11 who have achieved in areas other than music, athletics
12 and in politics.
13

14 So, one of the things that we need to do
15 is expand the black leadership base beyond politicians.
16 I don't want to be critical of politicians or demean
17 them, but they have conflicting fidelities. Politicians
18 have to be elected every two or four years, and as a
19 consequence, their personal political agendas may from
20 time to time vary from the collective agendas of black
21 people. It's not that we can't trust them; it's just
22 that we have unreasonable expectations. If you believe
23 that a black elected official can be counted on at all
24 times to advocate the interest of black people, they

1 simply can't, because politics, by definition, is the
2 art of compromise, and they will make those compromises
3 that are necessary for them to continue to do what it
4 is they do for a living.
5

6 So, we need more than just politicians
7 in the base. We need to force some strategic alliances
8 across the spectrum of leadership organizations in the
9 black community. Any organization that's advocating an
10 idea that has the potential of improving the conditions
11 of black Americans ought to be an idea worth considering.
12 So, nobody should be excluded from this effort simply
13 because we may not like them.

14 If this power politics strategy or para-
15 digm is to work, I think we need to do several things.
16 We have to build and develop coalitions with other
17 groups. We can't do it by ourselves. Our numbers are
18 simply not that strong, and for black Americans who --
19 you know, if you live in these urban areas, it's easy to
20 believe that black Americans represent a significant
21 number of people, but take a ride up to Wilkes-Barre, for
22 example, just get in your car and go up to Wilkes-Barre,
23 or drive across the country the way I did with my family
24 a couple of years ago, and you will be shocked at just

1
2 how insignificant numerically minority, and blacks in
3 particular, are in this great melting pot. So the
4 reality is that for this power politics strategy to work,
5 we have to continue to build coalitions and develop those
6 coalitions, revitalize the old black/Jewish coalition.
7 And it doesn't have to be an ethnic coalition necessarily.
8 It can be a coalition of interest.

9 I think we have to talk about developing
10 desirable leadership attributes. We shouldn't protect
11 and defend our leaders just because they are our
12 leaders. We have to tell them when they are wrong and
13 when they make mistakes, and if they are incorrigible,
14 we have to reject them, which is a part of encouraging
15 constructive criticism of leadership, so we probably
16 ought to cut the politicians out of this dialogue or
17 the would be politicians, those guys who want the
18 person's job. We shouldn't let that person talk at all,
19 but those people who have cushy tenured positions at
20 universities who wouldn't give them up for politics,
21 and listen to those people.

22 I think, in order for this power politics
23 strategy to work, we have to monitor the ebb and flow of
24 the political tide. We have to look realistically at

1 what's happening on the political scene locally and
2 nationally, and understand those trends and factor those
3 trends into whatever our strategic considerations are.
4 We can't be using strategies from the Sixties, political
5 strategies from the Sixties in the 1980's. They simply
6 won't work. It's silly and it's foolhardy to do that..

7 I have three more points. He wants to
8 ask me questions. He wants to debate.

9 The leadership has to be non-sentimental.
10 You know, I don't think people should be locking hands
11 and singing we shall overcome. We did that. That's
12 fine. It's nice. Sing it to your kids, but I just
13 think that what we need from our leaders are we need
14 principled, pragmatic, hard-nosed, non-sentimental
15 leadership, and we're not getting enough of that.

16 And, finally, we need to get in these
17 leaders for the strategy to work, a vision that looks
18 beyond the limitations of the present to the opportuni-
19 ties of the future.

20 Thank you.

21 (Applause.)

22 THE CHAIRPERSON: That really was a
23 magnificent address, Carl, and a very brave and very
24

1
2 forward-looking address, and I congratulate you on that.

3 We have about an hour and a half for
4 the next portion of the program, and I thought I would
5 cheat a little bit and permit a little bit of question-
6 ing or comments on that rather extraordinary statement,
7 Carl, and so, can I beg your forbearance for a few
8 moments? I think there will be time enough, because
9 there are only two of you on for that next hour and a
10 half.

11 Incidentally, before you begin, why don't
12 you identify yourself.

13 ROBERT DEE: My name is Robert Dee and
14 I represent the Anti-Defamation League.

15 I agree with just everything you say.
16 Would it be possible to have a copy of your speech that
17 I can circulate at least to my executive board of my
18 organization?

19 CARL SINGLEY: In fact, if I can sit
20 down at my computer and really write it out, it will
21 come out in the next issue of the State of Black Phila-
22 delphia, the Urban League's publication.

23 Any more questions or comments?

24 THE CHAIRPERSON: Yes, I have one. I was

1 fascinated by your four or five paradigms, the concilia-
2 tion motto, the militancy motto. Several people I've
3 been looking at most recently, in fact, as recent as
4 last night, I was listening to Julius Lester, and I've
5 just finished reading a book called "Jessie Jackson and
6 the Politics of Race". And they are suggesting that
7 another paradigm has emerged, and that is elements of
8 the black community spearheaded perhaps by Jessie Jackson
9 are developing a concept of a separate black nation.
10 Mr. Farakhan, for example, is coming forward with the
11 idea of a separate economic development, usually around
12 cosmetics, for some strange reason, and that it is also
13 identifying this separate black nation that these
14 people are advocating, identifying with Third World
15 peoples around the world in a kind of anti-western mode,
16 which would, obviously, throw them against the people
17 of Wilkes-Barre and all that vast majority that you're
18 making reference to.

19
20 Is that not a force that is beginning to
21 emerge as another paradigm of black strategy?

22 CARL SINGLEY: I laughed when he men-
23 tioned Julius Lester. He wrote a book some years ago,
24 "Look out Whitey, Black Power is going to get your Momma".

1
2 Even he understands the differences in paradigms. I
3 think that's what I would call the economic self-
4 determination paradigm that I described is in the pre-
5 paradigm stage. I think there is a feeling that is
6 relatively wide-spread that one of the possible sources
7 of solutions to the problems of black Americans is to
8 be found in economic independence. There's a lot of
9 push from people across the political spectrum in that
10 direction. I'm not sure that it's the politics of race
11 necessarily, but it's a reality that there are numerous
12 communities in this country who understand in a way
13 that black Americans apparently don't fully understand
14 that one of the things you ought to do is get your
15 economic house in order, and the belief is that by the
16 development of black business, minority entrepreneurs,
17 and in one sense, you hire other minorities. Small
18 business tends to be the major employer of significant
19 numbers of people; not just in minority communities, and
20 I think the thrust of that paradigm is the development
21 of black businesses.

22 It shouldn't be a surprise that it's in
23 the cosmetic industry. Blacks probably spend a signi-
24 ficantly greater portion of their income on related

1
2 cosmetic and related beauty care products than probably
3 any other group. So that would seem to me to be a
4 natural source of economic development.

5 The question of linking with other Third
6 World countries, I'm not sure that that's as much of a
7 problem as some might think. There was some talk years
8 ago about the possibility of getting money from Arab
9 countries, for example, and other places, and the
10 reality is that -- and Joe James and others can talk
11 about it -- it is still very, very difficult for a
12 black business in this country to get major money by way
13 of loans from commercial institutions. It continues to
14 be very, very difficult.

15 And just one quick other point, one of
16 the unfortunate things about the aid programs and
17 government contract programs involving minorities is
18 that there is a level of dependency, and many, many
19 minority businesses will tell you that when they make
20 an effort to break the dependency by seeking out
21 contracts from other than the government sector, that
22 they find that those same commercial institutions that
23 were more than willing to provide them with funding as
24 long as they were on the government contract route, seemed

1 significantly reluctant to do so when those businesses
2 are trying to break away from that dependency on
3 government contracts.
4

5 THE CHAIRPERSON: Can I follow up on that
6 quickly? But if indeed the thrust is toward, let's say,
7 Third World countries, for example, Farracon's economic
8 program is based on a five million dollar loan from
9 Khadafy, that's not going to go over real strong in
10 the Wilkes-Barre, to say nothing of Philadelphia and
11 other places. If, indeed, it connects with some of the
12 revolutionary forces that are taking shape around the
13 world and then throws itself against the thrust of that
14 American foreign policy that seems to be the dominant
15 one at the moment, won't it result in a continued
16 isolation when you're invaded against?

17 CARL SINGLEY: Let me just say that five
18 million, and I don't know whether that's a correct
19 figure or not, given a multi-billion dollar economy in
20 the black community, we really are talking about a multi-
21 billion dollar economy, that that amount of money by
22 comparison is of no consequence. Its consequence, I
23 think, is its political implications and how some
24 people would draw from that all kinds of general

1
2 conclusions about the trend that this new economic
3 equity approach or this economic self-determination
4 approach is taking, I don't think is representative.
5 I think that most of the spokespeople for this new
6 paradigm really are people who are going about trying
7 to form businesses and seeking economic independence
8 through the same routes that are being taken by all
9 other Americans, and I think it's unfortunate that this
10 one incident gets the kind of prominence that it gets
11 if the effect of it is that people might be a little
12 more reluctant to support the concept. I just don't
13 think that Khadafy-Farracon link is in any way represen-
14 tative of what's happening in the diverse black business
15 communities.

16 JOHN GREEN: John Green from the Urban
17 Coalition, not to be confused with Urban League. I
18 found your comment about broadening black leadership
19 very interesting. It has been my experience that the
20 people, black, with the where-with-all; that is, the
21 financial independence, the intellect to provide that
22 leadership have been somewhat reluctant to play the role
23 for one reason or another. It seems as if black politi-
24 cians are willing to speak out to take various stands on

1
2 issues, but other blacks seem to be reluctant to do so.

3 Do you find that there is a change in
4 their attitude, upper class blacks, educated blacks,
5 professionals?

6 CARL SINGLEY: I think it's changing.
7 I think what the blacks you refer to have to remember
8 is that they are by and large beneficiaries of those
9 changes that took place in the Sixties. We got a black
10 dean at Temple. I'm the beneficiary of that; not
11 directly, but indirectly. So that people who hold
12 positions of prominence and influence and who can afford
13 to not care really do have an obligation to put their
14 intellectual and other resources on the line in order to
15 provide a solution to the problem. I don't think it's
16 happening, because it's very easy to simply not do it,
17 you know, it's very easy to just devote your time and
18 energies to improving your individual situation as
19 opposed to agonizing over someone, and it really requires
20 some agonizing. But I would hope that organizations
21 such as the Urban Coalition, not to be confused with
22 the Urban League, which strikes me as more economic
23 development oriented than the Urban League, will continue
24 to provide some leadership in that direction.

JOHN BINKLEY: If I follow you, the power politics paradigm which you're now presenting --

THE CHAIRPERSON: This is John Binkley from the Commission on Human Relations staff.

JOHN BINKLEY: Your paradigm on power politics stems from the flow of the application of laws and the legal steps, the legal reform we went through, correct?

GARL SINGLEY: I think, in part.

JOHN BINKLEY: And when we come to power politics, of course, there has to be voter registration and voting to implement that, and you seem to dwell heavily on your urban centers where there's been successful electing of urban mayors and other representatives both at the local, state and federal level, and I wonder if we could dwell a little more on the application of the voter registration and voting in, say, rural Mississippi where one congressional district that I'm familiar with, with over fifty percent black population, and I think over fifty percent black registration, have failed two times in a row to elect a black congressman. And I just wondered if you've given some thought to the broad application of that. Do you have subparadigms?

1
2 CARL SINGLEY: I'm sure they're there.
3 I think you're right. The observation is a good one
4 that I didn't mean to imply. In fact, significant
5 improvements on the voter registration side did indeed
6 take place in the south. As I heard this morning, the
7 mayor of Selma, Alabama, who is white, suggested that
8 Alabama has the highest number -- second highest number
9 of black elected officials in the country. Probably
10 the other state would be Mississippi. The likelihood
11 is that it would be Mississippi, so I think you are
12 right in the observation that one consequence of the
13 law reform paradigm was the removing obstacles, at least
14 legal obstacles to black voter registration and black
15 participation. And one consequence has been the election
16 of significant and not so significant elected officials
17 all across the south.

18 I do know of the congressional district
19 that you've talked about. That is one of those unusual
20 and interesting situations. Old habits die hard. There
21 are people who have the right to the vote and the
22 franchise, but for a whole host of social and even
23 perhaps economic reasons, have decided not to make
24 maximum use of that franchise. There was a boycott that

1
2 just ended after thirty-five days in a small Mississippi
3 town where the black population is well over fifty
4 percent, and the school district itself is ninety percent
5 white, a very small town. But they were unable to get
6 the school board to appoint a black superintendent, and
7 they had to resort, sort of, to the direct confrontation
8 approach. In spite of the numbers, voting-wise and the
9 like, they had to resort to the selective buying,
10 campaign or the economic boycott in order to get that
11 school district to appoint a black superintendent.

12 But I think that in the south that it
13 continues to be a problem in other than the major urban
14 areas. If you look at the black mayors in New Orleans,
15 Atlanta, in Birmingham, Alabama, in Charlotte, North
16 Carolina, all of which are major cities, I think it's
17 just a matter of time before a black congressman comes
18 out of Mississippi, probably the Jackson area. I think
19 it's just a matter of time before even Jackson, Missis-
20 sippi gets a black mayor.

21 THE CHAIRPERSON: A quick question now,
22 because I don't want to shortchange the next people on
23 our schedule.

24 JOHN GREEN: Just in reference to what you

1
2 just said. In forming coalitions, are we to think
3 about electing whites over blacks?

4 CARL SINGLEY: The answer is yes, but
5 that's going to require a level of security and sophis-
6 tication that I don't think we have right now. And
7 there may come a time when black voters can see that it
8 is in their interest to support a white candidate more
9 than a black candidate. That has happened in the past,
10 but not in a deliberate kind of a way, but for reasons
11 having nothing to do with advancing the interests of
12 the black community. I think that we are a somewhat
13 distance away from that before we'll feel comfortable
14 enough in our new found political strength to make that
15 as a conscious choice.

16 THE CHAIRPERSON: Thank you very much.

17 As Dean Singley has indicated, this
18 paper will be appearing in the Urban League's State of
19 Black Philadelphia, I think it's called. Do you have
20 any idea how long that will be?

21 CARL SINGLEY: A month, probably.

22 THE CHAIRPERSON: Right, so that I
23 certainly would like to reread that paper to cogitate a
24 bit more on the rather seminal ideas that are laid out

there.

The next portion of our program, as you can see from the document in front of you, is given over to a discussion of Urban Enterprise Zones: Implications for Civil Rights. I think one of the interesting aspects about the Urban Enterprise Zones and we'll hear a good deal more about it from our specialists who are here, is that it fulfills one of the ideas that Dean Singley laid before us, which is that strategies be developed that tend to bring people together across political and ideological lines, and that's the thing that interested me so much about the concept of Urban Enterprise Zones.

The figures on a national level who are most heavily identified with the Urban Enterprise Zones approach are Congressman Bob Garcia of the Bronx, who represents a heavily Puerto Rican area, Congress Jack Kemp, who has been well known and identified as a conservative Republican leader, and Congressman Bill Gray of Philadelphia.

Now, Carl, wouldn't you agree that that's an interesting combination, if it could be put together across the land, suggests some rather interesting

coalitional ideas.

In any case, we have with us today the senior economic development specialist of the U.S. Department of Housing and Urban Development by name of Patrick Mulligan who will lay out the conceptual framework, the idea itself, and then we will ask Joe James, who is the Deputy Director of the Philadelphia Department of Commerce, who, to my amazement, is running -- responsible for running three of them in Philadelphia. I didn't know until seeing Joe James that, indeed, we are in some phase of implementing an urban enterprise program. So, Mr. Mulligan, would you come forward and share your thoughts with us.

PATRICK MULLIGAN: What I thought I would do is give you a sketch of the history of enterprise zones and what has been happening. I'm not sure how familiar you are with just what has been discussed and what the debate has been and where we stand right now on enterprise zones. So, I'll confine myself to doing that and let Joe James, who has a lot of practical experience in administering enterprise zones in the city deal with the specifics.

By way of introduction, enterprise zones

1
2 is the most recent proposal by the Federal Government
3 to deal with the deterioration of cities, the disinvest-
4 ment and blight of our urban centers.

5 It is proposed by the present administra-
6 tion as an alternative to the various grants and loan
7 programs that we've seen down through the years, and
8 if you're familiar with the budget process, you'll be
9 aware that the various programs and the various funding
10 for these programs have been dwindling recently and are
11 on the list of -- many of them on the list to be termi-
12 nated.

13 You're familiar probably with the old
14 Urban Renewal Program, the more recent Community
15 Development Block Grant Program, which was the successor
16 to urban renewal, and the Urban Development Action Grant
17 Program, which was the economic development aspect of
18 our department. But you also have the Economic
19 Development Authority, the Small Business Development,
20 SBA, and their various programs. So, there are a number
21 of these that are in existence and many of them have
22 been slated for termination.

23 The Enterprise Zone Program, then, would
24 appear to be the Administration's attempt to replace

1
2 these. The basic theory behind it is that it provides
3 incentives, mostly tax relief and regulatory relief or
4 at least relaxation. The private sector, businesses,
5 would be enticed to locate in the dilapidated areas of
6 cities, thereby not only stop the blighting process,
7 but also create an economic -- a better economic
8 environment by providing jobs and improving the business
9 climate in that area.

10 Instead of relying on public funding
11 and public assistance, the basic theme of the program
12 would be to rely on private investment, and hopefully,
13 by providing the incentives that they've discussed, that
14 the private sector would be encouraged to respond to
15 things like lesser taxation and lesser regulation from
16 government.

17 While the idea of enterprise zones of
18 that approach is not new, various versions of it have
19 been tried, not only in this country, but in other
20 countries as well. It is only recently that it has
21 been developed as an organized plan and focused on
22 certain areas as a means of recovery.

23 The history is relatively young, there-
24 fore, starting as is presently proposed in about 1980.

1 As a matter of fact, it was one of the proposals of
2 the campaign of President Reagan. And it was adopted
3 from a program that has been tried in the United
4 Kingdom. It was established there in 1978 and at
5 present, I think Britain -- between Britain and Northern
6 Ireland, there are about fifteen enterprise zones in
7 the United Kingdom and with apparent success. It was
8 introduced in Congress in 1980 by, as you mentioned,
9 a coalition of Congressmen Kemp and Garcia. Subsequent
10 bills were introduced by various congressmen, among
11 them Congressman Watkins, one by Congressman Coyne from
12 our area, and also by Senator Danforth in the Senate;
13 again, by Congressmen Kemp and Garcia in 1981. They
14 again introduced a revised version of their bill.

15
16 The first bill from the administration
17 was introduced by Kemp and Garcia again in 1982. It was
18 introduced in the Senate by Senator Chaffey. It was
19 generally similar to the previous proposals and the
20 basic ideas would be these; It would be available only
21 to distressed cities, simply meaning that the city
22 would have to meet certain standards of distress which
23 they presently meet for purposes of participating in
24 the Urban Development Action Plan Program, which would

1 be most cities in the country. Twenty percent of an
2 area that would be selected for an enterprise zone would
3 have to be at or below the poverty level. Generally,
4 all bills have a population cap of various sizes on the
5 areas to be chosen. In addition, seventy percent would
6 have to be -- seventy percent of the population would
7 have to be at incomes less than the median income.
8 Businesses would have to provide most of their services
9 in the area and have at least ninety percent of the
10 tangible assets in the area.
11

12 The proposal would be for, initially,
13 twenty-five zones per year for three years, which would
14 be a total of seventy-five zones in a three-year period.
15 There would be no direct aid from the Federal Government.
16 There would be no direct grants or loans. That's just
17 not a piece of the legislation. That is a basic theory
18 of the program, that if it's going to work, it's going
19 to work because the private sector is interested enough
20 in making it work.

21 The capital gains tax would be totally
22 eliminated for businesses locating in the area. Invest-
23 ment tax credits for depreciation of property and for
24 construction would be provided. Varying percentages of

1
2 tax credits for wages paid to qualified employees and
3 for the numbers of employees employed by those businesses
4 would be provided as well.

5 So, there are varying degrees of relief,
6 tax relief proposed and not too much information on the
7 regulatory relief, except that certain regulations would
8 be preserved that were not proposed initially to be,
9 but things like equal opportunity, that type of regula-
10 tion would be preserved as it now exists.

11 The bill was passed in 1983 by the
12 Senate, but no action was taken by the House. In 1984,
13 there were no hearings. The bill was again introduced
14 by Senator Dole in August of '84, but once again, no
15 action was taken on it. Senator Hart, in the meantime,
16 introduced a similar type bill and mentioned that he
17 would not limit the number of zones to seventy-five; he
18 would have a much larger number. The bill was not
19 introduced in '85, and mainly because -- and it's fair
20 to say that the whole idea of Federal enterprise zone
21 legislation is somewhat stalled because of the problems
22 in balancing the budget and in getting tax reform.
23 And it's probably safe to say also that until there are
24 substantial resolutions of those problems, that the bill

1
2 may not get bipartisan support or votes. It does seem
3 to have support in theory, but until the problems of the
4 taxes, the budget balancing and tax reform are solved
5 or at least substantially solved, it doesn't appear that
6 there will be any movement on it.

7 Just last month in April, Senator Regan
8 introduced an enterprise zone bill that is similar to
9 the administration bill now in existence.

10 So, there's been considerable and
11 continues to be considerable effort on the part of the
12 administration and Congress to pass an enterprise zone
13 law. In the process, there has been considerable debate
14 pro and con. That may be one of the better things that
15 has come out of what has gone on.

16 The strong argument in favor of enter-
17 prise zones, of course, is that it will allow the
18 private sector to do what it should be doing anyhow, to
19 get involved in the renewal of the areas that are
20 considered dilapidated and that are -- that so much
21 disinvestment has taken place in. It won't cost the
22 government anything in the form of direct funding, so
23 that will be a reduction on the need to provide revenue
24 as is now being done, and also, hopefully, it will be

possible to eliminate some of the existing programs if the enterprise zones are successful.

It's seen as a fresh start to an unsolved problem. The local control of the program, the adaptability of it to local conditions is seen as a strong argument in its favor. Tax relief is considered to be one of the more successful ways of encouraging business to locate and to expand in any area. Tax credits will ensure the necessary capital will be available.

Some of the arguments opposing it are that tax incentives are marginally valuable and may not be sufficient to counteract the cost and the difficulties of locating in distressed areas of cities. Also, one of the strong arguments against it is that it may result in the relocation of jobs into these areas to take advantage of the benefits, rather than the creation of new jobs by new construction or expansion. An argument against it is that it will create unfair advantage for new businesses in the zone over existing businesses or businesses in the adjacent areas and likewise, for workers, because it would theoretically -- there would be some tax relief for the people who would

1
2 be employed in the new businesses; also the fact that
3 relatively few areas, at least in the administration's
4 present proposal, would get enterprise zones or would
5 be assisted is seen as an argument against it.

6 Its opponents also claim that it will
7 cost the government revenue, and, of course, it will,
8 and also, that existing tax benefits would reduce the
9 incentives to go into zones; that businesses have
10 sufficient tax incentives right now to locate anywhere,
11 rather than going to a zone with the additional benefits
12 to be provided.

13 Because of the continuing debate and
14 the lack of movement on the part of the Federal Govern-
15 ment, and we do not have at this time an enterprise zone
16 program, the states have gone ahead and taken action to
17 do the same thing. They've taken matters into their
18 own hands. At the latest count, thirty states have
19 enterprise zone programs. Most of them have been
20 legislated. It may have been that the states got on
21 the bandwagon at the early stages of the federal debate
22 in order to be ready when federal legislation was passed,
23 but in any case, the state program has kind of taken on
24 a life of its own, and from all of the reports that we

1
2 receive, and my department has been trying to track the
3 success of the state zones, they seem to be quite
4 successful.

5 While they vary widely, the different
6 versions of enterprise zones in different states, most
7 of them have the basic theory of the enterprise zone
8 program. Most of them target a limited number of zones
9 and have some population limitation and also, a competi-
10 tive process for selection, and the selection criteria
11 generally measures distress, unemployment, poverty level,
12 that type of thing in the area. They are providing a
13 range of incentives, some of them fairly generous; some
14 of them not too generous. The number of zones in states
15 varies considerably, from, I think, six or seven in
16 Connecticut, to over two hundred in Louisiana.

17 The programs as they exist are being run
18 by the state agency, the existing state agencies, with
19 very limited staff. The program in Pennsylvania was
20 not legislated. It was initiated by administrative
21 decree, I believe, but it is, nevertheless, as effective
22 and apparently as successful as most of the other state
23 programs.

24 Most of the states consider the enterprise

1 zone program to be one of the more important economic
2 development initiatives in recent years, and in many
3 cases, the most successful. It appears that the very
4 creation of the zone or zones has focused attention
5 on the specific problems of those particular areas and
6 the needs, and has focused the energy of the local
7 government on doing something about those areas, and
8 that seems to be the major reason why they are success-
9 ful, but there may be a lesson there in itself.

11 The zones that, from our perspective,
12 that appear to be most successful, are those that have
13 been marketed the most strongly. The zones that local
14 government have developed a good analysis of and done a
15 good marketing program on seem to be the ones that are
16 the most successful.

17 In our region, which is the five-state
18 region, Pennsylvania, Virginia, West Virginia, Maryland,
19 Delaware and the District of Columbia, all of them,
20 except West Virginia, have enterprise zones. Now, West
21 Virginia feels that it has similar legislation on a
22 state level that will encourage business to do what
23 enterprise zones are encouraging them to do. Delaware
24 is not specifically enterprise zone legislation, but it

1
2 does have a Blue Collar Jobs Act that it claims does
3 the same thing.

4 So, overall, all of the states in the
5 region have some form of enterprise zone initiative.

6 In Pennsylvania, and Joe can speak to
7 this more specifically, there is no tax relief provided.
8 What the State of Pennsylvania has done is provide
9 planning grants and assistance grants to different types
10 of zones, so that they may initiate revolving loan
11 funds and that type of thing to plan and help the
12 businesses get started. They also have a policy of
13 providing a percentage of the resources of the state
14 targeting them to the zones; such things as site
15 development grants, heater loans, Pennsylvania capital
16 loan fund programs, and also the Pennsylvania Minority
17 Business Development Authority loans. So, what the
18 state has done is to say, we want to make sure that where
19 there are enterprise zones, a percentage of the resources
20 of the state are focused or targeted towards that zone.
21 Joe can give you some idea how that works.

22 Also, the state is available and makes
23 available its staff to provide technical assistance.

24 From the point of view of Civil Rights,

1 from my observations and from what I've read, there has
2 not been any debate or any mention of Civil Rights
3 specifically as far as the zones are concerned. It is
4 obviously conceivable that because zones will be
5 operating in the areas of most distress and for that
6 reason, quite often in areas where there is a concentra-
7 tion of minority residences, that it will have -- could
8 have either a beneficial or a negative effect on their
9 rights depending on how it's operated. But, specifically,
10 there has been no debate that I am aware of on how it
11 may affect the Civil Rights of the residents in those
12 areas.
13

14 THE CHAIRPERSON: Joe?

15 JOSEPH JAMES: Good morning, ladies and
16 gentlemen. I'd like to first thank Murray for the
17 opportunity to speak with you this morning. I must
18 admit that the idea of connecting enterprise zones with
19 new strategies in Civil Rights and connecting that to
20 the United States Commission on Civil Rights has been
21 an interesting one for me, but I believe there are some
22 connections that are both of benefit to those of us who
23 run these kinds of programs and to the communities that
24 we're concerned about preserving and increasing

1 opportunities for.

2
3 As Murray indicated, I'm Deputy Director
4 of Philadelphia's Department of Commerce, and I have
5 responsibility for overseeing the enterprize zone pro-
6 gram and other neighborhood economic development initia-
7 tives that the City gets involved in.

8 I'm particularly pleased this morning
9 because one of the Civil Rights efforts that I believe
10 Martin Luther King was involved in, certainly as he
11 approached his demise, was the one relating to economics
12 and increasing and empowering the economic ability of
13 the minority community in this country. And, in fact,
14 without economic means, many of the Civil Rights
15 opportunities that are created are simply not available
16 in a real sense.

17 But the City's efforts to revitalize older
18 industrial neighborhoods are concentrated in the American
19 Street corridor, Hunting Park West, West Parkside.
20 These are three parts of the City of Philadelphia.
21 These three areas have been designated and jointly
22 funded as enterprise zones by the City and State, and
23 contain over seven hundred businesses providing
24 employment for over thirty thousand people. They are

1 located in Philadelphia's neighborhoods. American Street
2 and Hunting Park are in North Philadelphia. West
3 Parkside is in West Philadelphia. A variety of business
4 and community development programs designed to enhance
5 the economy of these areas has resulted in about thirty
6 million dollars in new investment and the creation and
7 retention of nearly forty-eight hundred jobs in 1984
8 and 1985 combined.
9

10 By the way, the programs that we have
11 operating there are really geared to existing firms,
12 to maintaining the firms that are located in these
13 neighborhoods, and I hope I say this more than once
14 today; when you talk about having the ability to
15 effect whether or not you can have a job, some of that
16 has to do with whether or not the job is located close
17 to you, close to your neighborhood where you or your
18 neighborhood association can have some influence over
19 whether or not local people get hired. And I'm going
20 to talk some about partnerships or coalitions that are
21 formed between the business community and the residen-
22 tial community in these areas where they're finding
23 that they have some common goals that concern the
24 quality of life, crime, security, encouraging not only

1
2 investment and business opportunities, expanding
3 businesses, but also improving the residential climate
4 and other quality of life factors.

5 Such jobs in Philadelphia that are close
6 to people who need jobs is more than just a symbolic
7 statement. It's important to have some ability to
8 influence the employer, encourage the employer to hire
9 people from the area. Certainly, if you live in an
10 area where there are no jobs, it's much more difficult
11 to extend that influence. I always talk about the
12 efforts of the City in the past were given the very
13 similar benefits applied to businesses across the city;
14 in effect, we were encouraging some firms to move out
15 of the more distressed areas to move into areas of the
16 city that were not as distressed, and in many cases,
17 not adjacent to locations of which people who needed
18 jobs lived in.

19 The primary goal of the enterprise zone
20 program is to provide and manage resources to support
21 the retention, and creation of jobs in these zones.
22 A strong linkage, as I mentioned earlier, is created
23 between the business and residential community, and we
24 employ something called a Business Service Center, which

1
2 is a combination of business and community people serving
3 on the board who provide assistance to businesses in the
4 area, help strengthen the business association,
5 strengthen that entity that the community can then work
6 with and deal with in order to encourage job placements.
7 And also, one of the components of the Service Center
8 is a job bank which reaches into the community to find
9 who needs employment, what their skills are, what skills
10 they lack in some cases, make referrals for job training
11 and other kinds of assistance that can be provided to
12 them, and then make the ultimate connection to a real
13 private sector job in that neighborhood where that's
14 possible.

15 This Business Service Center also works
16 very much on the quality of life issue within the zone.
17 I have brought with me copies of my presentation this
18 morning, and on the second page, there is some demo-
19 graphic information about each of the three zones. The
20 point that I want to stress is that each of the zones
21 in Philadelphia, a high proportion of the residents are
22 low and moderate income individuals. A very high
23 proportion between forty-six and eighty-eight or eighty-
24 nine percent are minority individuals. In fact, it's a

1
2 very important factor to the minority community in
3 Philadelphia.

4 Just to give you a little bit of
5 background about the enterprise zone program as it
6 operates here in Philadelphia, I'll give you some
7 history. In 1982, the State of Pennsylvania, through
8 the Department of Community Affairs, proposed a state-
9 wide economic development initiative called the Enter-
10 prise Development Area Program. This was the predecessor
11 of what is known as the Enterprise Zone Program. This
12 program was designed to provide state and local
13 resources to revitalize inner city and rural distressed
14 areas. The City made application and received a grant
15 of two hundred and fifty thousand dollars to initiate
16 the Enterprise Development Area Program. We have matched
17 those state resources with an allocation of about two
18 hundred thousand dollars of Community Development Block
19 Grant funds. The representative that was here from
20 HUD was stressing the elimination of certain programs.
21 Let me say at least once today that a number of the
22 federal programs that help us in economic development
23 are critical and remain critical to encouraging develop-
24 ment, not only in distressed areas of Philadelphia, but

1
2 in some of the stronger parts of the City. We need
3 programs like UDAG and Community Development Block
4 Grant funds. We need federal assistance.

5 In 1984, the state changed the name to
6 the Enterprise Zone Program and set aside an appropria-
7 tion of two and a half million dollars to be awarded on
8 a competitive basis between the seven municipalities
9 with existing programs. The City of Philadelphia was
10 the most successful applicant and received eight
11 hundred and twenty-five thousand dollars that year.

12 This Enterprise Zone Program is really a
13 key element in our overall neighborhood economic
14 development strategy. These three areas are positioned
15 to receive enhanced economic development programs from
16 the state as indicated by the previous speaker. The
17 state has seen fit to prioritize requests coming out
18 of the zones for a variety of state programs, whether
19 they be economic development or housing or education,
20 so that the state increases the priority of applications
21 either from the City or from the community out of these
22 areas in order to target a greater proportion of state
23 dollars to these areas, and also, to coordinate those
24 dollars as they are spent in that area.

1
2 The program has served as a catalyst to
3 bring together business groups and residential organiza-
4 tions within the enterprise zones to find solutions to
5 common problems. The Commerce Department operates, funds
6 or coordinates a number of programs within each enter-
7 prise zone which are designed to foster increased job
8 placements for area residents, promote overall business
9 and community development, and enhance the overall
10 quality of life, as I said earlier.

11 I'd like to describe these programs in
12 the context of these three goals that I mentioned
13 earlier. First, in order to effectively increase job
14 placements, it is important to know who is in need of a
15 job. We therefore fund an enterprise zone job bank in
16 each of our zones. These job banks are operated by our
17 community-based enterprise zone organizations. In
18 Hunting Park, for example, that organization is the
19 Neighborhood Enterprise Corporation. On American
20 Street, it's the Lighthouse, and in West Parkside, it
21 is the Parkside Association. We've also made sure that
22 these job banks are linked to our employment and train-
23 ing programs at the Private Industry Council or better
24 known as PIC. Each enterprise zone organization is

1
2 therefore also a PIC referral center, reaches out into
3 the community for people who need employment and need
4 training to gain employment. With our enterprise zone
5 organizations, they've made over two thousand placements,
6 many of them with firms in the zones, and have made
7 more than two hundred qualified referrals to PIC
8 training programs. This relationship with the Private
9 Industry Council is a relatively new one. At least
10 two hundred referrals to training programs have been
11 relatively recent.

12 Second, our enterprise zone organizations
13 help us promote overall business and community develop-
14 ment in the zones by serving as a Business Service
15 Center, which I mentioned earlier. One of the activi-
16 ties of the center is to increase membership in the
17 business association, prepare a directory of firms,
18 publish a quarterly newsletter, and help promote the
19 zone. The enterprise zone organization also helps zone
20 firms solve local problems. These efforts have been
21 very helpful in creating the kind of relationships -- I
22 keep stressing that. This organization helps solve
23 problems for businesses. The businesses in return
24 approach that organization when they have openings that

- 1
- 2
- 3
- 4
- 5
- 6
- 7
- 8
- 9
- 10
- 11
- 12
- 13
- 14
- 15
- 16
- 17
- 18
- 19
- 20
- 21
- 22
- 23
- 24

In addition, the efforts of the enterprise zone organization, the Commerce Department, and its delegate agencies, Philadelphia Industrial Development Corporation, Philadelphia City-Wide Development Corporation, provide a variety of financial incentives and financial assistance that are superior -- I need to stress the word superior -- to those provided to firms on a city-wide basis. We have a zero interest loan program, for example, that provides up to fifty thousand dollars, interest-free, to industrial firms that are expanding or locating within zones. PIDC also offers its loans at lower rates to firms in the zones than are offered otherwise. We will soon be implementing a real estate reclamation program. That long title simply describes a program that is designed to reduce the cost of returning obsolete or dilapidated properties in these areas to productive use. One of the problems in the older industrial areas is that there simply has not been enough cleared space for firms that wish to expand in the area to be able to do so. Many times a firm that is growing leaves an area not because it doesn't like the local environment, but simply because there is not

1
2 enough space for it to expand. Unfortunately, it takes
3 the jobs that it has with them. It takes that invest-
4 ment and places it somewhere else, hopefully in the
5 city, but sometimes not even in Philadelphia. So, we
6 have to make sure we can clear space and find space
7 within the area so that firms that are growing, and
8 there are many firms that are in these older areas that
9 are growing, have an opportunity to grow in place and
10 provide additional employment to the people living in
11 that area; also, because we want to assure that the
12 local community benefits in business opportunities in
13 the zone. In addition to receiving jobs, we have
14 aggressively implemented a program that is called the
15 Community Economic Development Corporation Program, and
16 in that program, we provide assistance to community-
17 based organizations that are located in zones that would
18 like to either operate or participate in a business
19 venture in some fashion. An example that I always point
20 to is a project located in North Philadelphia on North
21 Fifth Street in the heart of the Hispanic community.
22 There was a commercial and office building that was in
23 foreclosure. It served as a site for many community
24 service agencies that were very important to that

community. It also was right in the center of the Hispanic commercial district, as I said, and could serve and had served as an anchor in that area. By working with the local community organization, a local bank here in Philadelphia, and by lending some city dollars at a low rate, we were able to provide an opportunity for that community organization to purchase and renovate, and now fully tenant that building. It is one hundred percent occupied and generates a positive cash flow; in other words, money that the community organization can now use for other purposes that it is involved with in helping that community. It has also retained a number of jobs in that area and a number of people in that area, and it also serves as a draw for that commercial strip. So, the community has played a very active role in both the ownership, both in the benefit of receiving continuing funds out of a viable project and also, helping promote economic development in the neighborhood. That is one of several examples of how the community is factored in. When you talk about Civil Rights, we're talking about the minority community having the ability to directly benefit in a financial way by some of the efforts involved.

1
2 Just to sum up the efforts over the last
3 two years agin, thirty million dollars in public and
4 private investment. Forty-four firms have either
5 started up or relocated to our zone. Forty-eight have
6 expanded, and sixty firms have been encouraged to stay
7 as opposed to leaving.

8 Skipping back just a second to my most
9 previous comment, Bob Woodson is going to talk some
10 about community-based organization involvement later
11 today. Bob is a very strong supporter of the concept
12 of enterprise zones and supportive of the fact that
13 the local community should be a very active partner in
14 that effort.

15 Getting back into the issue of quality
16 of life, it is important to stabilize and improve the
17 business environment or the climate in which these
18 businesses are operating in these zones. I mentioned
19 earlier the issues about crime, issues about physical
20 appearance, the issue of whether or not transportation
21 is good into the area so that people can have access to
22 the jobs is very important. We're very mindful of the
23 goal to improve the quality of life in our zones and
24 have initially concentrated on issues of security and

1
2 physical appearance. We've introduced a Security Rebate
3 Program to encourage firms to protect their real and
4 personal property and their employees. This program
5 provides for rebates for such security improvements
6 such as fencing, lighting, guard rails, and also helps
7 to encourage firms to cosmetically enhance the appear-
8 ance of the neighborhood that they are located in. We
9 are expanding this program to include town watch pro-
10 grams this year, again playing on this partnership to
11 be developed between local and residential in the
12 business community.

13 I mentioned the Real Estate Reclamation
14 Program. That also has the ability to improve the
15 physical appearance of the areas, and if you've ever
16 been to any of these three areas, you know that the
17 physical appearance can be as much of a discouraging
18 factor to new businesses moving into the area as any
19 other factor could be.

20 One other element of this environmental
21 concern has been our clean-up program, and it's been
22 very successful in terms of working with the community,
23 business and government agencies to improve the appear-
24 ance of the zones. We've institutionalized the clean-up

1 effort and will have that occur in a major way at least
2 once a year, also exploring ways to have continuing
3 efforts to work with the neighborhood to keep the area
4 clean.
5

6 Another very important factor is to try
7 to get city government to coordinate the way it delivers
8 services to these areas. We're working with the Managing
9 Director's Office, the Mayor's Office, and the Service
10 Division of the Commerce Department to try to improve
11 city services that are provided to both businesses
12 and people that live in those zones. In fact, we have
13 tried to create something called coordinated neighborhood
14 development districts in which the City's Housing Depart-
15 ment is also made part of this effort, so that we are
16 trying to coordinate housing improvement in a way that
17 maximizes economic development.

18 Just to give you a rough example of that
19 in the area that we're trying to implement this program
20 first, at the intersection of 29th and Dauphin Streets
21 in North Philadelphia, we've just put in a new five
22 million dollar shopping mall, yet there's about three
23 hundred or so vacant housing structures adjacent to that
24 mall site. So, it's critical that we work along with the

1
2 Housing Department to try to improve the housing stock
3 as well as the commercial area which we've just about
4 completed. We think that's beneficial to not only
5 making the economic development effort more successful,
6 after all, it certainly will add additional families
7 to shop in the shopping mall if those houses are
8 occupied, but also will give a kind of physical appear-
9 ance to the area that really will encourage further
10 development and give everyone the perception that some-
11 thing has really happened in that area.

12 Another part of this coordinated delivery
13 of city services involves the Health Department, and
14 maybe it's an issue that you might be concerned with
15 here at the Commission on Civil Rights. It turns out
16 that the very same area has the highest rate of infant
17 mortality in the city, and while it is not within
18 enterprise zones, I want to share the concept with you.
19 One of the things we've learned is that the Food
20 Assistance Programs, the Food Stamp or WIC Program for
21 Women and Infant Children and some other programs that
22 are really targeted to pregnant women and young children
23 has not been marketed particularly well in that area.
24 In fact, even though there is a brand new health center,

1 the program is not currently offered there. We've been
2 working along with the Health Department to try to
3 market that program. And not only does that improve
4 the quality of life, but it also provides additional
5 income to the supermarket, because up to forty dollars
6 per month per person will now be subsidized in terms of
7 purchasing power which will help the sales at the
8 supermarket.
9

10 It's those kinds of ways that local
11 government can help coordinate its efforts to make some
12 of these programs work, in particular within enterprise
13 zones.

14 In closing, I'd like to give you an update
15 on the status of state and federal enterprise zone
16 programs. The City of Philadelphia continues to seek
17 additional state and federal resources to encourage this
18 expansion of zones. We are particularly encouraged,
19 after much lobbying on our part, that the Governor has
20 proposed eight million dollars in enterprise zone tax
21 incentives as part of the Commonwealth 1986-1987 budget.
22 Pennsylvania currently does not have tax incentives as
23 part of the enterprise program. This proposed two-part
24 tax incentive would encourage development in enterprise

1 zones. It would establish a four million dollar fund
2 to encourage local municipalities to abate local property
3 taxes which we currently do in Philadelphia, to encour-
4 age economic development or the development of new
5 structures or rehabilitation of structures within the
6 zones. The nice part about this is that in an era of
7 shrinking dollars coming to the city, the state would,
8 in effect, be returning dollars to Philadelphia for any
9 abatements given to enterprise zone firms. We are very
10 pleased with that.
11

12 In addition, there's another four million
13 dollar tax credit tied in with the Neighborhood
14 Assistance Act, which is a state legislation, that would
15 provide tax credits for private investments made to
16 rehabilitate existing structures in the zones. In an
17 effort to enhance possibilities for a federal enterprise
18 zone program, and I want to stress again the earlier
19 speaker's comment, there is not a federal program, in
20 spite of a lot of discussion and talk. Since 1980, we
21 do not have any resources from the federal side to help
22 us -- that are directed to enterprise zones per se. But
23 in an effort to enhance those possibilities, I attended
24 a meeting of the American Association of Enterprise

1
2 Zones on March 7th, and participated with state and
3 local officials in engineering a resolution to encourage
4 President Reagan to use an executive order to quickly
5 provide federal support for enterprise zones. As was
6 mentioned, federal enterprise zone legislation has been
7 bogged down in Congress for years. I want to, again,
8 stress that there's a need for many of the existing
9 federal programs and incentives within the zones; that
10 the proposed tax and regulatory relief will not be
11 enough, in our opinion. This executive order would
12 support the efforts of the, at that time, twenty-eight
13 states that currently had an enterprise zone program,
14 and it could be, in effect, neutral in a budgetary
15 sense simply by targeting and coordinating. You'd be
16 surprised the federal agencies that are simply not
17 aware of or not actively involved in working together
18 within a specific area to assist enterprise zone efforts.
19 If that was done, without spending an additional federal
20 dollar, that would be a tremendous benefit to us in
21 Philadelphia. So, we urge the President to take an
22 executive order that would simply organize the federal
23 departments that are currently in operation to be more
24 helpful and to be more coordinated with programs

1
2 operating in the zones.

3 And, I would also urge the U.S. Commission
4 on Civil Rights to be supportive of that effort and to
5 join with us to press for continued state and federal
6 resources.

7 As stated earlier, our main accomplish-
8 ments to date have been to foster a partnership -- I
9 want to stress that -- a partnership between business and
10 residents of the zones in efforts to find common solutions
11 to common problems and to focus the attention of
12 government, business, and community groups on the city's
13 three enterprise zones. We look forward to increased
14 resources from the state and enhance benefits for our
15 business and residents to continue the momentum created
16 during the past two years in our program.

17 I'd be glad to take any questions.

18 THE CHAIRPERSON: Before we go forward,
19 let me point out to you that we will be breaking in
20 about another ten or fifteen minutes, and I want to call
21 your attention to the afternoon program which I think
22 will be really very, very stimulating. We will have with
23 us Bob Woodson from Washington, who is an extremely
24 stimulating person, describing some of the private

1
2 efforts that are under way, and then we will have
3 several people coming in from Philadelphia who -- or
4 the Philadelphia area who are engaged in certain private
5 efforts; for example, by way of coming attractions, I
6 want to call your attention to Miss Liller B. Green,
7 who is running a private school in the Germantown area
8 made up predominantly, almost primarily of minority
9 group youngsters in which ninety-three percent -- did
10 you hear that -- ninety-three percent of her students
11 are going on to college. So that I simply want to urge
12 you to be back with us at that time.

13 Now, we have about ten or fifteen minutes
14 for questions, comments, so I wonder if some of you
15 would want to address any questions to either of the
16 two speakers on the Urban Enterprise Zones.

17 JOHN GREEN: Joe, you mentioned the
18 link between the enterprise zone businesses and the
19 community. Is anything being done with the public
20 schools or vocational schools where you can get people
21 who are not in a real degree of urgency to make money,
22 but would like to take an entry level position or salary
23 in order to develop a long-term career?

24 JOSEPH JAMES: Before I answer that, I

1
2 want to introduce Mike Gallagher from my staff. Mike
3 is the enterprise zone manager here in Philadelphia.
4 He's going to help me answer some questions. But we
5 have tried to create relationships with the local
6 schools that are within the zones, and we think it's
7 a very important relationship. We have incorporated
8 the Summer Youth Program where we've been able to, to
9 help locate youth and firms that are in the zones
10 during the summer. We have found that after creating
11 that kind of relationship, in many cases upon graduation,
12 students have been hired as full-time employees.

13 Many of the positions that are available
14 in the zones are entry-level positions. We're very
15 encouraged by that. A lot of the placements that have
16 occurred by the job banks that I've mentioned have been
17 direct placements into companies at the entry level.
18 There might be more opportunities that we need to
19 explore, but we have touched in that area so far.

20 THE AUDIENCE: We've met several years
21 ago. You didn't mention in your talk the super fund
22 that the state has for industrial development bonds.
23 I personally have found it to be a useful tool.

24 JOSEPH JAMES: I didn't mention it

1 specifically, but I did allude to the fact that the
2 state has a variety of programs that it targets in some
3 way to enterprise zones. There was an economic develop-
4 ment bond issue that provided a large amount of resources.
5 There's been some problems with that program in making
6 it work not only here in Philadelphia, but across the
7 state. There are some changes also included as part of
8 the Governor's new budget that should make it a little
9 more workable. As I mentioned earlier, the state does
10 give priority to request to use that program and many
11 others that are coming out of the enterprise zone areas.

12
13 MALINDA SILER: You gave an example of
14 benefits gained by the enterprise zones, and you pointed
15 out that a super factor would be gaining additional
16 monies through the WIC Program. Would you mention some
17 of the other types of jobs that are located in the
18 enterprise zones in the different kinds of industries?

19 JOSEPH JAMES: I'll let Mike help me
20 with that one. But let me distinguish the supermarket
21 example. It is not located in the zone, but the concept
22 that I was trying to put forward was that there are a
23 variety of ways that local government and the private
24 sector, the state government and the federal government

1
2 can coordinate a variety of programs that they have in
3 operation today in a way that can be supportive of
4 development in neighborhoods. It takes an extra initia-
5 tive, an extra phone call, maybe an extra two or three
6 meetings from people in departments that you think have
7 no connection.

8 The supermarket issue that I referred to,
9 one of the benefits that we're going to get to because
10 of this what we call coordinated development approach,
11 that means talking to different departments in the city
12 to see what they can contribute to a particular neigh-
13 borhood, is that the Health Department is going to
14 really push the WIC Program. That's good for the
15 neighborhood in terms of the infant mortality problem,
16 but it's also good for the economic development project,
17 which is the shopping center, and the primary tenant
18 there is a supermarket, because it's going to help
19 increase sales, and we're concerned about maintaining
20 sales in that area.

21 Mike, if you could just give us some
22 examples of the other jobs that have been created.

23 MIKE GALLAGHER: Well, as Joe mentioned,
24 there are over seven hundred firms. These areas were

1 industrial conservation districts, especially Hunting
2 Park West and American Street, and we did a survey on
3 the leading firms, and it was metal fabricators, steel
4 processors, meat processors, garment fabricating
5 industries, and the important thing about that is that
6 we often hear about the change in Philadelphia's economy
7 from a manufacturing base to the service sector, and
8 obviously, that change has taken place, but we don't
9 want to forget about the manufacturing base, because
10 it is a viable base that actually provides the consti-
11 tution and backbone for our neighborhoods. And if we
12 focus all of our attention on the services and write
13 off the manufacturing base, we're doing a disservice to
14 the community.

15
16 The three services are the main ones
17 out there, but there is a large variety of smaller
18 firms with ten, fifteen, twenty employees that target
19 their jobs to the neighborhood people, and it is a
20 scale that we have to focus on and we have to put our
21 resources on or else we're spelling doom.

22 We're going to have Center City develop-
23 ment and we're going to be surrounded by tremendous
24 blight.

1
2 MALINDA SILER: Are the jobs essentially
3 white collar?

4 MIKE GALLAGHER: No, they're essentially
5 blue collar. We have targeted placements through Mercy
6 Vo-Tech out in Hunting Park West. We have brought a
7 person in, a young fellow or young woman, and they
8 have trained them to the type of business they're
9 involved in.

10 MALINDA SILER: Are they doing their
11 own training?

12 MIKE GALLAGHER: Sure, through tax
13 incentives.

14 JOSEPH JAMES: I want to make a comment
15 on what Dean Singley said about this issue of a separate
16 economy or a separation in terms of the black community.
17 Without speaking positively or negatively about that
18 concept, I can say, with some authority, that it takes
19 a long time to develop entrepreneurs, whether they're
20 black or white, and for this country or these particular
21 communities to wait until there have been enough black
22 entrepreneurs developed is, in my opinion, a mistake,
23 especially if you go for the fact that there are a
24 number of businesses in our zone, some very small, some

1
2 as large as Tastykake Baking or Schmidt's Brewery that
3 are already in place and are located basically in the
4 black community, and that it's important to create the
5 relationships, the communications dialogue, the ability
6 to work together so that the business and residential
7 community see it's in their best interest to solve
8 problems and work together. Once those relationships
9 are formed, the firms in many cases are willing to hire
10 local people and provide direct, tangible benefits to
11 that community.

12 THE CHAIRPERSON: Could I ask this
13 question maybe of Mr. Mulligan? I'm concerned about
14 the physical layout of the land. This seems to have a
15 potential for crossing the political spectrum. Are we
16 dealing with an idea that people are paying homage to,
17 but not really getting behind? Is it just cosmetic
18 or is it real in terms of a serious and national politi-
19 cal thrust that might get behind this?

20 PATRICK MULLIGAN: My perception is it
21 is a national thrust. It may have come from a conserva-
22 tive approach from doing what enterprise zones are
23 supposed to do. It does seem to have gained strong
24 bipartisan support, and a good example is the coalition

1
2 of Congressmen Garcia and Kemp introducing the legisla-
3 tion. They are from opposite ends of the political
4 spectrum. It does seem to have wide support, but the
5 House is not willing to give in on any revenue cuts.
6 If there is a tax reform act or a budget balancing
7 problem going on -- that's my perception of it.

8 JOSEPH JAMES: I think it's a broad
9 belief that the basic concept is a sound one, and
10 especially if that concept is broadened to go beyond
11 tax benefits. I think part of the political problem
12 is that the Reagan Administration has linked the enter-
13 prise program with other cuts in programs, and the House
14 has not been eager to go along with that. I would just
15 hope that there would be some way of the administration
16 moving forward, and I believe there is an ability to
17 be supportive in a budgetary neutral way in everyone's
18 interest.

19 The twenty-eight to thirty states that
20 are currently implementing the program are showing
21 success. I think the comment that Pat made earlier
22 about the issue of encouraging local government to look
23 at a specific part of its city that's in trouble and
24 to begin to focus on ways to improve that part of the

1
2 city is helpful. I think the states have made a real
3 commitment to put resources, and the State of Pennsylvania
4 does not, as I said earlier, does not have a Tax Incen-
5 tive Program at this point. It's been one of providing
6 grants and loans and other forms of direct dollars to
7 solve some problems occurring within the zones and
8 encouraging businesses to expand there. That's about
9 all I can say on that.

10 JOHN BINKLEY: Mr. James, earlier you
11 referred to, I think, an association of enterprise
12 zones administrators or a group of some nature. Is
13 that mentioned in your statement where we can get the
14 identity of it?

15 JOSEPH JAMES: It's based in Washington.
16 It's mentioned in my presentation, but there's not an
17 address there. But I believe you can find it in Wash-
18 ington. If you need to get that address, let me give
19 you my telephone number.

20 JOHN BINKLEY: We've got that. The
21 association has a staff?

22 JOSEPH JAMES: A very limited staff, yes,
23 it does.

24 THE CHAIRPERSON: Let me then thank you

1 both, gentlemen, for an extremely helpful, useful
2 remarks. As we've indicated, this will be going into
3 the record and we will be recommending to the U.S. Civil
4 Rights Commission looking more seriously at strategies
5 such as this, and I would probably say to my colleagues
6 here, I would be very much interested in the question
7 of whether we can recommend for the Civil Rights Commis-
8 sion to support or develop some support for an executive
9 order. It seems to me the Civil Rights Commission is
10 painfully in need of positive kinds of programming to
11 demonstrate its support for progressive forms of change
12 related to the Civil Rights field, and I would hope to
13 be able to discuss this with staff and colleagues here.

15 JOSEPH JAMES: Just one other point is,
16 even the proposed federal legislation, including that
17 which has been put forward by the administration, has
18 talked about a very active role for local community-
19 based organizations to play in any zone program, and I
20 think, when you look at the issue of Civil Rights and
21 the ability to really put some meat behind implementation,
22 that's a benefit for the community. That kind of
23 inclusion of the community is a very important part of
24 the program. I'm sure Bob Woodson will talk about that.

1
2 THE CHAIRPERSON: I hope you'll return
3 this afternoon to be with us with Bob Woodson.

4 Thank you. Class is dismissed until one
5 o'clock. Please come back and I think you'll have an
6 extremely exciting afternoon in front of you.

7 ---

8 (Luncheon recess.)

9 ---

10 THE CHAIRPERSON: Let me welcome you to
11 the afternoon session of the forum that is being spon-
12 sored by the Pennsylvania Advisory Committee to the U.S.
13 Commission on Civil Rights. My name is Murray Friedman.
14 The meetings this morning and this afternoon seem to be
15 moving with different clientele for each session. This
16 morning we had a very interesting series of presenta-
17 tions, one by Dean Carl Singley of the Temple Law
18 School in which he dealt with the issues of Strategic
19 Paradigms in the Black Experience. He meant by that the
20 different kinds of strategies and approaches that have
21 been used in attempting to improve the black condition
22 in the United States.

23 In addition, we had a very interesting
24 session that featured the matter of Urban Enterprise

1
2 Zones and I am pleased and delighted that Patrick
3 Mulligan, who is one of our presenters, remains here
4 for the afternoon session.

5 Our discussion this afternoon will
6 revolve around two major, so-called new strategies,
7 the first being The Role of Intermediate Institutions.
8 I should explain to the audience here, since it is a
9 very small audience, that -- and this will be repetitious
10 for those of you that were here this morning -- that our
11 purpose is to compile a record for the U.S. Commission
12 on Civil Rights representing the views of the -- or
13 at least the ideas that the Pennsylvania Advisory
14 Committee have tried to generate in the area of new
15 strategies. It is our purpose to gather together the
16 statements and the discussion to compile them into a
17 document that will then be presented to the U.S. Civil
18 Rights Commission in Washington.

19 In effect, I think what we will be
20 saying to the U.S. Civil Rights Commission is, we've
21 been accustomed to doing Civil Rights business in a
22 certain way for many, many years. That way has been
23 very effective, has worked. We have nothing to be
24 ashamed of and much to be proud of in the Civil Rights

1
2 and tactics that we have developed over the years, but
3 it may very well be that in the coming years we may have
4 to look at issues involving minorities in ways somewhat
5 differently and to develop tactics and approaches,
6 strategies, if you will, that will attempt to grapple
7 with the problems they possess today in a manner that
8 was not done in previous years.

9 Secondly, I should indicate to the
10 presenters here today that we have representation from
11 the press here and one of our purposes is to also
12 generate community discussion of new Civil Rights
13 strategies so that it is our hope that the public itself
14 will begin to interact with these ideas and we can light
15 some sparks as we go along.

16 Now, it gives me a great deal of pleasure
17 then to begin the second half of our program, The Role
18 of Intermediate Institutions. Now, that's gobbly-gooky
19 kind of language, I know, and I know that Bob Woodson
20 will translate that into English so that it won't sound
21 like it came out of a graduate course in sociology or
22 something. I am very pleased to introduce Bob Woodson
23 to you. Bob is a friend, as well as a colleague who,
24 along with several of his mentors; namely, Peter Berga,

1 introduced me to the concept of intermediate institutions
2 almost a decade ago. I will not attempt to explain.
3 I'll let him do this.
4

5 The program itself that we have set up
6 for you between now and three o'clock will attempt to,
7 first, lay out the concept which is Bob's role, and then
8 to show you how three people in the Philadelphia area
9 are using this concept, are activating it in our own
10 community, and it will be for you to measure and try
11 to understand what they're trying to do.

12 Perhaps I'll simply mention all three now
13 and then let you all go as soon as Bob Woodson is done.
14 After him, we will have Liller B. Green, the Director of
15 the Ivy Leaf School in Germantown, and I can't help but
16 mention to you that it is my understanding that this is
17 a school that's primarily peopled by minority group
18 children -- I'm not sure how far they go in terms of
19 grade levels -- but where some ninety-three percent, she
20 told me in one of our conversations, go on to college,
21 and I'm impressed. I'm very impressed with that.

22 Secondly, we have Aaron A. Bocage, who is
23 Senior Partner of EDTEC. That's an acronym for Education,
24 Training and Enterprise Center over in the Camden area;

1
2 and then Patricia Coulter here from INROADS in Philadel-
3 phia, which has to do with training of youngsters.

4 So, why don't we start with Bob, who
5 heads the National Center for Neighborhood Enterprise.

6 Bob?

7 ROBERT WOODSON: Most people bring some
8 biography to whatever they write and say, and I'm no
9 different from anyone else, but I am from Philadelphia.
10 It's my home and my folks still live here, so it's a
11 pleasure to be back here.

12 I'd like to just touch on some of the
13 concepts that are outlined in this whole approach that
14 is identified in this little booklet. It's called
15 To Empower People: The Role of Median Instructions to
16 Public Policy. I came to this experience as a practi-
17 tioner growing up in Philadelphia who's been concerned
18 since the early Sixties in the Civil Rights days that
19 with all of the marches and all of the demonstrations
20 and all of the changes that have occurred, that poor
21 blacks have not benefited from those changes. An
22 article written in 19 -- I believe it was October 9th,
23 1965 by Bill Raspberry, who was then a reporter for the
24 Washington Post, said, and he quoted some of the Civil

1 Rights leadership of that day in Washington when they
2 said despite all the gains of the Civil Rights movement,
3 that poor blacks were not benefiting and that race-
4 conscious policies would not help them, that their
5 problems were basically economic and, therefore, more
6 must be done to enhance their economic well-being. And
7 so that in spite of this knowledge, then, I think that
8 the leaders of that time looked to the poverty programs
9 that were emerging as one way of extending the gains of
10 the Civil Rights movement to those people who are mired
11 in poverty, even though the poverty program was designed
12 by twenty-one white liberal males,, did not involve any
13 of the leadership of the Civil Rights movement of that
14 day, and these programs were devised and implemented.
15 As we look now twenty years and the expenditures of
16 one trillion dollars, which represents about a twenty-
17 five fold increase in the amount of federal, state and
18 local dollars that are going to meet the needs of the
19 poor, we find that one-third of the black community is
20 in danger of becoming a permanent underclass at a time
21 when there is a slight expansion of the black middle
22 class in those making middle class incomes, so that the
23 salary gap is between a black couple both who are working
24

1 and their white counterparts it's just about negligible.
2
3 At a time, those in the bottom rung in the black
4 community, that gap has not improved over time.

5 So, obviously, even with the poverty
6 programs in the Civil Rights movement, our resources are
7 not reaching. In fact, I have written extensively on
8 this and what we have done, even though inadvertently,
9 have created an industry out of serving poor people.
10 The City of New York, for instance, spends about fourteen
11 point eight billion dollars annually on meeting the
12 needs of its one point two million poor people, or
13 one-fifth that city's population.

14 Seventy-four cents of every dollar goes
15 to social workers, psychologists, counselors, all those
16 who serve the poor, and only twenty-six cents goes
17 directly to the poor over which they can exercise any
18 control or choice or option.

19 So, this arrangement that we have flies
20 in the face of certain realities that were revealed in
21 the research that we and others have done several years
22 ago about poor people. When they are faced with a
23 crisis, the first institutions that they turn to are
24 friends, relatives, their local church, ethnic subgroups,

1
2 Masonic organizations; in other words, institutions
3 within their immediate environment. The eighth institu-
4 tion that they turn to are professional service providers.
5 So, in light of this reality, we tend to deliver ser-
6 vices to the institution of last choice of those in need.

7 So, what we sought to do in our research
8 is to look at these institutions that poor people tend
9 to turn to, to find out why they do so. Instead of
10 going into low-income communities as traditional service
11 providers do and study failure, we go in and study who
12 loses, who has five children and on welfare, two are in
13 jail, two are prostitutes and one on drugs, and we try
14 to find how many more people in that environment share
15 that same experience, and then we try to cure them, and
16 that's what the service industry is all about.

17 What we do by contrast is go into those
18 same communities and identify the mother who was
19 abandoned by her husband at age twenty-one, left with
20 five children, and at the end of a twenty-year period,
21 has sent all five children to college and sent herself
22 to two years of college, and ask ourselves how did someone
23 achieve what she did under the circumstances that others
24 could not achieve, and then we bring those people together

1 in smaller groups to try to study success among low-
2 income people and the institutions. And these institu-
3 tions that they turn to are called intermediary institu-
4 tions because they stand between the individuals in
5 their private life and the larger bureaucracies of
6 public and private life; the big church, the big union,
7 the big government; that these institutions stand between
8 and help that person to mediate their own personal life
9 with those. Middle class people that have money hire
10 their mediating institutions; that is, if you have
11 trouble with IRS, you hire a tax lawyer, or if you're
12 being sued, you hire a lawyer. In other words, if you
13 have the means to do so, most people will hire
14 individuals to function as intermediaries to deal with
15 large bureaucracies. But if you're poor, you don't have
16 the means, or even sometimes the information about where
17 to turn to, so you have to rely upon someone within
18 your own environment that has more information than you
19 do and has enough sophistication to help you mediate
20 those larger bureaucracies.

22 But what we also found is that these
23 intermediary institutions identify as indigenous to
24 those communities, also represent a source of innovation

1 in public policy. To my knowledge, they have never been
2 the subject of public policy until Peter Berger, a
3 conservative sociologist, and Richard John Newhouse, a
4 liberal anti-war Lutheran minister, came together from
5 the various political positions to try to analyze
6 these institutions to determine what role have they
7 played or could they play. So, five of us were commis-
8 sioned to write books, and I did so as a practitioner,
9 and so for five years, I went back to some of those
10 organizations that I had helped around the country to
11 try to find out why people turn to them, bring them
12 together in smaller groups, and then try to analyze what
13 are some of the barriers to broadening the use of these
14 intermediary institutions, and a more difficult question
15 and challenge, how do we make more constructive use of
16 them.
17

18 Some of the barriers that I found tend
19 to be -- for instance, in professional licensing. We
20 know that I wrote -- in my first book, I analyzed and
21 studied Sister Fahta's program and wrote the first book
22 on the House of Emoja, and I identified twelve other
23 people like her around the country who were very
24 successful in intervening in and stopping youth gang

1 violence. I also studied people who have been success-
2 ful in teaching children, as Liller has done. Some of
3 those children have been abandoned by the public school
4 system, but yet people within their own communities
5 devised their own means and techniques of teaching
6 children. But now there's Sister Fahta, for instance,
7 and others around the country who wanted to start a
8 program as a business. They would say technically
9 Sister Fahta couldn't qualify to do what she's doing,
10 because she doesn't have a degree in child education or
11 in social work. And the women that I've identified
12 around the country that have considerable experience
13 at raising children under very difficult circumstances
14 could not qualify under most states' rules and regula-
15 tions to open a day care center because they don't have
16 a degree in early childhood education. But a person
17 twenty-two years old, a graduate from a university,
18 could come into their same neighborhood and open the
19 day care center and do so without any parental exper-
20 ience, and I'm not against professional certification.

21 The question is and the policy considera-
22 tion is, is certification synonymous with qualification,
23 and I question whether it is. But those are the kinds of
24

1 barriers, and also what we have been studying relates
2 directly to Aaron's program, and that is, too often, we
3 have looked at services to assist the poor strictly in
4 terms of, that's it, service; welfare, food stamps,
5 special job training programs, when in fact if we looked
6 around the country at every ethnic group's participation
7 in the economy, it is not dependent upon how many Civil
8 Rights laws are passed, aid them or government support.

9
10 Japanese-Americans have the highest
11 median income of any other group in America, even whites,
12 and thirty percent are in business for themselves. And
13 you can see the correlation between business formation
14 rates and any group's participation in the American
15 economy. Eighty percent of all new jobs in the
16 American economy are not produced by IBM or Xerox; they
17 are produced by small businesses that start. If you
18 look at blacks, only eighty percent of us are in business
19 for ourselves, and half of those don't hire anyone. So
20 that what we are suggesting by this is that it is most
21 important to begin to analyze what are those factors
22 that account for any group's participation and how do
23 we gain greater access to the economic landscape.

24 Another fuzzy area that may be afield

1 from what I've been asked to address is this very, very
2 spurious relationship between political power and
3 economic power. I come from a city that is seventy
4 percent black; the City Council, all the commissions,
5 the school board, and there have been twelve major
6 urban development projects in that city involving
7 billions of dollars. But you can walk from one end of
8 our major business area to the other, about eighty
9 blocks down Wisconsin Avenue, and you'd be hard-pressed
10 to find two black owned businesses in a city that is
11 seventy percent black. And I think that is because a
12 lot of the leadership of the city comes out of the Civil
13 Rights experience and they employ what they know when
14 they're in office, so that when an issue of empowerment
15 is confronted with an issue of Civil Rights, Civil
16 Rights always wins, even though one sometimes is used
17 to undermine the other.
18

19 For instance, City Bank wanted to come
20 in to Washington, D.C., and Washington, D.C.'s existing
21 banks do not loan money to low-income black areas in a
22 black-run city. They don't give money to small busi-
23 nesses that are critical to any group's participation.
24 They don't give mortgage money. So, City Bank was going

1
2 to come in to the city and open a branch, and they
3 appealed to City Council, with a promise to make mortgage
4 money and money for business loans available to those
5 areas that had been neglected by the existing banks.

6 Well, the existing banks mobilized for
7 the first time and appealed to City Council, and said,
8 City Bank has investments in South Africa, so, therefore,
9 you shouldn't let them in. City Council agreed and
10 voted not to let them in. Poor blacks in the northeast,
11 southwest sections still don't have mortgage money, be-
12 cause --to do the kind of things that Aaron and others
13 are doing.

14 So, in summary, it seems to me that
15 mediating structures represents to me the kind of
16 vitality, the kind of innovation, the kind of resource-
17 fulness that people living in distressed communities
18 have exhibited over time, but their accomplishments go
19 ignored by the larger body politics. Every time someone
20 surfaces that is doing something like Sister Fahta, we
21 dismiss them by saying, "Oh, it's because she's a
22 charismatic individual," or, "It has no general applica-
23 tion to the whole society. It's cute, it's interesting,
24 yes, it has helped people, but I don't think one can

1
2 generalize from it. It's not adaptable to other
3 circumstances, even though it was never tested."

4 And, then, on the other hand, you have
5 an unwillingness to look at what are some of the
6 economic and financial barriers that enable those
7 existing mediating institutions that exist in this room
8 to expand and exploit their potential. For instance,
9 the National Center convened about fifty independent
10 neighborhood schools like Liller Green's, for the first
11 time in this country brought them all from Indian
12 reservations, from California and Texas, we brought
13 them together for the first time. They met. There are
14 thirty independent schools in Philadelphia; fifty in
15 Chicago, all over. So, they can begin to exchange among
16 themselves some of the -- some of them in the same city
17 didn't know about their existence. And what we found
18 in our study of these two hundred and fifty independent
19 neighborhood schools just boggles the mind in terms of
20 what they've been able to accomplish in terms of teaching
21 children that others have given up on and doing a fine
22 job with kids who were considered average.

23 So that mediating institutions represent
24 for me and for my colleagues and others one of the

1 richest resources that this country has, particularly
2 for addressing the needs of low-income people, but
3 unfortunately, they continue to be outside of the
4 national debate, that people like Aaron and Liller,
5 and others who are accomplishing great things are seldom
6 the source of study. Our academic institutions and
7 major -- the federal government spends about thirty
8 billion dollars annually on social science research.
9 You can comb the literature; you won't find very many
10 studies that study the success or lack thereof of
11 independent schools. You will not find among the
12 research any assessment of the economic development
13 projects that Aaron and his partner have designed to
14 meet the needs of high-risk kids, the throw-away kids.
15 He and others have made them productive.

17 So, it's just fascinating that we have
18 this rich resource. We have policies and programs that
19 are supposed to meet the poor, but you got the problem
20 and the resources on this side of the continuum and the
21 solutions and the people who are in need of these
22 solutions on this side, and, therefore, this is the kind
23 of discontinuity that continues to abound.

24 In my city of Washington, D.C., for

1 instance, when we realized that we had a teenage
2 pregnancy crisis, what was the response? Well, it was
3 the usual response. We have a Blue Ribbon Committee.
4 Of course, that Blue Ribbon Committee recommends that we
5 have a task force funded by the city. Then, we have,
6 for every problem, a program; for every program, a
7 bureaucracy; for every bureaucracy, a budget. And now,
8 we've got hundreds of thousands of dollars for profes-
9 sionally trained people to go into these communities and
10 counsel these wayward young ladies, when, in fact, we've
11 got people who are manning mediating structures through
12 their own voluntary efforts who have made it possible
13 for five hundred and eighty kids from one public
14 housing project of four hundred and sixty-four units
15 over seven years to go on to college. Teenage pregnancy
16 in that one public housing development dropped almost in
17 half in four years and yet, the mayor and the people in
18 power never went to her and others like her who have
19 demonstrated through their actions that they can solve
20 problems that have defied solutions by the traditional
21 approaches. But instead, we keep funding things here
22 and ignoring the reality that exists here, and so that
23 mediating structures become critical if we are to devise
24

1 solutions to social problems in the present and in the
2 future.
3

4 You all saw This Vanishing Black Family.
5 Let me just say what distresses me most about it, black
6 teenage mothers have become the latest hustle. Bill
7 Moyers, at the end, will get his Emmy. Leon Dash, a
8 black reporter who lived one year among low-income black
9 teenage mothers and asked them questions that he would
10 never allow his own daughter to answer, he will get his
11 Pulitzer. And now, a black economist at the University
12 of Chicago, Charles Wilson, just got funded by the Ford
13 Foundation, the Carnegie Corporation, to send Ph.D.
14 students by the hundreds into the black community of
15 Chicago to gether more data. They will get their Ph.D.'s,
16 and at the end of it, everyone will be celebrating the
17 problem and getting money from studying the problem and
18 getting money for providing the social equivalent of
19 Laetrile to the solutions, and the people experiencing
20 the problem will continue as they have in the past, and
21 those, like the people represented here this afternoon
22 who will follow me, will continue to struggle hand-to-
23 mouth to do the astonishing things that they do. Until
24 that kind of equation changes, I don't see very much hope

1 for anything happening.

2
3 So, I'm pleased to have been invited to
4 be a part of this deliberation. Thank you.

5 (Applause.)

6 THE CHAIRPERSON: I'm not sure how to
7 proceed here. We can go immediately into these indi-
8 viduals who are working in this area, or do you want to
9 take a moment or two to discuss the conceptualization?
10 Shall we go directly into the specifics? Let's do that.

11 Liller? For those who came in a little
12 bit late, Miss Green is the principal, Liller B. Green
13 is the Director of Ivy Leaf School, a private school
14 in Germantown who has had an unusually successful
15 experience in educating minority youngsters.

16 LILLER GREEN: Thank you very much.

17 I couldn't help but agree with Bob as
18 he discussed the fact that lots and lots of things are
19 studied, but there is very little attempt to really
20 study success stories in the black community.

21 I was recently appointed to become a
22 member of a twenty-one panel study group, and we studied
23 for the past year elementary education for the United
24 States Department of Education. I was the only minority

1 member in that study group. As a part of that group,
2 we had to present position papers, and members of the
3 study group, along with staff persons from the Department
4 of Education, made site visits at various schools
5 throughout the country. We did have members of the
6 committee along with some persons from the United States
7 Department of Education to visit Ivy Leaf School, and
8 their evaluation of the school was that it is of excel-
9 lent quality and they were frankly quite surprised at
10 the level of work that was being conducted there. They
11 reported this back in our subsequent meetings.

12
13 The interesting thing, however, is that
14 we had members on that committee from Harvard, from a
15 Harvard Research Department, and from University of
16 Pennsylvania -- University of Pittsburgh Research
17 Department, and as I read material that had been
18 released later, I found out that the United States
19 Department of Education gives very large sums of money
20 for research. And I said to the members of the committee,
21 now that you see that this school has been extremely
22 successful for twenty-one years in educating blacks, it
23 would be good if you would study the results of this.
24 The persons from those universities told me, "Well, I

1 don't make the decisions as to what is studied, so I
2 don't really think that we will get the chance to study
3 your school." And I think this just proved to me very
4 conclusively that they had no intention of studying the
5 school, that they have already selected what they're
6 going to study, and regardless of the success that they
7 found and regardless of how much is said about what can
8 be done in aiding minority youths, that they are going
9 to continue studying something, I guess, over in a
10 little tower and with a lot of theory, and not apply it
11 to what is possible to do.

12
13 With that in mind, I will tell you some-
14 thing about the school and I was invited to share with
15 you some of the things that have been going on in our
16 community.

17 Ivy Leaf School was founded by my husband
18 and myself twenty-one years ago, 1965. We started with
19 seventeen children and a staff of two, operating out of
20 two classrooms. We started with just nursery and
21 kindergarten.

22 The school grew very gradually over a
23 period of the twenty-one years. We now have almost
24 seven hundred students. We have a staff of sixty-five.

1 We operate out of four buildings with forty classrooms.
2 Our students have been excelling the entire time we
3 have been open. They are accepted at colleges all over
4 the country. They are sought after by some of your
5 very expensive and prestigious private schools, such as
6 Springside, Abington Friends, Chestnut Hill Academy,
7 Baldwin. These schools have all been in touch with us
8 requesting that we refer our students when they
9 graduate. Our school goes up to the eighth grade.

11 The president of the school last year
12 received three full scholarships; one to Springside,
13 one to Baldwin, and one to Philips in Massachusetts.
14 That was a nine thousand dollar scholarship. She
15 accepted that, and that full scholarship has been renewed
16 for the following year. She just completed one year at
17 Philips Academy.

18 The entire purpose of our school is to
19 offer an outstanding education to the youngsters that
20 we serve. It is all black. We serve about one hundred
21 first graders every year. Many of them come through our
22 preschool program, but some do not.

23 By the end of first grade, in most
24 instances, the one hundred children are on an above

1 reading level, and you might say, well, that's because
2 they're hand-picked. They're not. We accept any child
3 into first grade that applies and the parents can meet
4 the tuition, so that what we are basically saying is
5 that if we can do it with the limited funds that we have,
6 that we feel that some of the services we are offering
7 could be offered perhaps through the public schools,
8 although I know they have their own special needs, but
9 we're serving many of the same children that the public
10 schools serve, and we are not in competition with the
11 public schools, but we do feel that there are some things
12 that we are doing that could be shared insofar as
13 methods and procedure is concerned.

14
15 Our students are taught from the age of
16 two and three quarters. We begin the academic training
17 so that they have academic periods each day and then
18 they have their play periods each day. It is a mixture.
19 Our children that are three, if you have the opportunity
20 to visit our nursery, you will see that all of our
21 three year olds know all of their phonetic sounds and
22 their letters, and some have started on the next step.
23 That's our first step in teaching reading. We play
24 games, but we teach it every day and it's done in a

1
2 loving fashion so that it is not stressful, it is an
3 enjoyable experience. If you watch children in front
4 of television, you know that they can learn almost
5 anything that's presented to them, if it's presented
6 to them in a positive, warm and considerate manner.

7 By the time most of our children are
8 four and five, some of them are in reading books at the
9 age of four and many are in reading books at the age of
10 five, and we're talking about reading on the first
11 grade level.

12 We have very high aspirations for our
13 children as they pass from one grade to the next. We
14 are currently nursery through eighth grade. And because
15 we have very high goals and because they are carefully
16 planned and because we work very hard to keep a strong
17 sense of self-confidence, our children generally perform
18 on a very high level.

19 Now, of course, you always have a range,
20 but I would say -- we use the California Achievement
21 Test beginning in first grade. In mid first grade or
22 at the end of first grade, we begin to give the test.
23 We give it every year. Between ninety and ninety-three
24 percent of our children pass the California Achievement

1
2 Test on an above-grade level, and this is every year,
3 so that we feel we are offering a very significant
4 service. We have offered this service to hundreds of
5 black boys and girls over the past twenty-one years, and
6 we are now beginning to find out, informally, because we
7 don't have the money to do a research, that these
8 students have excelled as they have moved from our
9 setting into other settings. Parents come back and
10 tell us and students come back and tell us.

11 So, it is very difficult, very demanding
12 work. We work with an extremely limited budget, but we
13 will continue to offer the service as long as we're
14 able to.

15 (Applause.)

16 THE CHAIRPERSON: This is Aaron Bocage
17 of the EDTEC, Education, Training and Enterprise Center
18 in the Camden area.

19 AARON BOCAGE: I'm very grateful for
20 having the opportunity to be here. As Bob mentioned,
21 it's not the norm that people like myself are invited
22 to discussions like this. In fact, in the great Civil
23 Rights debate, it's extremely rare and unusual that
24 someone whose primary background has been in non-profits,

1 especially working with kids, and especially working with
2 the kind of kids that we work with, repeat offenders, is
3 thought to have anything to add to the great debate.
4

5 So, I appreciate the opportunity of being here and I
6 appreciate Bob's leadership in broadening the debate and
7 looking at some other options.

8 I basically have three points that I
9 would like to make. I brought along a slide show that
10 shows some of the things we've done with young people in
11 Camden. Before I do that, I just want to introduce you
12 to the first point.

13 The first thing I'd like to say, and it's
14 a point that Bob has been stressing all along, is that
15 solutions to the kinds of problems we're looking at
16 often don't come wrapped in the kind of wrapper that we
17 expect them to. When we approach Civil Rights problems,
18 we approach unemployment, youth unemployment, we
19 approach the depressed nature of our cities, looking
20 for the standard kind of solution that we often miss
21 things that are solutions, because they don't look like
22 what we thought they should look like.

23 Camden, New Jersey, is, as you all
24 probably know, a very depressed city. It's a city with

1
2 upwards of two-thirds of its population on some form of
3 fixed income. I think most people tend to think that
4 the solutions to the problems in Camden are going to
5 come in the big business wrapper, the solutions are
6 going to be to attract the next GM Saturn plant or to
7 attract another Campbell Soup or to address the issue
8 of racism in trade unions.

9 The fact of the matter is that if you
10 really believe that in Camden, you're sadly mistaken.
11 Camden is not going to attract another Campbell Soup.
12 They're very lucky that they didn't lose it when the
13 others ran. It's not going to become the next Silican
14 Valley, and for the kids we work with, it really doesn't
15 matter if racism and the trade unions were eliminated
16 tomorrow. It really would not make any difference
17 whatsoever to the black and Hispanic kids we work with.
18 I think the solutions are going to come in some differ-
19 ent wrappers. And if we could add something to the
20 discussion, perhaps it would be to offer some examples
21 of how some non-traditional agencies and approaches can
22 offer something to this discussion.

23 So, I'm going to show the slide show and
24 my hope is that as we watch it, we don't think of it, as

1
2 Bob said, as just a nice little -- isn't that nice,
3 they're doing some nice things in Camden and they're
4 good people, and good for them. But then maybe there
5 are some implications for what we're doing on a wider
6 scale.

7 Let me show that. It's only about five
8 minutes.

9 ---

10 (Slide show presentation.)

11 ---

12 AARON BOCAGE: Let me tell you about the
13 first year we decided to do this. We had been talking
14 about it for a long time, and finally decided that we
15 should do it or stop talking about it.

16 THE CHAIRPERSON: Who is the "we"?

17 AARON BOCAGE: The Juvenile Resource
18 Center. My partner and I basically founded it about
19 ten years ago. We are now in the private sector. We
20 decided to go ahead and jump in. We opened the lunch
21 box. We had no money. We had no right or reason to be
22 into it, except we felt it was the right thing to be
23 doing. We opened it up, and quite frankly, the first
24 year was a disaster. Every possible thing you can

1
2 imagine going wrong went wrong. We had social workers
3 in charge of the operation, and I'm a social worker by
4 training, so don't take offense, but we shouldn't have
5 had them running a restaurant. A kid would steal, and
6 the guy running it would want to counsel him. That's not
7 what we wanted done. We ended up, the bottom line was
8 we lost twenty thousand dollars in the first year, and
9 at first look, it seemed like a real disaster, and most
10 folks, when we talked about that, said, well, at that
11 point, we would have folded up the tents and run. We
12 looked at it, though, what that twenty thousand dollar
13 investment bought. We started looking at the number of
14 kids who got trained, the amount of salaries paid, the
15 taxes those kids paid on those salaries. Since we're
16 in the food business, we generated a lot of business,
17 which we did by policy spent in Camden, bread, milk and
18 so on, so we put money back into the local economy,
19 fifty thousand dollars just on vendors. We generated
20 sales taxes. We began to look at it in a different light.
21 We said, there's more to this thing than we originally
22 thought, and the twenty thousand dollars began to look
23 like it was a bargain, especially when you look at what
24 twenty thousand dollars buys in the standard government

1 CETA or JTPA training program, which is not very much.

2 The other thing we found is, as illus-
3 trated by a kid whose name is Fernando, Fernando is a
4 kid who was a classic career criminal and attitudes to
5 match. His attitude was, I will steal it from you. If
6 you don't lock it up, I will steal it, and just didn't
7 care. Something happened with Fernando in the business
8 when a lightbulb went off and he finally saw the connec-
9 tion between what he was doing, his actions, and how
10 he behaved, to what went in his pocket legally. He was
11 a different person. He became a businessman at that
12 point. He started looking at everything that way,
13 how can I make more money; what can I do to get more
14 customers in. He went from being a kid who was basically
15 illiterate, I mean, a kid who -- it was painful to
16 watch this kid take an order, ham and cheese, fifteen
17 minutes, customer is walking out the door, people in the
18 back crying. Six months later, this kid was on an
19 adding machine, and his biggest gripe was that other
20 people didn't know how to do sales taxes and why couldn't
21 we get better employees, when you add six percent on.
22 How are we supposed to run a business. And that's where
23 his head was. He actually got upset with us because he
24

1
2 felt we could be doing a better job, but he was going
3 to put us out of business. That became his goal. He
4 was going to go to his family, try to get some money and
5 open up a place.

6 The point is that that kid was changed
7 forever. He now looked at his environment a little
8 differently. We didn't change his environment. We
9 really didn't do anything to change what he had to face.
10 He still had to face the same kind of issues, same
11 prejudices and so on, but he now had something to help
12 him face that environment.

13 So, we got very turned on to this idea
14 and decided that this was going to be a major push of
15 what the agency did in the future, and it has been to
16 date.

17 The second point I'd like to make is
18 that poor cities like Camden have a lot of resources
19 that tend to get overlooked. Bob certainly has harped
20 on the fact that non-profits like the Juvenile Resource
21 Center, which is very small, very poor, in debt, a
22 board that is not powerful or wealthy, a little agency
23 is now running three businesses and contributing to the
24 economy. When we look at poor cities like Camden, there

1
2 are certain things that all poor cities have. One of
3 them is a lot of non-profits. It seems like the more
4 poverty you have, the more non-profits you have.

5 The second thing that seems to be in
6 the same relationship is churches. Camden has a lot of
7 churches per capita. The other thing that every poor
8 city has is a school board that's fairly wealthy.
9 People don't look at it that way. The City of Camden,
10 right now, there are all kinds of pollutant maneuvering
11 going on around in the city budget, people are fighting
12 and very serious pollutant battles going on. The City's
13 budget is about fifty million dollars. The school board
14 budget, which nobody even thinks about or cares about,
15 is eighty-five million dollars. I guess what I'm saying
16 is that we sometimes fight our battles in the wrong
17 places. We maintain that those are three sources of
18 economic development that are often overlooked.

19 If you look at all the non-profits in
20 Camden, if all of them did what we did with the Juvenile
21 Resource Center, it could be one hell of an improvement
22 in the local economy. If all the churches did nothing
23 but dedicate themselves to buying from minority firms
24 or hiring a minority firm or helping to create a youth

1
2 business, with all the talent in the church and the
3 money and the skills, the people come and sit in church
4 every Sunday, if that talent pool just took one kid and
5 said, we're going to put this kid up in business and
6 teach him, think about the impact that that would make.

7 The school board has got to be educated
8 to start looking at themselves as a source of economic
9 development. Camden, with all of its unemployment and
10 with all of its welfare problems, with all of its
11 unemployment problems, buys its food from Cleveland,
12 Ohio. They spend two million dollars to have food
13 come in that's flash frozen, and the kids don't like it
14 anyway. They throw half of it in the trash, and if
15 they were looking at themselves a little bit differently,
16 why not hire fifty welfare mothers. It's an ideal kind
17 of situation, part-time work. Kids can get fresh food.
18 They can begin to earn some money. There's tremendous
19 potential for everyone to benefit, but that institution
20 doesn't look at itself as having that kind of role.
21 Even if it costs more to do it that way, the kids still
22 get better nutrition, you get a better buy for your
23 dollar, and the offshoots of the taxes generated would
24 be tremendous.

1
2 So, we have to start educating not only
3 the kids, but some of these institutions that they have
4 influence, they have authority and power, and they're
5 not using it.

6 The third point very simply is we have
7 to educate our young people better. My partner took a
8 walking tour of Camden about six months ago, and came
9 back in the office shaking his head and said, "I don't
10 believe it." He walked up and down the major -- whatever
11 major is in Camden, the major business areas and said,
12 "You wouldn't believe who runs all the businesses in
13 this town." Camden is ninety percent black and Hispanic.
14 He said, Vietnamese. You walk in these stores and it's
15 Vietnamese, Orientals running the businesses. And these
16 are not people who came in the country who were generals
17 in the Army and took money out of the country with them;
18 they came in the country poor, facing speech barriers,
19 cultural discrimination, facing all kinds of problems,
20 but here they are in Camden showing up and they certainly
21 got no influence downtown. They very quietly came in
22 and the whole family is in there working fourteen hours
23 a day. Kids are right there after school taking it all
24 in, being a part of it.

1
2 But the big issue is that we got to deal
3 with kids' minds. We've got to teach kids better in
4 terms of how to participate successfully in this economy.
5 We decided two years ago, this is George Water and I,
6 left the Juvenile Resource Center. We became conscious
7 of this issue and we decided this is what we wanted to
8 do for at least the next couple of years is to preach
9 this word and help folks set up businesses and also, to
10 try to get kids better educated. We started looking
11 for material, what kind of things can we use to teach
12 kids to take advantage of what's going on.

13 In Camden right now there is the beginning
14 of an urban renewal taking place. There's some excite-
15 ment among certain people about what's going on in town.
16 Properties that were for sale are disappearing. There's
17 development plans for the waterfront. There's just new
18 excitement in the air around people who know what's
19 going on. Kids in high school should be tearing the
20 doors down to get out here and get a piece of it. The
21 fact is that they don't even know what's going on. They
22 don't know what enterprise zone means or how they can
23 get a piece out of it. They have nothing to do with
24 getting into the union, but there are ways for them to

1
2 make money off of it.

3 So, we set out looking for curriculum
4 material, there must be something out here that all
5 these kids ought to be taking in school. We found very,
6 very little, but we basically found two kinds of things.
7 One is Junior Achievement, which you won't find caught
8 dead in a place like Camden. No one wants to get their
9 hands dirty with those kinds of kids. The other is a
10 program out of Ohio State, which was funded by a big
11 grant from the federal government, and when you look at
12 it, it's nice looking and impressive, but when you read
13 it, it leaves you with one impression. Unless you're
14 extremely bright, it leaves you with the feeling, this
15 is not for me. That's exactly what you come away with,
16 this is not for me. This is either for the rich kids
17 in the suburbs or white boys. I don't understand this.

18 So, we decided that we were going to
19 develop it ourselves and became entrepreneurs, put the
20 houses up with our own money, hired writers, put
21 together a twelve workbook set of materials aimed at
22 getting kids to understand about business opportunities,
23 but also doing it in a non-threatening way. We tell
24 kids, you can make money anywhere. We believe that. In

1 this country, the sun doesn't hardly come up unless
2 money passes hands. It doesn't matter if you're in a
3 housing project or you're on a farm, there are ways to
4 make honest money. And a lot of this is stuff that we
5 grew up with. My partner and I always kind of laugh
6 and say, you know, we came up. We would probably have
7 been on the unemployment rolls. We never had jobs;
8 we never had CETA, but you made honest money. You'd
9 cut somebody's grass and you did this and you did what
10 was just natural. Something has happened between the
11 generations where kids -- I'm convinced, kids are not
12 lazy, but they just don't know how to look at something
13 and see an opportunity and take advantage of it.

14
15 So, we put this thing together, and it's
16 our goal to have this thing all over the place. We were
17 pleased with it when it came out and excited about it,
18 and among other things, we said, we're going to get
19 rich. Every school and everybody in the world is going
20 to jump on this thing and want it. Well, we certainly
21 haven't gotten rich, and the schools are very difficult
22 to sell it to. School people will tell us, it's not
23 basic skills, so I don't want to hear about it. If this
24 isn't a basic skill for these kids, I'm not sure what is.

1
2 So, we've got a real selling job, an education job to
3 do with them. They don't see this as a basic skill.
4 To me, it's as basic as anything in terms of teaching
5 kids how to survive.

6 I think I've probably taken more time
7 than I should. We remain committed to it. We believe
8 very strongly that you have to give people information
9 and give it to them in a way that they can use it. We
10 don't think, and it's not our intention that we're going
11 to have hundreds of thousands of young entrepreneurs
12 running all over the place, all over this country.
13 That's not what we think it's about. What we do think
14 it's about is opening kids' eyes. Once you open people's
15 eyes to opportunity and show them how they can take
16 advantage of it, you also open their eyes to responsi-
17 bility, and at that point, kids stop being a liability
18 and start being a contributing member of society.

19 Thank you very much for your time.

20 (Applause.)

21 THE CHAIRPERSON: My next panelist is
22 Patricia Coulter, the Director of INROADS, in Philadel-
23 phia.

24 PATRICIA COULTER: I am very pleased to

1
2 be here with you this afternoon and I'd just like to say
3 thanks to Steve. May I?

4 STEPHEN MAHON: Right.

5 PATRICIA COULTER: And Murray and the
6 other members of the Commission for inviting me here
7 today to tell you a little bit about INROADS. And I
8 find that when the word INROADS comes up, it's usually
9 one that people will say, "Oh, INROADS. What is that?"
10 So, if to date, you don't know anything about INROADS,
11 I guess part of our purpose here today is to tell you
12 what it is and to also tell you how we operate, what it
13 is that we do, why our concept is a unique one, and to
14 talk a little bit about what our success has been.

15 As I've heard from a few earlier presen-
16 ters, when we think of success, you hear so much in the
17 media, you read and see on T.V. about what's going wrong
18 and all of the bad things that our kids are doing, and
19 it's very rare to hear about such institutions as the
20 Ivy Leaf School and the Juvenile Resource Center, and to
21 hear about the positive things that are happening, the
22 success that is going on.

23 I think that one of the thrilling things
24 for me in working with INROADS is that I am working with

1
2 minority students who are highly motivated and who
3 really want to succeed and want to do something with
4 their lives, and that is very rewarding when you think
5 that all of the kids don't want to do anything with
6 their lives.

7 So, let me tell you a little bit about
8 INROADS and perhaps in your discussion of The Role of
9 Intermediate Institutions, maybe there's some role that
10 INROADS can play, perhaps a small role, in those
11 strategies.

12 There are three areas that I'd like to
13 cover. One is to give you -- tell you our mission and
14 a little bit about our history, to talk about our
15 recruitment process, exactly how we identify students
16 and corporations. And, then, thirdly, to talk about
17 our success measurement, and I've given you a handout
18 and I'll tell you what you have in your hands and cover
19 some of that information a little later on.

20 The mission of INROADS is to recruit
21 talented minority youth and prepare them for leadership
22 positions in corporate America and in the community.
23 INROADS is a national career development organization,
24 and we have been around now for some sixteen years. We

1 started back in 1970 in Chicago, and we have developed
2 a corporate readiness process that is one whereby we
3 identify students who are graduating from high school,
4 their senior year of high school, or who may be in their
5 freshman or sophomore year of college, who have an inter-
6 est in pursuing a major or a discipline in business or
7 a more technical area in college, and who think that
8 they would like to know more about business and industry.
9 I say, think, because at that age, most young people
10 don't really know whether they want to be a senior vice
11 president of Westinghouse or some other corporation.

12
13 So, we're looking at potential at that
14 point and leadership qualities, and I guess, a track
15 record, an academic track record of the young person at
16 seventeen or eighteen years old.

17 We were founded in Chicago in 1970 and
18 actually founded by a business executive who felt that
19 there was as much talent in the black and brown communi-
20 ties as there was in the white community. In fact,
21 Frank Carr, our founder, was greatly influenced by the
22 teachings of Dr. Martin Luther King, Jr., and in conceiv-
23 ing the whole idea of INROADS, he intended to begin to
24 bring about some parody in the senior levels of

1 corporate America. He felt that certainly minorities
2 had the talent, but that traditionally minority talent
3 had been diverted into the fields of education and
4 social work, and not into business and industry. So,
5 Frank's initial idea was to divert that talent, because
6 it's not that minorities are just now becoming talented
7 people. That's always been a given.

8
9 INROADS is totally funded by corporations
10 and we have grown since 1970 from the one city and
11 twenty-five college interns and seventeen corporations
12 today to twenty-six U.S. cities, fifteen hundred and
13 sixty-five college interns and seven hundred and thirty-
14 one corporate sponsors.

15 To talk briefly about Philadelphia, we've
16 been in business here for five years. We started here
17 in 1981, and that year we also had seventeen initial
18 corporations who sponsored twenty-four college interns.
19 Philadelphia has been one of our more successful cities
20 at INROADS in that we have experienced significant growth
21 over our five-year history.

22 Last summer, we had forty-three area
23 corporations sponsoring a hundred and nine college
24 interns, and this year, we are expecting to have fifty-

1
2 three area corporations sponsoring a hundred and thirty-
3 five college interns. So, we have been, in fact, the
4 fastest growing city in INROADS history. I think the
5 business community here, as well as the educational
6 community, are to be complimented because it is those
7 two entities that help us do what we are about, and
8 INROADS is certainly a partnership that is bringing
9 together various organizations.

10 Secondly, let's talk a little bit about
11 the recruitment process in INROADS. You've heard me
12 mention corporate sponsors and the fact that we are
13 totally funded by corporations. In all of our cities,
14 we don't receive any government funds. We exist on
15 corporate contributions and corporations actually pay
16 to our organization a fee for sponsoring interns. And
17 what INROADS does is recruit young people with the
18 potential for success in management in these corporations.
19 We have an approach that is one of early education, so
20 rather than waiting until they're graduating from
21 college and then challenging them into careers in banking
22 or finance or what have you, INROADS is backing it up
23 all the way to the senior year in high school, taking
24 the students as they are coming out of high school and

1 moving into college, providing them -- actually matching
2 them with a local corporation in a career-related intern-
3 ship. So, we are looking very early on and people say
4 to me often, isn't that a little early to decide whether
5 someone is going to be an engineer or a banker or an
6 accountant? We say, no, that is not too early. We
7 find out that many of the students come to us and they
8 think that they would like to be these things. "I'd
9 like to be an engineer. Well, I don't know that much
10 about it, but it sounds like it would be a good career
11 for me. I have good math skills. My counselors told
12 me about it or I've met an engineer," or what have you.
13 It's a very good age, in fact, to expose young people
14 to the types of careers that are available.

15
16 If there is one key word that INROADS
17 brings with it, it is exposure. We are exposing young
18 people to careers in business and industry. We match
19 them with a corporation and then INROADS will provide
20 for those students training and developmental activities.
21 And the training is a very, very big part of what we
22 do, because in our training, we are taking these young
23 people and teaching them, I guess you might say, the
24 ropes of business, what is actually going on there so

1 that they don't complete college and move into a
2 corporate setting and experience cultural shock because
3 they didn't know that in business one must work hours
4 other than nine to five, or that they didn't know that
5 there is a certain code of dress that is appropriate
6 in the corporate environment, because in the textbooks
7 that they study at Drexel and Temple and the other
8 schools, those types of concepts are not mentioned
9 there, so no matter how competent they may be coming
10 into the work setting, if they don't know some of the
11 unwritten rules, then they may be limited somewhat in
12 their success or maybe I should say not necessarily
13 limited in success, but it may take them a little
14 longer to reach that pinnacle of success than if they
15 know these unwritten rules going in. But INROADS is
16 really providing an edge for minority students to move
17 a little quicker into the corporate mainstream.

19 The training is very, very significant
20 to the development of the young person, but in addition
21 to training, we are also providing supportive services
22 to the student throughout the year, so that in the summer
23 our students are working in corporations, and they work
24 regular jobs, go in early in the morning, and they work

1 through the evenings, and in many instances on Saturdays,
2 on weekends. They're involved in INROADS training
3 seminars and workshops where they're learning various
4 things about communications skills, time management and
5 money management and all these types of activities.
6

7 Then, during the school year, we are
8 right there with them to monitor their academics as they
9 go through college, because one of the things that we
10 have found that we identify a very bright young person
11 coming out of high school, may be number one in their
12 class, or number two, and what have you, and they come
13 out of a school in Philadelphia and they go to Drexel
14 or they go to St. Joe's or to the University of Penn,
15 and all of a sudden they realize that, gee, you know,
16 everybody else is ahead of me. I was smart in high
17 school. I was the best in my class, but all of a sudden
18 I am one of very many, and other students seem to be
19 ahead of me.

20 I had a student that is one of my success
21 stories that I'll tell you about quickly. I met this
22 young man at Bartram High School in 1981. He's one of
23 the original class that I recruited here in Philadelphia.
24 He was number one in his class at Bartram, a very strong

1 student, had been accepted to the University of
2 Pennsylvania on a full scholarship in engineering, and
3 he was very proud and pleased, and his family was
4 pleased that he would be entering Penn in engineering,
5 and he was selected by Bell of Pennsylvania for the
6 INROADS internship. He liked it there and really had a
7 great first summer. In September, he went to Penn and
8 I visited him, because we visit our students throughout
9 the school year on a monthly basis, and at the end of
10 September, I went over to Penn to visit with Barry, and
11 he and I met and sat and began talking, and he was very
12 frustrated. And I was in a counseling role, you're
13 trying to figure out what is it that's bothering him and
14 trying to pull different things from him, and finally,
15 he burst out and he said, "You know, I was not prepared
16 for college." He said, "I don't know if I belong here.
17 I don't think I belong here." And all of a sudden I
18 could see all of the pride that I had seen back in June
19 when he graduated from Bartram and being number one, with
20 all A's, coming out of high school, feeling so proud and
21 pleased, to hear a few months later he was very frus-
22 trated and depressed because all of a sudden he's feel-
23 ing as though he doesn't belong. And part of what he
24

1 was going through is very, very natural, particularly
2 for a minority student who moved into some of the more
3 competitive and larger colleges and universities where
4 they find all of a sudden that they're competing with
5 other students, non-minority students, who are coming
6 from the best academies and from the best schools in
7 the country. So, all of a sudden Barry realized, "I've
8 got a lot of catching up to do."

10 At that point, it became part of our
11 counseling and support system to say to Barry, "You
12 don't have anything to worry about, because you can do
13 it, number one, but it's going to take extra work from
14 you. You're going to have to look at a situation,
15 analyze it." The first thing we had him do was move on
16 campus. He was trying to commute. So, he was going
17 home and taking care of his family, coming to school and
18 trying to study engineering, and he had a lot of differ-
19 ent things that he was trying to juggle and still make
20 it in college. So, we began to come up with some
21 techniques or some strategies that he could apply to
22 help get through the academic rigors of the University
23 of Pennsylvania, and particularly the field of engineer-
24 ing.

1
2 So, Barry is just a small, little story,
3 because he did successfully complete Penn and just
4 last year, he accepted a full-time position with the
5 Bell of Pennsylvania Company, and he is right now in
6 their management training program, which is designed to
7 move those young people with potential into fast track
8 management. So, he's doing quite well now and I'm
9 very, very proud of him.

10 But I told you that little story just to
11 demonstrate the importance of the support as these
12 young people move through college. You just can't give
13 them a summer job and think that that is going to
14 answer all of the questions. There's more to it than
15 that. There must be that follow-up, that follow-through,
16 and in our organization, we identify students very early,
17 coming out of high school, following them through college.
18 For many of them, I feel like I've watched them grow up,
19 because I see them come out of high school fairly
20 immature and then I see them enter the professional
21 work world, and it's a very, very rewarding experience
22 to watch them grow in that manner.

23 In our recruitment, as we look at identi-
24 fying students, we go into all of the area schools.

1 We're not limited in terms of the types of schools that
2 we can recruit from, so we do recruit in public schools,
3 private schools, parochial schools, suburban schools.
4 In fact, we really comb the area looking for talented
5 minority students.
6

7 This year in Philadelphia, we received
8 three hundred and eighty applications. I'll tell you
9 a little bit about the competitiveness of our selection
10 process. We gave presentations to about six hundred or
11 more students this year, received three hundred and
12 eighty applications. We invited a hundred and twenty-
13 eight of those students to be a part of what we call our
14 talent pool, and these students are from all over the
15 Delaware Valley and they are selected to interview with
16 area corporations who are providing INROADS internships
17 for some sixty-two internships that we have available.
18 So, it is a very, very competitive position for students,
19 and I guess for anyone that gets into our talent pool.
20 Probably their first lesson in business is that it is
21 competitive, and they realize right away that, oh, gee,
22 yes, I'm very good and I'm top of my class, but at that
23 talent pool career weekend, they're probably sitting
24 beside someone else that was at the top of their class

1
2 at another school, and they realize very quickly that
3 they will both probably be competing for the same
4 position.

5 But it is a very real concept and one
6 that we want our people to begin to know more about.
7 So, for the sixty-two that will be selected this year,
8 and they are right now in the interviewing process, they
9 will join the students returning from last summer and
10 that will give us our total of a hundred and thirty-five
11 students for INROADS this particular year.

12 INROADS does have standards, and once a
13 young person is selected for an internship, in order to
14 remain throughout the four years, they must perform well
15 on the job and in school and in college. So, we do
16 monitor them both on the job and in college, and we do
17 have standards that may be a little stiff, but we, again,
18 feel that we are a training organization. And in
19 training these young people for the world of business,
20 and particularly corporate America, we find that those
21 demands will come upon them later, so we want to begin
22 to indoctrinate them at this point as to what to expect.

23 In your hands you have our latest annual
24 report, and I'll just call your attention to a couple of

1 things here, and that is a little bit about our success
2 measure, how we measure success. I mentioned that we're
3 totally funded by corporations, and we find that our
4 success rate is fairly high and that may have something
5 to do with why we are now in twenty-six cities across
6 the U.S. But on the highlight page, you see the very
7 first block of blue graphs, our college component in
8 '85 and you can see the growth rate over the last five
9 years. We did have seven hundred and thirty-one spon-
10 sors in '85, fifteen, sixty-seven interns, and the next
11 two columns are very important to us, because this is
12 how we measure success. We graduated a hundred and
13 sixty-seven interns in 1985, and one hundred and twelve
14 of them were hired by INROADS sponsors. So, that makes
15 us almost seventy percent successful in '85. Since we've
16 been in existence, we've been between sixty and eighty
17 percent successful, and that we feel is probably the
18 key to this particular concept working. These young
19 people are moving into full-time positions with their
20 companies. I also put in your packet our alumni
21 employment roster, and this is just for the northeast
22 region of INROADS, which consists now of eight cities,
23 but only three of those cities have graduated students.
24

So; you'll see Pittsburgh, Philadelphia and West Virginia.

Those are the only three cities of the region states who have graduated students. And you can see some of the types of careers that these young people are moving into. Many of the companies are local Philadelphia companies or many of them are from Pittsburgh, because that's the oldest city in our region, and probably, with Steve being here today, I'll give Westinghouse a plug, but Westinghouse is one of our largest corporate sponsors nationally, and I believe the largest sponsor in the Pittsburgh area.

So, our success is measured by students who go with their sponsors upon college completion.

The other piece is just for your information, just to give you spare reading time or whatever, to hear a little bit from the INROADS students themselves, what they think about INROADS, what it means to them, because we find that it's more than that summer work experience; it's really teaching them the ropes of corporate America, and I guess, in very succinct terms, INROADS is teaching minorities respectfully how to play the corporate game, because we find that that is very important for them to succeed in that arena.

I thank you again for having me here and will be happy to answer any questions that you have.

(Applause.)

THE CHAIRPERSON: We've really put a lot of stuff on you in the last hour or so, and I thought that this might be an opportunity to ask some questions or to comment or to maybe even rough it up a little bit with several of the people here who have been presenting this concept of Intermediate Institutions and the specifics of how this has been implemented.

I'm going to start it off first. Keep in mind that I'm suggesting you address your questions to Bob Woodson, Miss Green and Mr. Bocage and Miss Coulter, but I'll start off with the first question.

Miss Green, on this Ivy Leaf School, which you've indicated is so successful in terms of bringing minority group children into higher scoring on testing and in terms of college admissions or at least school admissions, is this a result of the special techniques you're using, or is this especially characteristic of the clientele? In other words, are you getting upper class, wealthy kids who generally do better?

LILLER GREEN: We have a mixed population

1
2 at Ivy Leaf School. We have a number of children from
3 professional families. We also have children where
4 several members of the family are pooling together in
5 order to be able to --

6 THE CHAIRPERSON: Why don't you come up
7 here.

8 LILLER GREEN: The tuition is one thousand,
9 six hundred dollars a year, paid on a monthly basis, a
10 hundred and sixty a month. A question was asked about
11 the school population. We have a mixed school popula-
12 tion. We have a number of children from professional
13 families. We also have children from families that two
14 or three members of the family are pooling their
15 resources in order to send the child there, and we also
16 have a few children that are receiving some type of
17 assistance. I don't know the number of children in each
18 category, because we do not have a research study, and
19 we don't take that time to look at the economic back-
20 ground, so that I can't give you, you know, a full
21 picture, but we do have a mixed population.

22 THE CHAIRPERSON: Any other questions?
23 Ben?

24 BENJAMIN STAHL: I assume that non-profit

1
2 groups and other groups are dealing with a non-specific
3 population of minority children in Philadelphia to come
4 up with good results. I've learned things. My concern
5 is what they learn in terms of new methods, new
6 approaches, new philosophies, etcetera, can be applied
7 to the mass of students in Philadelphia and Camden and
8 every other city, and how they get motivated and how
9 they get on track. There are things that were accom-
10 plished. I heard a report over the weekend of a high
11 school, whose name I forget, which had the advantage
12 of having a rich alumnus come up, and it's a typical
13 high school with fifty, sixty, seventy percent dropouts
14 in a low income area and so on. He said, every student
15 that finished that high school, he would give a full-
16 time scholarship, and the dropout rate is now zero.
17 These kids now have the motivation.

18 My concern here is, how would you have
19 done it with a non-profit institution? I'm on many
20 non-profit boards, so I support their role in our
21 society. How can that be applied to the mass of students
22 in our school system without the underriding tone that
23 I've heard that school districts are lousy, school boards
24 have too much money, we got to get rid of them, and are

1
2 proposing a new alternative for the public schools.

3 LILLER GREEN: First of all, what we
4 are doing is not in competition with the public
5 schools. I feel that everyone can learn from someone
6 else. I think there are things that public schools can
7 learn if they looked at other resources. They receive
8 lots and lots of tax money, and I think that that money
9 could be used to broaden the base and to approach the
10 work with our children in a different manner.

11 I just told you that I was a member of
12 an elementary education study group, and everybody
13 agreed that what we're doing is really exciting and
14 serving a very important need. There was no effort
15 to say, well, let's look broader. Let's see if we can
16 -- is there any way that we can examine the success
17 story and broaden the base. And, we have finished our
18 meetings now, so I think that's the end of it. That's
19 an example. I'm certainly free, and I think this is
20 what Bob was talking about. When you find the success
21 stories that are going on, the power structure is not
22 interested. That's the bottom line.

23 ROBERT WOODSON: Let me comment. We've
24 got to look at the rules of the game. The winners and

1
2 losers in any situation are always against the rules of
3 the game. If Aaron does not perform and serve the high
4 risk kids successfully, he's out of business. If Liller
5 does not successfully teach those children, the parents
6 will not send their children there and she and her
7 husband will be looking for jobs, and her sixty teachers
8 will be pounding the pavement. If Pat Coulter doesn't
9 do the job, if her success rate was twenty percent,
10 business people are very clear, they will not continue
11 to fund her. And so, the same with my organization,
12 eighty percent of our funds come from private sources.

13 The point is, a lot of the existing
14 institutions, including the schools, don't have to
15 compete. They are not responsive to the parents who
16 send their children there; they are responsive to the
17 school boards. So, as long as their people supplying
18 the funds at the corporate level and the government
19 continue to fund them and they are a part of the budget
20 allocation process and not responsive to the students,
21 they're going to continue to get raises when, in fact,
22 their performance fails, and this leads, probably, into
23 Chuck's panel. But I find it fascinating that people
24 closest to the problem or the opportunity probably know

1
2 more about outcomes, and teachers, as I debated Mayor
3 Futrell last week, and I said, wouldn't you agree that
4 public school teachers know more about education than
5 any other professional group? She said, absolutely.
6 I said, then, why is it that public school teachers
7 send their children to private school in twice the
8 number the general population? Forty-three percent of
9 all public school teachers living in Chicago send their
10 kids to private schools, and even a higher percentage
11 of black teachers send their kids to private schools.
12 Michigan, twenty percent of all public school teachers
13 send their kids to private schools, when the general
14 population sends only ten percent. So, that says more
15 to me than any appeal to compassion or anything else.

16 So, it seems to me that in social
17 policies, that we have got to change the rules of the
18 game so that the money goes to the parents so that they
19 can select where their children should be educated and
20 then, let everybody compete for the parents the way
21 the private market operates.

22 American business would never operate the
23 way our public institutions do that serve the poor.
24 It's like a football team that loses a game every season

1
2 and every year, and the coach gets a bonus and each
3 team member gets a raise every year. So, what are we
4 rewarding? It's a long way of saying that we've got to
5 alter public policy so it's more market-like, so that
6 people who perform and are successful in helping the
7 poor will get rewarded and those who are not performing
8 will get punished. Very simple principle. Try to
9 apply it. You'll end up like Liller.

10 The Department of Education is like any
11 other bureaucracy, it knows Liller Green's success, but
12 there is no inclination on the part of the bureaucrats
13 who control the research agendas in America to study
14 her success. Suppose they found out that Liller
15 Green's approach and other like her were more successful
16 than the public schools, and sixteen hundred dollars
17 ain't a lot of money, so that what would happen, though,
18 because the rules of the game would have to be changed.
19 So, it's better not to know.

20 PATRICIA COULTER: If I could add one
21 thing on to that issue. This morning, Carl Singley
22 mentioned the idea of expanding the black leadership
23 beyond politicians, and he talked about that briefly
24 this morning. And in our organization, small as it may

1
2 be in terms of the quantity of young people that we're
3 serving, but part of the mission of INROADS, I don't
4 know if you heard me clearly, we're preparing leaders
5 for corporate America and the community, and that is
6 very, very important to us, because what we find that
7 we're doing in working with these young people and
8 moving them into corporate responsible positions, we
9 want them to become role models. We want them to be
10 the ones to reach back and to open up some doors and
11 to begin to make things happen in that arena for other
12 minorities. So, I listened very intently this morning
13 as he was talking about expanding the black leadership
14 because it, in fact, could be leaders other than poli-
15 tical leaders that we can begin to look to in the
16 future, and we begin to name black leaders right now,
17 as he said this morning, we'll probably come up with
18 politicians as being our leaders. But the development
19 of leadership becomes very important in our young
20 people at an earlier age, and I think just looking at
21 the different types of schools and organizations, our
22 focus has to also be on that type of leadership develop-
23 ment as they move along.

24 THE CHAIRPERSON: We are actually

1
2 beginning to impinge on the next session with this
3 question, because as you know, the really hot potato
4 issue that we're bringing to the table in the next
5 session is the issue of private schools and vouchers
6 for the poor, etcetera.

7 Any other questions? John Binkley.

8 JOHN BINKLEY: I'd like to ask Miss
9 Green if she has contacts with schools of a similar
10 nature around the country. Is there an association or
11 a group? I know there are some fine academies. This
12 morning, we were talking about an association of
13 administrators that I've never heard of before. Miss
14 Coulter comes from a group named INROADS, a national
15 organization. Are you associated with one?

16 LILLER GREEN: Well, I think until Bob
17 Woodson's neighborhood organization brought two hundred
18 and fifty schools together, we were not aware of the
19 other schools. I think it's because we operate on a
20 shoe-string budget and we are young and struggling
21 schools in comparison to your much larger schools, so
22 that there is no organization at this point. I would
23 hope that at some point in the future that we will be
24 able to organize, because we could benefit from an

1
2 organizational structure in terms of buying insurance
3 plans together and ordering supplies and that kind of
4 thing. But there is no organization at this time.

5 ROBERT WOODSON: We are banging on the
6 same corporate doors as Pat has banged on to establish
7 such an organization, but it's a difficult struggle,
8 because we are opposed by the NEA, by everybody who is
9 supposed to be concerned about the poor. And some of
10 our independent schools take only children thrown out
11 of public schools and are able to teach them success-
12 fully. But it is a struggle to even get anyone to pay
13 attention to these kind of efforts. So, we're trying.
14 We hope to have an association of independent neighbor-
15 hood schools, and we use that terminology to distinguish
16 us from the private academies that -- see, one of the
17 major criticisms is because those schools charge five
18 or six thousand dollars, and Liller would say, she
19 wishes.

20 LILLER GREEN: I sure do.

21 THE CHAIRPERSON: Well, I want to ask
22 what I think might be a hot potato question and possibly
23 even a political one. I've been very much aware of the
24 fact that the idea of Intermediate Institutions and the

1
2 concept of using the volunteer talent and neighborhood
3 talent cannot probably function only on its own. And
4 it does need, sometimes, governmental support. How do
5 you factor in the government in such effort, Bob? Do
6 you consider government to play a role, or is it, you
7 know, sort of virginal and pure that you don't go near
8 the government thing? What's your reaction to that?

9 ROBERT WOODSON: As a pragmatist, I don't
10 rule out any source of support. But our position is
11 that we think there should be a declining government
12 role, and secondly, the issue is not always whether
13 government is in. It's how government exercises its
14 responsibility. The government traditionally exercises
15 its responsibility by directly supporting and controlling
16 and credentializing and certifying programs that help
17 the poor as we did in the poverty era. We think that
18 what government can do constructively is what Liller
19 pointed out. Government could use some of its research
20 resources to study successes of these local mediating
21 institutions, document that, publish it to the community
22 at large and say that they are alternatives that are
23 working. Government could also help to inform people
24 about alternatives such as vouchers. I think government

1
2 can change the way it operates.

3 Thirdly, government at the local and
4 state level could look at what are the administrative
5 and legislative barriers to people helping themselves.
6 As I said, certification, a lot of the rules that forbid
7 volunteers -- the public school system. The problem
8 is you got good teachers there, you got some good prin-
9 cipals, but a lot of them are saddled with work rules
10 imposed by non-educators, such as unions, about the
11 use of the facilities. For instance, parents cannot
12 come in and volunteer to paint, to clean up and become
13 part of the public schools, because there are restric-
14 tions and limits to it; whereas, in an independent
15 school, they do fund raisers. They come in and paint.
16 They come in and fix up when something is broken. In
17 other words, there is a sense of ownership. They can
18 use their school facility for funerals, for weddings,
19 so that the school becomes a part of the community.
20 Try doing that in the local public school.

21 There was a time in our past that public
22 schools could do that, and so that I think it's time
23 for government to examine some of the limitations that
24 policy imposes. Day care, for instance, eighty percent

1
2 of all the day care is done outside of the law because
3 of the crazy tangle of zoning restrictions. You can
4 have ten children of your own, but you cannot care for
5 six children of your sister's without putting a fire
6 escape on your house. Now, if you've got the money to
7 put the fire escape out there, fine. You probably
8 wouldn't be living in that community, or there's another
9 zoning regulation that now you're commercial property
10 and you can't put a fire escape up there. So, in
11 Washington, D.C., under the existing laws, you can open
12 a day care center between two topless bars in the
13 commercial district, but not in a church, in a residen-
14 tial community. There's something crazy about that.

15 Government can do a lot about analyzing
16 those kinds of barriers, publishing it, soliciting law
17 makers to change it. So, there's a lot the government
18 can do other than intrude in people's lives with
19 bureaucratic approaches to their problems.

20 I'd just like to add before we leave that
21 I think Pat's comment and what she's doing is very
22 important and compliments the work of intermediary
23 instructors even among low income people, because in the
24 data that I saw, only one out of six whites who define

1 themselves as middle class work for government. Three
2 out of six blacks who are middle class work for govern-
3 ment, and that directly influences the limits that are
4 on someone's wages when you consider in the private
5 market there are no limits to where one can go up to a
6 point, but at least the ceiling is higher. But in
7 government, you're limited by, you know, your level and
8 whatnot, so -- and seventy percent of all graduate
9 degrees issued at black colleges, even today, are in
10 education and social science when that only represents
11 about three point eight percent of the future job market.
12 So, our black colleges where most of our students are
13 going, are running away from the economy, so that your
14 efforts are very, very important to help move more of
15 those young people into the private part of the
16 economy, so I compliment your work.

17
18 PATRICIA COULTER: Thank you.

19 THE CHAIRPERSON: Thank you very much,
20 Bob Woodson, Liller Green, Aaron Bocage and Pat Coulter.
21 We're in your debt for some very, very fascinating
22 insights into this whole process of developing new
23 techniques for dealing with the problems of minorities
24 and, perhaps, the poor.

I hope you'll stay around a little bit, because we're coming now to, perhaps, the most controversial of our aspects of the day, and that is the question of Educational Vouchers, Implications for Civil Rights.

Charles would you come on up here, and I don't know Mr. Morabito. Is he here yet?

(No response.)

THE CHAIRPERSON: We were hoping that we would have him with us. I hope he'll come in shortly.

Ladies and gentlemen, this is Charles O'Malley, who is the Special Assistant to the Secretary of the United States Department of Education, and he will launch us into a discussion of Educational Vouchers, Implications for Civil Rights.

I should point out to you that this is a grouping convened by the Pennsylvania Advisory Committee of the U.S. Civil Rights Commission, and we are compiling a record of statements here to guide the U.S. Civil Rights Commission in what we call new strategies for Civil Rights.

CHARLES O'MALLEY: I'm Chuck O'Malley, Executive Assistant to the Secretary for Private Education with the Department of Education.

What I'd like to do this afternoon is to briefly touch on my own background, talk about vouchers in general, talk about the role of my office, the Administration's Chapter One Voucher Proposal, a very brief profile of private elementary and secondary schools, and then the implications of our proposal on Civil Rights activities.

My own background, I taught and coached in Catholic elementary schools for about seventeen years, worked with the State Catholic Conference and worked as the Commissioner of Education's liaison for private schools with the Florida Department of Education for six years before coming up to Washington in my present capacity a little over three years ago. And, in that capacity, among my responsibilities are to try to promote a better and stronger relationship between public education and private education.

Personally, my children have gone to public schools in Florida, and my daughter is now in Mount Vernon High School in Alexandria, Virginia. My fifteen-year old son is in Bishop Byerton High School, an all boys Catholic high school in Alexandria, Virginia. Each of them serves my children's needs very, very

1
2 commendably, and there is no activity that I would under-
3 take that I would willingly want to get involved that
4 would hurt public education. We need public schools; we
5 need private schools.

6 As far as vouchers in general are
7 concerned, really when we're talking about vouchers,
8 we're talking about parental choice within the community.
9 It is the role of the people administering vouchers to
10 provide the parents with some type of a chit or money,
11 information about the program and, hence, how to
12 select the schools, whether it's a public school or a
13 private school.

14 There are different types of vouchers
15 and different types of choice. There are various types
16 of programs around the country. In the New England
17 states, we have voucher programs in New Hampshire and
18 Vermont where in many of the smaller districts there
19 aren't any public high schools. The state pays the
20 full tuition for children to attend private schools in
21 the area. That's been going on for some twenty-five
22 or thirty years without any types of major or even minor
23 problems that we're aware of.

24 We have other types of choice programs

1
2 getting off the ground in Tennessee where the governor
3 down there is pushing for an open enrollment, a choice
4 type of program, where students can switch from one
5 school district to another school district. Similar
6 programs are being seriously pursued in Minnesota and
7 in Colorado, and then yet we have the magnet school
8 concept, which is another form of choice.

9 The Administration's Voucher Proposal
10 dealing with Chapter One of the Education Improvement
11 Consolidation Act, it's a compensatory education
12 program, but what I'd better do there is to give you
13 a little bit of background about the Education Improve-
14 ment Consolidation Act. Actually, it was changed to
15 the ECIA back in 1981. The original Chapter One was
16 formerly Title One of the Elementary and Secondary
17 Education Act, legislation passed by Congress back
18 in 1965. There were several titles in that act. Title
19 One dealt with compensatory education. Title Two dealt
20 with the provision of audio-visual material equipment
21 to public and private school children. Title Three
22 dealt with creative and innovative types of programs.
23 Title Six dealt with special education. Title Seven
24 with dropout prevention and many other different types

1 of programs. Then, in 1981, with the change of adminis-
2 tration, the Reagan administration consolidated many of
3 the programs into the Education Improvement Consolidation
4 Act with two distinct chapters. Chapter One is the
5 old Title One program, and Chapter Two is a combination
6 of several other different federal programs.
7

8 Chapter One deals with educationally
9 and economically disadvantaged children. The formula
10 used by school districts or LEA's varies from district
11 to district and from state to state. Included in the
12 criteria for determining whether or not a child is
13 eligible for Chapter One services are things such as
14 aid to families for dependent children formula, food
15 stamp participation, the free and reduced school lunch
16 program, and educational test scores.

17 Back in 1970 or actually in '65, when
18 the legislation was first passed, the Office of Educa-
19 tion used the 1960 census data to determine where there
20 were high concentrations of educationally and economi-
21 cally disadvantaged children using these criteria. They
22 selected target schools, public schools where there was
23 the highest concentration of these children, and then
24 they zeroed in, let's say, here in the City of

1 Philadelphia, there might have been twenty target
2 schools, they zeroed in on those schools that had the
3 greatest educational needs or they might have cut it
4 down to about ten schools, and the children in first,
5 second and third grade would have been probably dele-
6 gated or appointed as Chapter One, Title One children.
7 Those children would be eligible to receive remedial
8 reading, remedial math services, speech therapy, several
9 types of diagnostic testing, and so on.

11 If a child attended a private school and
12 lived in one of these areas, and normally would have
13 attended one of those ten target schools, then that
14 child attending the private school would be considered
15 eligible for the Title One services. The allocations
16 were made to the districts based on the total number of
17 school-age children; not just the number of children in
18 public schools, but the total number of school-age
19 children in a particular community, and all of the school
20 districts received their allocations based on that
21 concept.

22 There are some five million children
23 currently being served under Chapter One, and until the
24 Felton Decision reached by the U.S. Supreme Court last

12 The amount spent per pupil in Chapter
13 One varies, and we're talking about the federal contribu-
14 tion for compensatory education. The figure nationally
15 is about six hundred and seventy dollars for a Chapter
16 One allocation for a child. In Philadelphia last year
17 it was about five hundred and fifty; in Pittsburgh, it
18 was about eight hundred and seventy-five. New York
19 City was around eight, sixty. Buffalo was up to sixteen
20 hundred. D.C. was about nine, eighty, and Chicago about
21 five hundred and eighty dollars.

24 CHARLES O'MALLEY: Per pupil expenditures

1
2 for Chapter One. Now, this is over and above the state
3 and local contribution to educate a child.

4 Now, with the voucher, the district would
5 inform the parents, only those parents whose children
6 were going to receive the services; not those that were
7 considered eligible, but only the children who are
8 actually to receive the Chapter One services, which is
9 probably about a third of the actual number of children
10 eligible to receive the services. Historically, no more
11 than forty-five percent of eligible children have ever
12 received the Chapter One services.

13 Then, the parents have several options
14 once they've been advised by the school district that
15 the voucher is in effect. They may, if they are satis-
16 fied with the program at their public school, just stay
17 on and continue to receive the Chapter One services, or
18 if they're satisfied with the program at the private
19 school they're attending, they would just stay on and
20 receive the Chapter One services. In other words, there
21 would be no change.

22 If, however, they feel that a change
23 of environment would help the child, then they have
24 several options. They may go to another public school

1 within the district if the school board policy permits
2 it. They may go to a public school outside their
3 district, and the Chapter One voucher money would be
4 used to offset the administrative and transportation
5 costs. Or they may choose to go to a private school or
6 parochial school and use the voucher money for the
7 tuition.
8

9 So, taking a situation here in Philadel-
10 phia here with the voucher amount of five hundred and
11 fifty dollars, the parents could use that five hundred
12 and fifty to handle the administrative costs or trans-
13 portation going to a public school outside their
14 district or to apply it towards the tuition of a private
15 or parochial school.

16 Now, there are individuals who say that
17 the five hundred and fifty dollars wouldn't buy much
18 of an education at a private school. Here in the
19 Archdiocese of Philadelphia, there are two hundred and
20 forty-seven parish elementary schools. Seventy-seven
21 percent of those two hundred and forty-seven schools
22 have tuitions less than five hundred dollars. Fifty
23 percent have tuitions less than four hundred dollars.
24 The national average for private elementary school

1
2 tuition, and most of the kids receiving Chapter One
3 services are in elementary schools, so I'm targeting
4 in on the elementary schools, the national average is
5 about six, eighty-three of tuition, contrary to what
6 many people believe about high tuition private schools.
7 There are high tuition private schools, but they only
8 constitute about eight to ten percent of the total
9 private school world.

10 Once the parents have made their choice
11 as to where to send a child, then the voucher is provided
12 to the parents and the arrangements are made with the
13 help of the local school district, the private school
14 administrator, and then the parents.

15 The legislation has strong Civil Rights
16 language and it is duplicate of the language that was
17 worked out in committee by Senators Bradley, Moynahan,
18 Packwood, Dole and Bradley, when we were working on our
19 tuition tax credit legislation a couple of years ago.
20 The original language that we had on our tax credit
21 legislation did not satisfy Senator Bradley in particular
22 and he and these other individuals worked very closely
23 with the administration, with the private school groups
24 and other agencies in strengthening the Civil Rights

1 language, and we have the same exact language in our
2 voucher proposal.

3
4 A couple of -- well, let's have a little,
5 brief profile about private schools. There are a lot
6 of myths about private schools. There are over five
7 million students attending private elementary and
8 secondary schools, twenty-eight thousand schools,
9 twenty-five percent of the schools in the country. One
10 out of every fourth school in the country is a private
11 school. Twelve percent of the students, one out of
12 every eight children attending school is in private
13 school. Two-thirds of all these children are in
14 elementary schools. Three and a half million are in
15 nine thousand catholic schools or fifty-six percent of
16 the private school enrollment is in catholic schools,
17 and they constitute thirty-three percent of the schools.
18 The other private schools, we have the Lutheran, the
19 Episcopal, the Jewish day schools, the Christian Funda-
20 mentals, Evangelical, Amish, Independent, the Alternative,
21 Black National, Hispanic, Home Schooling and several
22 other different types of private schools.

23 Another myth, only about thirteen percent
24 of private school parents earn thirty thousand dollars

1
2 or more. Sixty-five percent of private school parents
3 earn thirty-five thousand dollars or less. Forty-three
4 percent of these parents earn twenty-five thousand
5 dollars or less. Private school parents are not the
6 wealthy, affluent types of individuals that the media
7 sometimes would have you believe.

8 Sixteen percent of private school enroll-
9 ment is constituted of minority children, and that is
10 considerably higher in the inner city areas. With
11 respect to the governance or regulation of private
12 schools, only about half of the states have some type
13 of a mandatory accreditation or approval mechanism.
14 Only thirteen states have mandatory teacher certification
15 requirements for private school teachers. Six of those
16 either have exemptions for certain types of private
17 schools or they say they cannot enforce the regulations
18 or statutes. Thirteen states have no provisions at all
19 for teacher certification for private school teachers.

20 Now, why Chapter One vouchers and what
21 are the Civil Rights implications? The concept, although
22 the state has a legitimate and important role in
23 educating the child, we believe that the parent has the
24 ultimate responsibility and should have significant

1 choice as to where and as to how that child is being
2 educated and what that child is being taught. Low-
3 income parents do not have that type of choice that the
4 middle and upper income parents do have. The upper and
5 middle income parents have choice. They can send their
6 children to private schools or they can exercise the
7 choice of station wagon by moving out to a suburb and
8 sending their children to a, I guess you could call it
9 a semi-private public school, but the low-income parent
10 doesn't have that choice. Our proposal, we believe,
11 increases the choice. It's not a perfect proposal. It
12 doesn't give the complete flexibility we would like to
13 see, but it is definitely an improvement and it does
14 give the low-income parent the opportunity to free his
15 or her child from an environment in which they are
16 completely dissatisfied.

18 And where are we now with our voucher?
19 We have forty-five sponsors, all Republican. We are
20 looking desparately for Democrats and we have some key
21 Democrats, moderate to liberal Democrats ready to sign
22 on the legislation because of the social justice impli-
23 cations, and we believe it is a matter of social justice.

24 Three years ago when we came to Congress

1
2 with this legislation, we had two sponsors, one in each
3 House. Right now, we have about twenty groups ranging
4 from conservative groups to liberal groups and Civil
5 Rights groups supporting the legislation. The National
6 Association of Neighborhoods we hope will be coming on-
7 board. That is not Bob Woodson's group; it's a separate
8 group. The National Catholic Conference for Inter-racial
9 Justice, a very liberal group, has come out very strong-
10 ly in support of the legislation. The United States
11 Catholic Conference, the Missouri City Lutheran Schools,
12 all of whom have been in the forefront of desegregation
13 the past twenty years. Three years ago, we didn't have
14 any groups supporting the legislation. The only person
15 going up to Congress speaking in support of the legisla-
16 tion was the then Secretary of Education, Terrell Bell.

17 We had our first hearing about six weeks
18 ago and I think we came out fairly well. There was no
19 vote taken, but I think people are taking a very good,
20 hard look at the issue of choice. I know Pennsylvania
21 State University is running a seminar this summer with
22 about three hundred school administrators on the question
23 of choice. A year or so ago, that type of an agenda
24 would not have been conceived of.

1
2 We believe our legislation is constitu-
3 tional. Our Justice Department has gone over it. Then,
4 a Congressional research service, an independent arm of
5 Congress has reviewed the legislation and they declared
6 it constitutional. Our legislation is modeled after a
7 tax deduction legislation that was upheld by the
8 Supreme Court a couple of years ago, the Buhler Decision,
9 and a recent decision by the U.S. Supreme Court the
10 Witter's Case, seems to build onto that.

11 And that, in a nutshell, is the Adminis-
12 tration's voucher proposal. You'll probably have some
13 questions and I'll be happy to respond to your questions.

14 (Applause.)

15 THE CHAIRPERSON: As I indicated, this
16 is the most controversial feature of our program, so we
17 have made it clear that we would invite a person who
18 was representing a group that looks somewhat askance at
19 this idea, and I'm very pleased to report that we have
20 with us Donald F. Morabito, who is the Assistant
21 Executive Director of the Pennsylvania State Education
22 Association, so he will have equal time to analyze this
23 proposed legislation and the remarks that have just been
24 made. And, then, maybe we can have a little bit of a

1
2 melee here, because I don't know of any subject that
3 produces more heat. My wife is a guidance counselor
4 in a public high school, and this is a rather animated
5 subject around my dinner table.

6 Mr. Morabito?

7 DONALD MORABITO: I would prefer to limit
8 my remarks to a few minutes generally stating the posi-
9 tion of the union I work for and represent, the National
10 Education Association and the state affiliate here in
11 Pennsylvania, the Pennsylvania State Education Associa-
12 tion, and perhaps, react to questions and comments that
13 you might have. I would like to state a few basic
14 points at the outset here that I think are important to
15 emphasize.

16 This is, to us, in the teacher union
17 movement, a question along two lines that must be
18 examined very carefully and one that we continue to
19 examine. The two lines are, first of all, the practical-
20 political line, and I'll talk about that in a little
21 more detail in just a few minutes here, but let me say
22 this about that particular political line.

23 There seems to be, from our point of
24 view, a number of related pieces of legislation being

1
2 proposed around the country in the last two, three,
3 four years, perhaps longer than that in state legisla-
4 tures as well as in the federal Congress. And while
5 we shouldn't overlump things together or overclassify
6 or overgeneralize about matters like this, there is a
7 model education agenda that seems to include matters
8 of home education rights. A couple of years ago, as
9 was alluded to here earlier, proposals for tuition tax
10 credits and now education vouchers.

11 From our perspective, and I'm speaking
12 now still about the practical-political point of view,
13 this seems to be several different ways of proposing
14 aid to and assistance for parents who wish to do a
15 couple of different kinds of things; one, educate
16 children at home; two, get assistance for educating
17 children in private schools; three, from a managerial
18 or funding aspect, diminish the amount of aid that
19 goes to public schools by cutting back on federal and
20 state funds and channeling both federal and state money
21 where possible to private or parochial schools. That's
22 the first general comment.

23 Secondly, if you look away from the
24 practical-political aspect and try to examine what to us

1
2 in the teacher unions is critical today; that is, the
3 funding issue all by itself, one finds that there are
4 various claims on both sides as to some of the figures
5 that were just cited to you: The number of people who
6 attend private schools, the percentage with respect to
7 dollar income of families who send their children to
8 private schools, and the difference between -- and it's
9 a critical different that we must all keep in mind --
10 the difference between private parochial schools and
11 private schools per se, based again on the levels of
12 income of parents who send their children to these
13 types of schools and what the effect of, for example,
14 a five hundred dollar voucher or even a tuition tax
15 credit of three hundred dollars would have for people
16 who send their children to those schools.

17 If, for example, one were to accept the
18 view of private schools presented here by the adminis-
19 tration, you would be inclined to say, well, then, the
20 harm may be minimal. Our facts and figures, which I
21 want to allude to in a few minutes, are different from
22 that. It's our judgment that ninety percent of the
23 children going to parochial school -- or, let me put it
24 another way, ninety percent of the parents who send

1 their children to parochial school are finding that
2 kind of education is less and less available. I don't
3 know the figure about the Philadelphia Archdiocese.
4 My perception, living here the last six years, is that
5 parochial schools are having a difficult time existing
6 and maintaining what they do. And when one examines
7 the dollar issue, one has to look at what these schools
8 are providing. The second part of, if you will, this
9 whole matter of funding private schools has to relate
10 to what they are teaching. Today's society requires
11 different kinds of education, and public schools, as
12 well as private schools, as well as parochial schools,
13 have been asked to change their curriculum -- their
14 curricula dramatically over the last ten to twenty years.
15 Let me be specific about that. You're all aware, I'm
16 sure, of the changes that have occurred in special
17 education. You're all aware of the things that are
18 happening and have happened for several years to
19 vocational education, and you've all seen the effect or
20 heard of the effect with respect to educating handicapped
21 children. These are all not just educational issues.
22 They are matters of Civil Rights. When you talk about
23 the implications for any plan like a voucher plan with
24

1
2 respect to Civil Rights, you have to talk about the
3 special needs of special students in our schools.

4 The private schools, we have found, do
5 not offer vocational education by and large. They do
6 not offer specialty curricula in vocational education.
7 They do not offer the kinds of things that, for example,
8 in Pennsylvania, intermediate units are required to
9 provide in terms of socially and emotionally disturbed
10 children, learning disabled programs and those kinds of
11 programs. If one is to take federal dollars and let's
12 face it, that's what we're talking about here, and
13 diminish the amount of general aid that goes to public
14 schools, channel it to private schools, one is having
15 an effect on Civil Rights by taking away from the
16 possible kinds of instructions in the areas I just cited;
17 special education, vocational education, etcetera, that
18 are available.

19 Thirdly, I want to talk about the
20 constitutional question for just a second, because I do
21 think it's important to at least mention for your think-
22 ing. If public funds are used for private schools and
23 if private schools are parochial schools, and if they
24 are religious schools, and in that category I include

1 Amish, as well as Catholic, as well as Lutheran,
2 etcetera, then the constitutional question of separation
3 of church and state cannot be avoided. Now, again,
4 without tracing a long history, again I'm sure we're
5 all aware that there is a long history of Supreme Court
6 cases on this issue, and up until the 1985 case from
7 Minnesota, the Supreme Court had traced a series of
8 decisions that allowed for specific kinds of aid to
9 private schools restricting what was available. And
10 our view of that Minnesota case is also that you still
11 have a very definite bar on giving grants of aid, giving
12 grants of money to students or their parents in private
13 schools in the form, for example, of the proposal of a
14 couple of years ago of tuition tax credits. Where we
15 stand with vouchers under that decision, I don't think
16 we're really sure at this time. But the constitutional
17 question comes around to subsidizing in effect church-
18 related schools, and I don't think that's an easy ques-
19 tion to get around with any kind of program that puts
20 money or allows credits or gives vouchers to parents
21 who send their children to private schools. And, again,
22 I say that you have to examine figures here. The
23 material we have seen and the research we have done at
24

1
2 the national level indicates that eighty-four percent
3 of private school students attend religiously-affiliated
4 schools. And, we, therefore, with any general kind of
5 aid to parents with students in private schools, would
6 be effectively be subsidizing religious organizations,
7 which is a clear violation of the First Amendment
8 doctrine of separation of church and state.

9 Let me mention some other points that
10 are not, at least to me, in the importance of the first
11 three I cited. I do think, when you talk about an issue
12 like this, you should be aware of the possible effects
13 on the public schools in this country and in the urban
14 public schools of this country. I don't think that any-
15 one -- well, let me rephrase that. If our country's
16 tradition has been free, publicly controlled education,
17 and if we find over the years a pattern of diminished
18 public support for those schools, and if as a result of
19 any proposal, we are going to provide more money for
20 fewer people, then we are going to ultimately damage
21 our public educational system. Again, ninety percent
22 currently of our school children attend public schools.
23 If we are going to encourage people to send their
24 children to private schools, it's going to be damaging.

1 That's a public policy question; not a constitutional
2 or legal question. It is a matter of public policy
3 that we need to examine carefully, because we would be
4 changing the direction of our educational system in
5 all fifty states.
6

7 Next, and this is a policy issue, all
8 citizens through elected school boards or even in major
9 cities appoint school boards by elected officials have
10 a voice in controlling the public schools. If you tax
11 all citizens to provide support to private schools, you
12 are, in effect, removing or I should say removing the
13 opportunity for citizens to have any voice over that
14 educational system. And, again, that's a clear change
15 in the public policy that this country has historically
16 pursued, and we need to examine that.

17 Once again, if legislators decide to
18 do it and if courts uphold that legislation, it won't
19 be a legal and constitutional question. At this stage
20 it's a matter of public policy that has to be looked
21 at and debated before it is accomplished.

22 Finally, the whole area of economic
23 policy in today's context would need to be examined
24 very carefully. At a time when the federal deficit

1
2 is ballooning and when proposed cutbacks and cutbacks
3 implemented at the federal level diminish public school
4 resources and any other drain that would have an effect
5 on educating kids, we would submit is bad public policy.
6 Any proposal that has the effect of ultimately costing
7 hundreds of millions of dollars is going to seriously
8 affect the amount of money available to public school
9 students and to the programs that I mentioned earlier;
10 in particular, vocational education, special education
11 programs, etcetera. So, to that extent, we would again
12 argue that this is bad public policy.

13 Let me just raise a couple of final
14 points here for your consideration and then, I'll try
15 to deal with any questions. If the whole question of
16 the kind of education available to America's students
17 is examined and I would submit to you that it has been
18 examined almost ad nauseum in recent years, and we have
19 read report after report, I think one should think
20 about the recommendations in those reports in terms of
21 educational reform and the general topic of educational
22 excellence, and put this question of vouchers into that
23 application. We don't find in reading reports about
24 the American high school or about the American public

1 schools or about the American educational system in
2 general anybody recommending this kind of plan as a way
3 to deal with whatever problems exist out there in the
4 schools today. I don't want to deal with this lightly.
5 We're limited in time here. I want to mention it and
6 move on, but I do want to say to you that I think it's
7 important and I think it's critical that we think about
8 that. If people are studying what's going on in
9 education in this country and if they're writing reports
10 about that and they're submitting those reports to
11 governors and presidents and Congress and state legisla-
12 tors, and they're not recommending this kind of thing,
13 it behooves us to ask why. The whole question of fund-
14 ing and priorities and how we govern our schools enters
15 into this.

17 Also, the matter of leaving educational
18 funding up to the states and the matter of tax-supported
19 state educational systems is something we need to take
20 a look at from time to time, too. If various states
21 have chosen to fund their schools in various ways, and
22 obviously, they have, and support schools to different
23 degrees and support different programs to different
24 degrees around the country, there is a constitutional

1
2 reason for that, and there are practical legislative,
3 political and financial reasons for that around the
4 country. We would submit that that is done by con-
5 stitutional mandate and over the years by legislative
6 choice in the various states. Any proposal that has
7 nation-wide effect that would impact on that needs to
8 be examined in light of what the constitution says
9 about how states will take charge of school and educa-
10 tion. This, again, is a matter that we should throw
11 out here for discussion and thought, and should not
12 dwell on, but again, I want to say that in our view,
13 it's an extremely critical one.

14 Finally, let me say this: We need to
15 examine facts and figures here and sources for facts
16 and figures, and I think we're having a record that we
17 can enter materials into. If most students in private
18 schools are not in expensive private schools, that has
19 certain ramifications as discussed earlier for a
20 proposal like voucher plans. If, on the other hand,
21 they are, that has certain ramifications and we ought
22 to at least be able to get an agreed upon base of data.
23 I don't have a suggestion as to how we can do that. We
24 need to all put facts and figures on the table and

1
2 examine the sources. If it costs X amount of dollars
3 to send people to public schools and we can agree on
4 that figure, and it costs X amount of dollars to send
5 students to private schools and we can agree on that
6 figure, then we can have agreed-upon facts and figures
7 from which to approach the financial problem, and then
8 we can argue the matters of constitutionality, legality
9 and public policy.

10 I am arguing today, quite frankly, for,
11 I think, a first step here, which is to have the
12 federal government perform the job we all thought the
13 -- for example, the Department of Education was to per-
14 form initially, and that is at least to give us an
15 agreed-upon data base from which to work when we deal
16 with questions like this.

17 I'll stop there and try to answer more
18 specifically whatever questions you may have.

19 THE CHAIRPERSON: Thank you very much.
20 I think we've had an excellent, excellent presentation;
21 short, terse, to the point.

22 CHARLES O'MALLEY: I would agree pretty
23 much with what was just said to you by Mr. Morabito, but
24 I will try to hit a couple of points. First, the

1
2 proposal that we're looking at and most of the voucher
3 proposals that are being discussed do not include any
4 type of provisions for home schoolers. This is something
5 that I think would be very touchy in a state legislator
6 or a governor's office or the U.S. Department of
7 Education were to take a look at home schooling in that
8 way, first because we don't know how many home schoolers
9 there are. It's a very difficult figure to determine.

10 With respect to the special need situa-
11 tion in private schools, again, he is correct. Most
12 private schools don't provide the same types of special
13 needs that the public schools do. Remember, we are
14 limiting our proposal to Chapter One children. These
15 are educationally disadvantaged children that we're
16 trying to give broader opportunity to. Most of those
17 children are in a Chapter One program. Very few of
18 them are both in Chapter One and in Public Law 94142
19 programs, the Handicapped Act program. In speaking to
20 Public Law 94142 in the Education of the Handicapped
21 Act, when I first started with the Florida Catholic
22 Conference as their federal program coordinator back in
23 the late Sixties, one of the most impossible questions
24 I had was trying to get Public Law 94142 services to

1
2 Catholic school children in the State of Florida, and we
3 had a lot of those kids who were eligible for 94142
4 services and weren't able to get it. Unfortunately,
5 the situation is not much better right now as determined
6 by a study conducted by Dick Young about two years ago
7 that pointed out that it's probably the least partici-
8 pated in program by private school children to the point
9 where most private school administrators have given up
10 trying to get services for their children. It's not
11 that they don't have handicapped kids; they can't get
12 the services to provide help to those kids.

13 The same with bilingual education. There
14 are many, many, many thousands of bilingual kids in
15 private and parochial schools around the country,
16 Florida, California, Texas. There are more Hispanics
17 in the private schools in California than there are in
18 the public schools. Now, we're talking about a data
19 base. The National Center for Educational Statistics,
20 as it used to be called, now the National Center for
21 Statistics has come up with some fairly concrete data
22 about private schools, and the Census Bureau has come
23 up with a population survey, and those are where I took
24 most of my figures from as far as the family income is

1 concerned, tuition breakdowns. I've gotten it from the
2 private school administrators themselves. We've spotted
3 private school administrators in the major cities around
4 the country and some of the small cities, and asked them
5 specifically what their tuitions were. I don't want to
6 get into, if I can help it, the cost of education in a
7 private school, because to me, it's an unfair compari-
8 son. And I think it's extremely unfair to the public
9 school. If the public school cost is thirty-two or
10 thirty-six hundred dollars to educate a child, the
11 private school cost at the maximum, and this is strictly
12 a guess, because there is no accurate way of determining
13 it, is somewhere around two thousand dollars, because
14 they don't have the same types of costs that the public
15 schools do. And my sympathy goes out to the public
16 school administrators for trying to handle many of the
17 problems that they are currently handling. But there
18 are no buses for most private schools. That is not a
19 cost as far as administration is concerned. A typical
20 diocesan office in a Catholic school has about five
21 educators in it compared to a central office in many
22 of the major cities. So, I don't want to get into
23 comparing costs, because I think it's an apples and
24

1 oranges type of argument.
2

3 We're talking about constitutionality.
4 As I mentioned, the Congressional Research Service
5 report came out favorable towards our legislation as
6 far as the constitutionality was concerned. The question
7 about the vouchers subsidizing church-affiliated or
8 religious institutions is accurate. I think his figure
9 of eighty-four percent of the students attending religious
10 schools is probably low. The National Association of
11 Independent Schools, which is the major umbrella group
12 for the prep type of school, the independent school, has
13 of the twenty-eight thousand schools nationally only
14 nine hundred and thirty schools and only three hundred
15 thousand students. So, the independent, high-tuition
16 school is in the distinct minority in the private school
17 world and the vast majority are Catholic, christian and
18 Lutheran schools. Those are the bulk of the private
19 schools in this country.

20 When you think of the aid, the federal
21 aid, the state aid, local aid that is going to church-
22 affiliated day care centers, different types of tax
23 credit programs, to private and religious colleges, to
24 religious hospitals and to religious nursing homes, it

1
2 seems strange that once a child puts on a uniform in
3 first grade and takes it off in twelfth grade, that any
4 type of discussion of aid is taboo, but that same person
5 is subsidized by government from the time he's in the
6 cradle to the time he's in the grave, except for the
7 twelve years that he might be in an elementary school.
8 And on that issue, I earlier mentioned that two-thirds
9 of the private school children were in elementary schools,
10 that means that most of those children go on to public
11 schools. There aren't that many private schools around
12 the country to absorb this number of children, which
13 means that in many cases, we're talking about the same
14 child who is wearing a uniform for a few years.

15 I don't like to talk about two separate
16 student bodies, public and private. In many cases,
17 they're one child and there's quite a bit of cross-over
18 between the schools. There's quite a bit of cross-over
19 among faculty between public and private schools.

20 As far as the diminishing of public
21 support is concerned, there was a study started back
22 in the early Seventies, and one of the preliminary
23 findings was the Arlie House Conference back in about
24 1971. One of their findings was that in those

1
2 communities where there is a good relationship between
3 public and private education, those are the communities
4 that are passing bond issues and other types of public
5 school financial programs. The State of Florida from
6 whence I came has a very strong relationship between
7 public and private education. Private school leadership
8 recently came out with a public statement supporting
9 Ralph Turlington, Commissioner of Education's goal.
10 They've come out with press agents, they've come out
11 with statements from the pulpit. Now, they'll do every-
12 thing they can to help the public education because
13 church leaders are primarily that, they're church
14 leaders, and the bulk of their congregation have their
15 children in public schools, and they would be foolhardy
16 if they were to do anything to hurt public education.

17 Let me make just one more comment. The
18 comments about draining on the Treasury, the Chapter One
19 Program would entail no new funds. The Chapter One,
20 the voucher program would just work off the existing
21 Chapter One appropriation. A comment about the reports,
22 the governor's reports, although not dealing with
23 vouchers or tax credits, most of those reports did not
24 address the question of school financing at all, but let

1
2 me end with this: The National Commission of Governors
3 has a full-time person, Dr. Joe Nathan, who is working
4 on nothing but the question of choice.

5 DONALD MORABITO: I can react from here
6 with just a couple of comments. One, as I said before,
7 when the Constitution allows the states to make
8 educational decisions, one must examine a proposal like
9 this in light of what's going on in the state we live
10 in. In Pennsylvania, there is a home-school bill going
11 through the legislature right now, proposed by Repre-
12 sentative Frend of Delaware County, suburban Philadel-
13 phia, and it has to do with the right of parents to
14 educate children in their homes, a right parents already
15 have in this state, with permission from the local
16 superintendent of schools.

17 My only point there was that these things
18 are seemingly a part of a larger legislative agenda and
19 they don't operate in a vacuum.

20 Secondly, those figures, and it's not good
21 to get bogged down in figures, are significant because
22 of what we're talking about in terms of what schools
23 we're going to support with what money. At the risk of
24 confusing, let me just point out some things. The average

1
2 public school expenditure per pupil now is around
3 thirty-two hundred dollars, give or take a few hundred
4 dollars. This data now is like a year old. Parents
5 who receive vouchers to enroll their children in a
6 private school, the -- if that occurs under any plan,
7 you must take into account what the expenditure is in
8 a private school generally as opposed to public schools,
9 and you must take into account what the levels of income
10 are of people who send their children to private schools
11 as opposed to public school, and what the implications
12 are of that. And when I say you must, I mean in terms
13 of the topic of this conference, what are the implica-
14 tions for Civil Rights.

15 According to the United States Bureau of
16 the Census, the median tuition level at all private
17 schools in 1982, and admittedly, this is four years old,
18 was a thousand, twenty-nine dollars. The median for
19 church-related schools was less than that, it was eight
20 hundred and twenty-seven dollars. Now, that alone does
21 not mean a whole lot, because obviously it masks a
22 tremendous range of expenses.

23 The National Association of Independent
24 Schools, the organization mentioned earlier, says that

1
2 the average tuition of its member institutions is
3 twenty-two hundred to thirty-one hundred dollars a year
4 for elementary school students, and thirty-eight hundred
5 to six thousand dollars a year for secondary students.

6 If under legislation you would make
7 vouchers available to parents of both public and
8 private school students, you'd have to think about the
9 actual cost of attending a private school, which you
10 could reasonably expect would be substantially more
11 than the voucher. You then, by implication, reduce the
12 choices available to poorer families who cannot afford
13 to pay the supplemental cost. That's the implication
14 of the amount of the voucher, how much the tuition costs
15 at private schools in general versus public schools.

16 Without getting bogged down in that, I made
17 argument earlier that under our current system with the
18 Constitution leaving the decision of control of educa-
19 tion up to the states, that means the amount of money
20 spent, and in the '83-'84 school year, as of two years
21 ago, the average range from two thousand, thirty-four
22 dollars per pupil in Utah to six thousand, three hundred
23 and seventy-eight dollars per pupil in Alaska -- now
24 Alaska, of course, those are twenty percent inflated

1
2 figures at least because of the cost of living in
3 Alaska -- what I'm saying is, that's because of the
4 present setup constitutionally which allows the states
5 the right to control their educational systems and the
6 funding of education. Any proposal such as this would
7 of course significantly alter that.

8 The implication for Civil Rights is that
9 if you're going to provide people with aid to send
10 children to private schools, and again, if we could ever
11 agree on the number of schools and what their tuition
12 costs are and all that sort of thing, you're going to
13 in effect, from our point of view, offer more privileges
14 to the privileged, because private school enrollment
15 is highest among northern white and wealthy families.
16 Private school attendance rates for students from
17 families with incomes of twenty-five thousand dollars
18 or more are about five times higher than the rates for
19 students from families with incomes of less than five
20 thousand dollars. They don't operate this in a vacuum.
21 It's a reverse Robin Hood approach. Ultimately, you're
22 going to aid the more well-to-do parents of private
23 school students while undercutting the funding of public
24 schools. The reason I mentioned the reports are that

1
2 that's directly contradictory to the recommendations of
3 the National Commission on Excellence in Education.

4 Private schools get aid now, as was
5 mentioned earlier, fifty-eight dollars per pupil, from
6 various federal programs. To go back to what I thought
7 were significant differences, only two point seven
8 percent of all religious schools provide programs for the
9 handicapped. Remember, I'm arguing that eighty percent
10 of all private schools have religious affiliations.
11 Only three percent of all non-public schools provide
12 vocational education programs. Less than five percent
13 of all non-public schools provide any services at all
14 to economically disadvantaged students. And I think
15 those are significant figures because they have ramifi-
16 cations. It means we're going to ultimately set up more
17 privileges for the privileged, and we're going to create
18 ultimately two tiers of schools in this country.

19 THE CHAIRPERSON: It's your turn. I
20 should say this, Donald, that although the statement
21 here is called Educational Vouchers, Implications for
22 Civil Rights, I think the most immediate issue is the
23 question of educational vouchers for the poor, which is
24 now being proposed, so that would be a somewhat different

1
2 issue.

3 DONALD MORABITO: Well, yes. My point,
4 though, however, was that -- and I recognize that. I
5 understand the proposal. My concern, however, is how
6 can you constitutionally provide anything for a class
7 of people -- my whole argument is that you must ultimate-
8 ly look at all levels of income, all citizens, and people
9 in both public and private schools, I think, in order
10 to be constitutional.

11 THE CHAIRPERSON: This is the argument --

12 DONALD MORABITO: And as I said, ulti-
13 mately if the law is passed and the Supreme Court upholds
14 it, that's not the issue. It is the issue now.

15 THE CHAIRPERSON: You go, or are you all
16 deadened by the torrent of statistics, percentages and
17 the rest.

18 MALINDA SILER: You mentioned, I believe,
19 and I might have misinterpreted several of your comments,
20 that the educational vouchers could be used to transfer
21 from a public school, one public school to another
22 public school if the parent of that child felt that a
23 change of environment would be better.

24 THE CHAIRPERSON: For the purpose of

1
2 this discussion, could we add educational vouchers for
3 the poor, because that's what the issue is at the moment
4 on the table. Is that fair enough, Donald?

5 DONALD MORABITO: Yes.

6 MALINDA SILER: What purpose would that
7 serve?

8 CHARLES O'MALLEY: Let's take an area
9 like Philadelphia. I don't know any demographics of
10 Philadelphia, but let's say that there's public school
11 fifteen, public school nineteen and public school twenty
12 all within a same general vicinity, and public school
13 fifteen is having some difficulties. The Chapter One
14 teachers are not doing the job that they should be
15 doing, or there is an environment in there in which the
16 child is finding it somewhat difficult to learn, whether
17 it's drugs or lack of discipline or whatever it might be,
18 safety. But two blocks or three blocks down the road,
19 nineteen has a principal like that man that was high-
20 lighted in Readers Digest, Clark, I think, the man with
21 the bullhorn, who won't tolerate any type of fooling
22 around or drugs or anything of that nature. There's
23 a strong sense of discipline; there's a strong sense of
24 community. The parents would like their children to go

1
2 to that particular school, and our hope is that the
3 school board would allow that child to go to public
4 school nineteen and continue to receive the Chapter One
5 services over there.

6 If, however, there aren't any schools
7 in that immediate area that the parents think would do
8 the job, whether they're private schools or public
9 schools, but there is a good public school in Delaware,
10 and again, I don't know the geographics, I'm just kind
11 of throwing names out here, but it's about a twenty-
12 minute ride from that particular home, then, upon agree-
13 ment, and this can be worked out and is being worked
14 out in some states, the child could go to that public
15 school and the state money could also follow it. There
16 are a lot of logistical problems, grant it. But if
17 there's another school district within the City of
18 Philadelphia where the schools are better, then the
19 child could go to that particular public school if the
20 parent so desires.

21 So, the options are to go to the public
22 school within the district or a public school outside
23 the district, or a private or parochial school.

24 MALINDA SILER: Is that part of the five

1 hundred and fifty dollar voucher?

2
3 CHARLES O'MALLEY: Well, in Philadelphia,
4 that would be the amount of the voucher, right, because
5 that's what the Chapter One application is.

6 MALINDA SILER: That money could be used
7 for transportation and other costs?

8 CHARLES O'MALLEY: Right.

9 JOHN GREEN: You mentioned a strong Civil
10 Rights implication in the legislation. What is there
11 in the proposal to prevent a school district from
12 becoming racially homogeneous and then we have mixing
13 after the academic work where the real interaction
14 occurs?

15 CHARLES O'MALLEY: We're dealing with
16 Chapter One children, and we're dealing with only about
17 five million total Chapter One children as opposed to
18 some fifty or fifty-one million children attending
19 public and private schools nationally. So, it's a very
20 small percentage of the total school population, and
21 about fifty percent or forty-seven percent, I think at
22 last count, of these Chapter One children were minority
23 children.

24 If the parents decided -- the black

1
2 parents, for example, or Hispanic parents, decided they
3 did not like the particular public school that their
4 children were currently attending, they would look for
5 the best school; not one that is, perhaps, an all black
6 school or an all white school. They would look for the
7 best school. The same thing would happen with a white
8 parent who is in the inner city area or in a target
9 school.

10 JOHN GREEN: I'm thinking about what has
11 happened in cities where you had a desegregation program
12 and you had private schools established for the purpose
13 of avoiding integration.

14 CHARLES O'MALLEY: If there is court
15 ordered busing, then it would be up to the federal judge
16 in that case to decide if the voucher program could go
17 in effect, and the judge would have to decide if the
18 voucher concept would be workable in that particular
19 community.

20 The second part of that is, because of
21 the large number of minority children already involved
22 in Chapter One, if they decide they want to go to a
23 segregation academy and they're admitted, that segrega-
24 tion academy is no longer a segregation academy. Grant

1
2 it, there will only be a couple of minority children
3 there, but dealing with the -- back when I was teaching
4 in Fort Lauderdale, for example, back in 1963, I was
5 teaching at a Catholic high school, there weren't any
6 black children in that high school. We had our first
7 student come in mid year in 1963, one child. Now the
8 school is about fourteen percent black. Now, I don't
9 know how rapidly the enrollment grew, but when I was
10 with the Archdiocese of Miami, we worked out a program
11 with a group called NARAD where for every minority
12 child coming in as a freshman, we were able to get some
13 kind of a scholarship for a graduating senior, and that
14 certainly provided a good stimulus to that school to
15 integrate.

16 I would see the voucher as breaking down
17 some of these segregation academies, which I think is
18 an ultimate goal of the administration. And, secondly,
19 there aren't that many segregation academies left,
20 fortunately. The bulk of the children attending private
21 schools attend schools with open admission policies.
22 Even the christian schools started out fifteen, twenty
23 years ago in the South, now have very strong Civil
24 Rights language in their membership requirements.

1
2 Pensacola Christian, for example, started out about
3 fifteen years ago, was an all-white segregation academy.
4 It's about twelve percent black right now. That's what
5 I see happening.

6 DONALD MORABITO: At the risk of prolong-
7 ing this particular point, let me just make two points.
8 One, language with respect to Civil Rights, if passed,
9 needs to be enforced. And as I said earlier, you cannot
10 look at this thing in a vacuum. You have to look at
11 what is the practical effect of it. If there is a
12 voucher plan and if there is Civil Rights language,
13 given the public statements of this United States
14 Attorney General and the record of this particular
15 administration, one has to at least think about whatever
16 the language says how it will be enforced.

17 Two, again I would say, I think we have
18 to keep in the back of our minds the fact that when you
19 create a plan for a class of students, there is a con-
20 stitutional question involved, and I don't think we
21 should lose sight of that.

22 THE CHAIRPERSON: Aren't there so many
23 programs, federal programs that divide people into
24 classes; income levels and so on?

1
2 DONALD MORABITO: If you're arguing that
3 there are forms of aid, yes, that talk about the
4 particular needs of students. We're talking about a
5 financial need, which is a different matter.

6 BENJAMIN STAHL: I'm a great believer
7 in arguments on the table, but a new idea is not
8 necessarily a good idea. Public schools of Pennsylvania
9 have been here since the working man's party pushed it
10 in 1932, and I think that it's a basic part of American
11 democracy. And I think you have to give support to
12 that concept, even though we're very critical of how
13 this school system works and that system, that board
14 of education and taxation, etcetera.

15 On this idea of vouchers for Chapter
16 One students, it seems to me to be a new one. It's a
17 cutback of vouchers for all students. I'm concerned,
18 and I second the viewpoint that the new ideas coming
19 from the Attorney General and even the Human Civil
20 Rights Commission bother me as being retroactive steps
21 in the field of Civil Rights. I'm concerned, if you
22 move a foot in to get the voucher system, because it's
23 narrow, it may be more acceptable. It's talking about
24 the minority and poorer kids and so forth, and it's less

1
2 money. You talk about every student who wants a transfer
3 gets five hundred dollars or a thousand dollars. That's
4 a lot of money.

5 We've had in the last several years cut-
6 backs in programs for Chapter One kids directly that
7 affected them adversely, head start programs, school
8 lunch programs, loans for college kids and so on. Is
9 this to make up for that cutback of federal funds? Are
10 these new federal funds? There's no cost involved?

11 THE CHAIRPERSON: They're using the same
12 money that is presently going into the Title One
13 programs.

14 BENJAMIN STAHL: Is there a guarantee
15 that the private schools will be using that money for
16 the purpose that it's now set up?

17 CHARLES O'MALLEY: Okay, let me answer
18 that last question first and try to go back on the other
19 two.

20 There is no guarantee that the private
21 school will use the money for the same purposes, the
22 Chapter One purposes, that Chapter One currently funds.
23 The idea of Chapter One was not, however, to set up an
24 institution of remedial teaching programs. The idea of

1 Chapter One was to find some way of providing compensa-
2 tory education, a better education for children. And
3 in some cases, compensatory education may not be the
4 answer, but change of environment might be the answer,
5 and if the child does better in school, whether it's
6 Chapter One or through vouchers or through the parents
7 moving to the suburbs, then I think that's really what
8 we're after. We're not trying to protect an institution
9 per se.

11 As far as the public schools in the State
12 of Pennsylvania being part of the democratic process,
13 the American democracy, before 1832, many states funded
14 private and parochial schools. Private schools were the
15 schools around the country. They've always had a good
16 tradition of community service, and particularly in
17 recent years here in Philadelphia and your major cities,
18 the Catholic and other denominational schools have
19 educated thousands of children not of their faith at a
20 very low cost, in fact, at the scholarship level, in
21 order to provide a community service.

22 So, the private schools, again, are still
23 maintaining a very high level of contributions to Ameri-
24 can democracy.

1
2 And, lastly, when I got my job with the
3 administration, I was a registered Democrat. I'm not
4 an ultra conservation Republican. I was runner-up for
5 the position back during the Carter Administration. I
6 had the strong support of the Democrats in Florida, and
7 sometimes I guess I get discouraged because I feel we're
8 damned if we do and we're damned if we don't. We're
9 putting forth proposals sincerely that hopes to help
10 low-income, educationally disadvantaged children, and
11 we're called hypocrites because some people feel that
12 we're trying to pull something over somebody's eyes.
13 But if we don't put it forward, then we're called worse.
14 I say, give it a chance. As William Ransbury, the
15 columnist said, give it a chance. It sounds like a good
16 proposal. We're talking about low-income, educationally
17 disadvantaged kids, many of whom are minorities. We're
18 talking about giving them the best educational opportu-
19 nity we possibly can, whether it's in a public school or
20 in a private school. There will be no exodus from public
21 schools. Most of the public schools are doing a good
22 job.

23 Minnesota had a tax credit program in
24 the early Seventies for three years, and the three years

1
2 of that program, these were tax credits going to private
3 school parents, there was an actual decline in the
4 number of children attending private schools and an
5 increase in the number of children attending public
6 schools. There was no exodus. And I don't see any
7 exodus coming forward with this or with our tax credit
8 proposal if that's enacted. There are too many good
9 public schools around. Parents can select schools.
10 They've got the know-how; they've got the ability, even
11 the low-income parent, they know what they're doing
12 or they wouldn't be voting for the people that they
13 sent to office.

14 DONALD MORABITO: I certainly can't react
15 to sincerity and honesty. I don't doubt the sincerity
16 of the administration or Mr. O'Malley or the proposal
17 or the attempt to do good. I just think we have to
18 look at the ramifications and the possible results,
19 because you have to examine what effect that would have.

20 If there's no drain of students from
21 public schools, admittedly an alleged or a suggested
22 loss of revenue to the public schools and support for
23 the public schools, that would not happen, that's right.
24 We don't know that, however. I mean, you can only

1
2 analyze in terms of the right of choice. If people are,
3 for example, going to get enough of a credit to move
4 children from public schools to a private school some-
5 where, if you took a state like Indiana, you could --
6 which is a medium size state, if you had a significant
7 number of students move from the public schools to
8 private schools, the next effect in Indiana, based on
9 the subsidy system there, which isn't entirely different
10 from Pennsylvania, public schools are given money from
11 the state based on not just the expenditure per pupil,
12 but the attendance of the pupils in the public schools,
13 and obviously if you remove students from public
14 schools, you're going to remove income from the public
15 schools, making it harder for them to do their job,
16 so that even though the intent is not to harm public
17 schools, the net effect over the long haul could.

18 I guess the other side of the argument
19 is, well, then if everybody is exiting to better private
20 schools, that's good. I'm not sure that's going to be
21 the result.

22 THE CHAIRPERSON: I want to ask that
23 question. It's always fascinated me. I'm wondering
24 about this idea as a kind of use of a -- a competition

1
2 with the public schools. In other words, if -- the
3 only reason anyone would leave the public school to go
4 to another public school or another parochial school is
5 because they believe they're getting better education.
6 If, indeed, the public school is serving properly or
7 at least it's doing a good job, no one is going to leave
8 it to take -- to go to a suburban school or to a
9 parochial school. If, indeed, the public school or
10 certain public schools, let's say in ghetto neighbor-
11 hoods, find themselves with an exodus, doesn't that
12 force the public school system to try to do something
13 about that in a much more concrete systematic way?
14 Doesn't it move up against that sort of entrenched
15 civil service kind of mentality that says, you know,
16 whether we do a good job or don't do a good job, we
17 still get paid? In short, isn't this idea possibly
18 introducing an element of competition that might
19 improve the quality of public education, rather than
20 leave it in the hands of a civil service that basically
21 is not challenged?

22 DONALD MORABITO: I would disagree with
23 the premise of the question. I don't think public
24 education today is in the hands of a civil service that

1
2 is not challenged. I mean, my dealings with public
3 school teachers and administrators have convinced me
4 over the last fifteen years that they indeed do feel
5 challenged, and that they are indeed responding to the
6 various criticisms of the public schools. Not to avoid
7 the question, but generally competition is healthy,
8 certainly. I don't think I would in theory argue with
9 that. My concern would be more of saying to you and
10 to anyone else considering a proposal like this, it's
11 the effects of the particular proposal that we should
12 try to study and analyze. If you instead provided
13 grants to public schools to improve their performance
14 on test scores, for example, why is that, for example,
15 not a better expenditure of public funds than this
16 proposal? I don't know the answer to that. If you're
17 going to suggest -- you know, I have a son graduating
18 from a public high school this year. He's a horrible
19 speller. Do I want a voucher system so that I can send
20 my kid to a private school where they happen to have a
21 reputation for teaching spelling? Maybe I do. I don't
22 know. My whole point here, however, and that's why I
23 go back to my earlier remarks, what we ask the public
24 schools to do is what we're not asking private schools

1
2 to do. I agree with Mr. O'Malley's earlier comment
3 about there's a role for private schools in our society
4 and there's a role for public schools. I'm saying, I
5 don't think we need to expand the role of the private
6 schools at the expense of the public schools. If a
7 public school -- public school system has to provide
8 vocational education, education for handicapped children,
9 etcetera, etcetera, and a private school doesn't have to
10 do that, I don't want my tax dollars to subsidize that
11 private school at the expense of the public schools.

12 CHARLES KENNY: I have a two-fold ques-
13 tion. If the notion of Civil Rights is government
14 intervention and political participation, and if the
15 minorities are unable to have an option to participate
16 in private schools, my question to you is, what is wrong
17 with government providing a system where minorities or
18 pool people could have a diversified education?

19 DONALD MORABITO: I guess if I accept
20 your premise, which I'm not sure I do, my answer would
21 be there's nothing wrong with that. I think, as I said
22 before, however, the proposal doesn't operate in a
23 vacuum. I don't know that the net result, and it's hard
24 to know without trying it, as Mr. O'Malley is suggesting,

1
2 and I agree with that, but I don't know that the net
3 result of a voucher system is that we're going to give
4 poor students and minority students a chance to go to
5 better schools. That's what you seem to be suggesting
6 by your question. If that were the case, I guess my
7 answer would be yes, let's try it. I'm not so sure
8 that's going to be the result, because as I said before,
9 you have to think about all these other factors that
10 enter into the picture.

11 Let's supposing Mr. O'Malley's premise
12 was right, that all we're going to do with something
13 like this is have parents enabled to look at, here's a
14 principal doing a good job in a building within twenty
15 minutes from my school. I admit that sounds desirable.
16 As a parent, I might want that option. I'm not so sure
17 that's the case. My point is, maybe you should take
18 tax dollars and say to the principal of the school where
19 I would submit you have dedicated, competent professionals
20 who maybe need an incentive that they don't now have,
21 and say, look, here's Dr. Jones down the street doing
22 this. Why don't you try that in your school, and here's
23 some money to help you do it. Here's some government
24 help. We're going to send you a staff person one day a

1
2 month to help you implement this kind of program. I
3 might think that's a better expenditure of tax dollars
4 to accomplish what you're discussing.

5 MARSHALL MURRAY: I view this voucher
6 system very skeptically. I feel it's opening up that
7 old proverbial can of worms. I believe that a person
8 has the right to go to parochial school and private
9 school. Ever since the Act of 1642 and 1647 which
10 began public education in the State of Massachusetts,
11 okay, the idea caught on and just spread around and so
12 forth, so we have public education in all of the states.
13 I believe in that, but to me, a private school,
14 parochial or whatever, is a school of protest. When the
15 people go to that school, they are protesting against
16 what the majority of society has, wants to do. I believe
17 they have a right to protest, but I strenuously object
18 to paying for that protest.

19 Another thought that you mentioned, Mr.
20 Friedman, your name is Murray on the front and mine is
21 Murray on the other end, why would they transfer to
22 another school? I could think of another reason. They
23 could transfer to another school so as to prevent
24 education. To me, this is just another ploy, another

1
2 effort to enable certain groups to prevent integration,
3 and I feel that as it goes along, it's just simply
4 opening a door that's going to weaken the the purpose
5 of the whole Civil Rights movement. The implications
6 for Civil Rights to me, I think, is a very dangerous
7 omen.

8 DONALD MORABITO: There's private dollars
9 for private schools, and public dollars for public
10 schools. We're all taxed; not just people who have kids
11 in schools, to pay for public schools. If you want to
12 send your children to private school, you have an option,
13 but you also have the option to pay for it and that's
14 the way it ought to be. That's what we think the
15 constitutional convention intended and Jefferson
16 intended in the Fourth Amendment.

17 CHARLES O'MALLEY: Two items; one, back
18 in 1925, the Supreme Court with the Pierce versus Society
19 of Sisters said that private and parochial school
20 education is a legal, valid form of the child complying
21 with the state's compulsory attendance law, which means
22 that that child going to school is fulfilling state
23 responsibilities or cannot be jailed or the parents
24 could not be jailed for truancy.

1
2 The private school or the parochial
3 school is as much a part of America as the public
4 school is. The idea of choice that you're concerned
5 about, the idea of fostering segregation in many of the
6 schools, I don't think with this particular proposal,
7 and I'm not speaking to other types of voucher proposals
8 in certain areas. I'm not going to get into that. The
9 Chapter One program deals with low-income, educationally
10 disadvantaged students, most of whom are minority
11 children. These are the children that we're hoping will
12 use the voucher, if they wish, to go to a different
13 public school or to a different private school, and in
14 that way, they're fostering integration if they're going
15 into private schools. It's not that -- the idea of them
16 going to an all black school, if that's what their
17 parents want, that's going to be their choice. There
18 are some all black private schools. The Catholic
19 schools in the inner city for the most part are all
20 black, and most of those kids are non-Catholic, and
21 they're providing that as a community service. Why are
22 those thousands of children -- I think it's the ninth
23 largest school system in the country, if you were to
24 rank it among public school systems as well. Most of

1
2 them are in the minority and non-Catholic. Seventy-
3 seven percent of those schools charge five hundred
4 dollars or less.

5 The other aspect of choice, when we're
6 talking about middle income parents and upper income
7 parents, they don't have to worry about sending their
8 children to a private school, even though they have the
9 money. They hop in the station wagon and go out in the
10 suburbs and build a new public school that started off
11 all white, but that's essentially a semi-private school.
12 Why keep the rest of the minority population or the city
13 population locked in the same school when the wealthier
14 parents can get in their car and move out of the area.
15 This is what we're saying, give the low-income kids a
16 chance. It does give them more opportunity than they
17 have right now. That's what we're interested in.

18 MARHSALL MURRAY: The Board of Education
19 has a right to allow a parent to send his or her child
20 to another school for particular reasons. I think they
21 could do that without giving vouchers to allow a person
22 to go to another school. In a parochial school, once a
23 child is denied admission to a parochial school, the
24 public school has to take them.

1
2 CHARLES O'MALLEY: There are many children
3 in private schools now who were booted out by public
4 schools. If you check the data, there is a fairly high
5 number of handicapped, learning disabled, some autistic,
6 different types of handicaps which means they were
7 trouble makers in other private schools or public schools.
8 The parents have the right to go to their school board
9 and ask for improvement in their schools or ask for the
10 permission to move their child to another public school.
11 I think that would be great. That's what some of these
12 public school voucher programs you're talking about do.
13 I think that would be ideal.

14 As long as we're talking voucher, we
15 should broaden it a little more. But, again, I don't
16 see that many children going from public schools to
17 private schools. What we will see in many cases with
18 the voucher are those children who are currently attend-
19 ing a private or parochial school who are eligible for
20 Chapter One, now that they have the choice to go to a
21 public school outside of their own school district,
22 they'll withdraw from the private school and go to the
23 public school, because they'll still have to pay tuition
24 in some cases. If they can get a better education at

1 the public school, many of them will do it.

2
3 THE CHAIRPERSON: Well, I think that we
4 may have run out of -- you have another one?

5 CHARLES KENNY: There's a perception in
6 the community that going to a private school, that you
7 get a better education, and you'll be better socialized;
8 whereas, in the public sector, there is a notion that
9 you're not going to get a good education. Our school
10 system here is supported through taxation. My question
11 to you, then, is that the poor basically sustain their
12 education which seems to me it's a bad investment.
13 Nobody wants to take tax dollars and pump it into a
14 school system that's not producing. How do you dis-
15 charge the issue of taxation, taking those tax dollars
16 and giving that person that option, and doing away with
17 the negative that the public school system has?

18 DONALD MORABITO: The negative is being
19 dealt with in two ways. You have in a number of school
20 districts more progressive leadership in the last four,
21 five, six years than you've ever had before. There's
22 been a tremendous -- I can only refer here to Penn-
23 sylvania, because that's all I'm familiar with. In
24 Pennsylvania there's been a tremendous turnover in

1
2 school superintendents in our five hundred and one
3 school districts in the last five to six years. The
4 net result, we think, and when I say "we" now, I mean
5 PSEA, and we are the state's largest teacher's union,
6 and we have four hundred and eighty some of those five
7 hundred school districts that we bargain for, our per-
8 ception is that the leadership of the schools has
9 dramatically changed in the last five or six years and
10 that there has been a great deal of response to the
11 concerns of the public such as the declining test scores
12 and things like that. With declining enrollments, the
13 average class size, if you will, and that's not an
14 accurate thing to look at generally, but for the purpose
15 of a general discussion I think we can, that average
16 class size has gone down over the years giving teachers
17 the opportunity to work with students on a more indivi-
18 dualized basis. Now, there are teachers who will tell
19 you, you know, that's not true in certain areas. There
20 are large social studies classes, etcetera. But the
21 amount of student load has decreased. If I can just
22 focus on those two things.

23 The combination of spending those tax
24 dollars more per pupil as the years go by on fewer

1
2 pupils, even though we've had fewer teachers, and with
3 more progressive leadership, and I left out school
4 board. As I said, administrators have changed; so has
5 school boards dramatically in the last five or six
6 years. In this state, our perception is that the public
7 schools have been much more responsive to what parents
8 are saying in terms of wanting improved discipline,
9 wanting to share in the governments of the individual
10 schools, wanting to improve test scores, and that we
11 have seen that start to occur; that is, that test scores
12 are improving, that parents in this state are indicating
13 more satisfaction with the public school. PSEA, for
14 example, takes a poll every year, and we just completed
15 one, in which we survey parents' attitudes about the
16 public schools, and their parental attitudes have
17 changed dramatically in the last five or six years in
18 terms of their satisfaction level with the public
19 schools. So, I think that's going to be a long process.
20 I don't think that's going to change overnight, but I
21 think as the schools respond to what parents are saying,
22 and as the schools respond to the problems like declining
23 test scores, etcetera, I think that perception will
24 change.

1
2 The other comment I would make is that,
3 again, if we accept the premise that all we're going to
4 do is give students the chance to march from one public
5 school to the other looking for a better public school
6 not too far away, it's hard to argue with that premise.
7 I'm not going to argue that that isn't a desirable
8 outcome here in Philadelphia. I just don't think that's
9 what this proposal is going to do.

10 THE CHAIRPERSON: Gentlemen, thank you
11 very much. I think we've had an extraordinarily inter-
12 esting exchange on an extremely high level on both of
13 your parts. I'm only sorry there were not larger
14 numbers here to have engaged in this debate. I console
15 myself with the fact that we will have a record of this.
16 We will be making this record available to others, and
17 in addition, it is our hope that the entire approach that
18 we used today, the exploration of new strategies for
19 Civil Rights, will be something that will be placed on
20 the agenda of the U.S. Civil Rights Commission so that
21 they may have an opportunity to look to a number of
22 these ideas which at least are advanced, however you may
23 feel about them, as other ways of trying to improve the
24 problems of minorities in American life.

1
2 So, thank you very much for coming
3 and for your patience, and we will now adjourn our
4 discussion.

5 ---

6 (Forum adjourned.)
